Foreword

The 1959 edition—the thirteenth in our annual series—offers the greatest advance in our aim to provide timely, interesting, and important reading material.

Although the reference content of the Information Please Almanac has not been reduced, the greatest emphasis of the 1959 edition is on subjects that are related to daily news headlines and active personal and social interests.

We have successfully performed what we believe was a formidable task. In our section "World Politics Today," we give the most up-to-date story of 82 countries of the world in addition to a background history of these countries.

Willy Ley, the outstanding space expert, again contributes a comprehensive story on the success, failure, and promise of moon travel.

We are proud to present a new first in our section, "Follow the Music," by Irving Kolodin, music editor of the "Saturday Review" and annotator of the New York Philharmonic, which we are confident will increase the pleasure of record-listening for you.

Another major feature included in this edition, which should be of considerable value to our readers, is an authoritative and interesting section on "Your Health and Long Life."

All of the articles listed here will make good and informative reading. We urgently suggest that you read all of these illuminating articles before you put the Almanac on your shelf for occasional reference.

We are very grateful for our readers' response in spotting errors in the 1958 edition and we should like to repeat the following paragraph used last year:

"We like to think ours is the perfect book since we have gone to great pains to avoid errors. All material is carefully scrutinized many times. You, though, may spot an error that everybody missed; if so, we would like to hear about it. We promise to correct the error and this, we gratefully advise, will be your only reward."

Comments on what sections and material you find interesting would also be welcome. Your opinion will help us produce the perfect book for your requirements.

OPERATION NEWS

Past—Present—Future

Informed citizens are the strength of the nation. Only an informed people can make the necessary right decisions. Time and time again the people have demonstrated that they were better qualified to meet issues and make decisions than their government.

To be informed there is no substitute for reading and study. Publishers, in every media, do a good job of keeping us informed. Our daily newspapers are, in a sense, our contact with the world. It is essential to make the reading of newspapers an important habit for the entire family.

To help you get more out of your newspaper reading, we have designed and developed "Operation News." This section provides you with background on important news stories.

We strongly urge you to use our "Operation News" section: check the table of contents below. Here we deal with the most vital questions you will be reading about in the newspapers for many months to come. We suggest you keep the INFORMATION PLEASE ALMANAC handy when you are reading a newspaper. You will definitely find it helpful.

LIGHT AND SERIOUS TOUCHES OF 1958

by MARCUS DUFFIELD

JANUARY 1958

AS THE BABY New Year began, the Census Bureau came through with startling baby news. One had been born every $7\frac{1}{2}$ seconds in 1957, so we started 1958 with 3 million more population. Well, we needed 3 million new little customers for baby carriages and diapers, to give a boost to our recession-stricken economy. Rueful stock-market investors, making a New Year's check on how they were getting along, found that on the average they had suffered in 1957 a paper loss of one-fifth of their dollar values. . . . However, new ideas always were bobbing up, and who cared if some of them were a bit cock-eyed? You could walk on water, if you felt so inclined, with a new product put out by a Massachusetts firm—water shoes named "Ocean Strollers." Or, if you happened to be a skinny guy, you could buy "Pool Pacers." And for those who wanted to avoid water, a New York firm brought out transparent plastic pants for men. You wore them over your regular pants, of course, fitting them a raincoat for legs. . . . Statistic for the month: 6,000 dog bites invaded the legs of mail carriers in 1957. The Post Office got annoyed and ruled that if your dog has an insatiable appetite for mailmen's legs, you darn well pick up your own mail at General Delivery.

FEBRUARY 1958

A SIGH OF RELIEF swept the nation and the free world. Russia wasn't the only country which could fire a satellite into orbit around the earth. It had been four months since Russia's Sputnik I, and three months since Sputnik II. Now, at last, Sputnik had a comrade in the heavens—a miniature moon named Explorer, sent up by the United States Army. We could do the trick, too. . . . On the ground, "rocket fever" was sweeping the teen-age set in our country. Kids were building and firing their own rockets. Some fizzled, some exploded (occasionally with dire results) and a few soared into the sky. In Houston, Texas, a group of high-school boys sent a \$10 rocket two miles high at a speed of 700 miles per hour. . . . We were getting so science-minded that International Business Machines brought out a mechanical monster that knew history. It was asked what happened in A.D. 30, and it spit out the answer in two-thirds of a second: "Salome asked for and obtained the head of John the Baptist." . . . Moreover, you could buy your toothpaste, or honey, or syrup in

cans containing a speck of nitrogen so they would shoot the stuff at you in a polite way.

MARCH 1958

AS WE APPROACHED spring, the women went mildly crazy (in the opinion of their menfolk). They wore dresses shaped like gunny sacks, which most men felt were more suitable for enclosing potatoes than for the female form. Then there were variants such as trapezes and chemises, which also gave rise to male maleases. Wrote fashion expert Tobe: "My own little nieces and the daughters of my friends all tell me that their social status at school is now determined by how many chemise dresses they have." . . . And speaking of the styles of the 1920's, there was an effort to revive the black velvet band around the forehead. Tiffany's brought out a model studded with diamonds from ear to ear—a real bargain at around \$175,000. . . . But good old Montgomery Ward stuck to the practical. Its spring catalogue offered farmers a three-pound package of 5,000 bees, listed as being "strong, gentle, easy to handle." No drones, fertile queen bee included, all for \$5.45. . . . In Russia, Nikita S. Khrushchev showed his practical side this month. He fired Marshal Nikolai A. Bulganin as Prime Minister. "Our dear Nikita," as he was called in the Supreme Soviet, took over the job as heir to Stalin.

APRIL 1958

GREAT DEBATE of the month: Are U. S. automobiles becoming mechanized mastodons, gaudy with chrome? "Sillier and bigger," commented Walter Reuther, president of the United Auto Workers. Said Harvard Economist Sumner Slichter: "Weird collection of headlights, fins, tails, wings." Maybe they were right, for small, simple European cars were flooding into the American market as never before. . . . Another question: Should the Army have drafted Elvis Presley, rock-'n'-roll idol, as a \$78-a-month rookie and made him trim his famous locks and leave behind his four Cadillacs, his Lincoln and his singing career? His manager said it would cost the government \$500,000 a year in lost income tax; but the Army just didn't care. . . . A devotee of much more serious music caused an international stir. Right in the midst of the East-West bickering over a summit conference, a 23-year-old pianist from Texas, Van Cliburn, went to Moscow and walked off with first prize in the Soviet Tchaikovsky Festival, in which 50

planists from 19 countries were entered. . . . Here at home, cats came into their own. The Animal Insurance Co. of America offered life insurance on pedigreed felines (no lions, tigers, jaguars need apply) in amounts ranging from \$100 to \$13,000.

MAY 1958

THAT RECESSION still was haunting us. Unemployment was over 5 million. Eminent men were urging tax cuts to give the economy a shot in the arm, but Eisenhower said no. . . . Among hardest-hit cities was Detroit, where industry was down 33% in the first four months of the year; passenger-auto output was 875,000 below comparable 1957 date. Detroit radio and TV had a forty-five-voice chorus singing over and over, day after day: "Buy days mean pay days. And pay days mean better days. So buy! Buy! Something you need today!" . . . The recession caused a slowdown in marriages—down about 10% below a year ago—which was bad news for the housing industry, furniture, etc. . . . Yet there were odd bright spots. Sales of snuff were moving up; there were some sixty brands of snuff as compared with forty-odd brands of cigarettes, and American users of snuff were estimated at a record four million. . . . Also happy was a power-lawnmower company which reported that American men were getting lazier and lazier; its sales of mowers with seats shot up 44% over a year ago. . . . And in case you really had a hurry call to buy a pair of men's shoes for \$150, you could get them at the Foot-Joy Shop in New York City, plus tax. These shoes were made from matched baby alligator skins, the poor little devils.

JUNE 1958

AN ACTOR we knew before strode back onto the international stage—none other than the arrogant, temperamental Gen. Charles de Gaulle, who had been the great leader of the Free French in World War II. Once more he was taking charge of France—this time to save it from civil war. The free world was worried lest he make himself a dictator. But he did not; he pulled France through its gravest post-war crisis. . . . At home, an odd actor named Bernard Goldfine came on the stage, much to the embarrassment of Sherman Adams, the Assistant to the President. It came out in a Congressional investigation that Adams' old friend Goldfine, a Massachusetts tycoon in textiles and real estate, had lavished presents upon him—hotel bills paid, vicuña for a coat, a \$2,400 rug. The question was: Why? Surely not for interceding with Federal

regulatory agencies in Goldfine's behalf? Said Eisenhower about Adams: "I need him." If Goldfine had only known it was on the market, he might have given Adams a jeweled gift: a gem-ornamented pillbox with a built-in musical alarm that reminds you in soothing tones that it is time to take your tranquilizer.

JULY 1958

A MACABRE QUALITY crept into our entertainment in this summer of 1958. Top of the best-seller book list was *Anatomy of a Murder* by Robert Traver, a harrowing story of a murder trial. . . . A movie called *The Screaming Skull* had a prologue in which the lid of a coffin rose, labeled "This is for you"; and the film producer kindly guaranteed free burial service to anyone in the audience who died of fright. Another movie offered a \$1,000 life-insurance policy against death by fright. . . . As for television, the National Association for Better Radio and Television glued its eyes on TV for one week and saw 161 murders, sixty so-called justifiable homicides, eighty-three robberies, fifteen kidnappings, seven attempted lynchings and six dynamitings. This was 500% more killings than in the association's survey of a 1952 week. And more killings were to come, inasmuch as twenty-two Westerns were scheduled for the networks in the autumn as compared to sixteen last year.

AUGUST 1958

POPPING BACK and forth to Europe in this vacation season were more American tourists than ever before invaded Europe—600,000, or 10 per cent more than last year. And if any of them wanted to bring back parakeets (an estimated 8 million Americans do keep them as pets), they had good news of a monumental discovery. Seems you can feed the birds seed treated with an antibiotic and you won't catch psittacosis. . . . Most luxuriant racketeer testifying before Senate investigators was Anthony Acado (Capone mob), whose home outside Chicago has two bowling alleys, a pipe organ, baths with gold faucets, and for himself a \$10,000 bathtub carved from a single piece of Mexican onyx. . . . Fashion craze of the month for coeds—tights called leotards which give you a leggy look. A Detroit department store sold out its entire stock of 1,000 leotards in the first week, and Boston's Filene's stocked them on every one of its seven selling floors. Craze for the younger set—"hula hoops." Red plastic, about a yard in diameter. You don't roll them; stick 'em around your middle and make

frantic wiggles like Gilda Gray used to, and they will spin around you miraculously without falling.

SEPTEMBER 1958

SEEMS WE are never quite satisfied with our economy. Last spring we were bemoaning the recession and wondering if we were heading for a real depression. Now, presto! we found ourselves in the middle of a boom again, and Eisenhower's economic adviser solemnly warned the nation: "Inflation is the problem now." Always something to worry about. . . . Nor could we ever be happy about the international situation. Last month it was the flare-up in the Middle East, with U. S. troops going into Lebanon. This month it was Communist China's attack on Quemoy, with U. S. warships hovering in the background. Would there be war, we wondered. . . . And there was the scandal of the TV quiz shows, with one of them fired from the networks for allegedly feeding answers to contestants and other quizzes coming under investigation. . . . High on the non-fiction best-seller list was Harry L. Golden's book, "Only in America," and he disclosed that twenty-five years ago he had served a Federal prison term for running a bucketshop. Well-wishers from all over the country wired him messages of confidence, and his lecture offers shot up.

OCTOBER 1958

A MUSHROOMING new business threatened to make the \$10 bill obsolete. All you had to do was flash a little credit card and say, "Charge it," and feel like a king. It started with the Diners' Club, whose card gave you moneyless access to restaurants and night clubs all over the nation. Then the American Express Co. stepped into this never-never land of credit cards. Now you could flash your card and get auto parts, or flowers at the florist's, or books at Brentano's, or a part-time secretary from the Kelly Girl Service. . . . Another booming business was in dog foods, because the United States barking population had increased to 26 million, a jump of 35% in ten years. Now dog foods were coming specialized. If your mutt is overweight, buy Obesodiet to cut down his calories; if he has kidney trouble, try Nephrodiet; if he is an old, old hound get him Geriodiet. . . . New this month was jet plane passenger service across the Atlantic. Britain's BOAC was first with weekly flights. Right on its heels came Pan American with daily jets over the ocean, and Pan Am was booking more than 3,000 passengers for the winter season—four times as many as a year ago. The initial flight with 114 passengers took 8 hours, 20 minutes, as contrasted with 12 or 13 hours.

HEADLINE STORIES OF 1958

GENERAL CHARLES DE GAULLE

"WE ARE PERHAPS on the brink of civil war," said Pierre Pfimlin on May 14, 1958, as he took office as France's twenty-fifth Premier since the end of the war. A few hours earlier, French military officers in Algeria had seized control from the civilian administration named by the government in Paris. The fear was that this military coup might extend to France itself.

The coup by Frenchmen in Algeria grew out of the frustrations of an unsuccessful three-year semi-war against a rebellion by native Moslem rebels who demanded independence. More than 5,000 French troops had been killed, and the conflict was costing \$5 million a day, and still the native rebels were on the warpath. The French in Algeria—both civilian and military—feared a compromise with the rebels which would undermine French rule.

The leaders of the Algerian coup demanded that Gen. Charles de Gaulle take power in France. (He had been a virtual dictator in the closing days of the war.)

Said de Gaulle: "I hold myself ready to take over the powers of the Republic."

He stipulated, however, that he must be voted virtually dictatorial powers by the National Assembly (parliament). De Gaulle did take power as Premier, and in an ostensibly legal way. The National Assembly voted him in on June 1—obviously acting out of fear of a military coup d'etat or civil war or chaos. At his demand, it voted itself a suspension of lawmaking until October so that he could rule by decree.

Also at de Gaulle's insistence, the National Assembly turned over to him its power to prepare a revision of the French Constitution. This he proceeded to do. His new Constitution was designed to avoid the repeated Cabinet upsets that had kept France in turmoil. It verged on the American system of government, with a separation and balance among the executive, legislative and judicial branches.

De Gaulle's new Constitution was approved overwhelmingly in the referendum

of Sept. 28, 1958. This meant that the French Fifth Republic would be set up to replace the Fourth Republic, which came into being in Dec., 1946. It also meant that de Gaulle would govern virtually by decree for the next few months until a new Parliament could be elected.

SHERMAN ADAMS

THERE WAS an oddly named House Subcommittee on Legislative Oversight which was busy in the spring and summer of 1958. Purpose of the investigation was to find out how the many independent agencies of the U. S. government were functioning—agencies, for example, such as the Federal Trade Commission, the Federal Communications Commission, and the Securities and Exchange Commission, all of which wield enormous power over the nation's economy. The basic question was whether they operated with complete honesty and independence.

Sherman Adams was the Assistant to the President, meaning he was top man in the Eisenhower White House Staff operating the Federal Government. His name was brought up in the House inquiry. He formerly had been Republican Governor of New Hampshire, and his square New England chin was regarded as a symbol of probity.

The House investigators disclosed friendly relations between Adams and Bernard Goldfine, a native of Russia, who acquired wealth in Boston in the textile and real-estate businesses. On the House witness stand, Adams acknowledged that Goldfine had on occasion paid his hotel bills in New York, Boston, and Plymouth, Mass. The total came to more than \$2,000.

Also, Goldfine had given Adams the material for a vicuña coat, and a \$2,400 oriental rug for his apartment in Washington. Adams said the rug was just a loan,

and was to be returned when he left Washington.

Goldfine had had difficulties with two ental rug for his apartment in Washington. Federal agencies—the Securities and Exchange Commission and the Federal Trade Commission. Adams acknowledged that he had communicated three times with Federal agencies on cases involving Goldfine. Adams insisted that he had not sought to exert influence. Regarding the gifts, Adams asserted that he and Goldfine had been close friends for fifteen years and that exchange of gifts had marked that friendship.

President Eisenhower, at a news conference in June, conceded that Adams had been "imprudent" in acceptance of gifts that might be "misinterpreted." But the President backed Adams. "I respect him," said Eisenhower, "because of his personal and official integrity. I need him."

In August, the House of Representatives voted to cite Goldfine for contempt for refusing to answer questions about his financial affairs. This did not pertain to his friendship with Adams.

The Maine elections in early September gave the Republicans an unusually severe defeat. Alarmed Republican leaders urged that Sherman Adams be dropped, lest the party be harmed in the November Congressional elections. Adams resigned on Sept. 22, telling the nation by television that he had "done no wrong." President Eisenhower accepted the resignation "with sadness."

NIKITA KHRUSHCHEV

IT WAS ON March 6, 1953, that the Soviet Union announced the death of its dictator, Josef Stalin. The world speculated briskly on who would succeed him. Malenkov? Molotov? Beria? Bulganin?

The world speculation underestimated the willness of Nikita S. Khrushchev, a former peasant from near the Ukraine, who once worked in a coal mine.

One by one, Khrushchev out-manuevered the top men of Soviet Russia. Beria was executed. Malenkov and Molotov were banished to remote and inconsequential jobs. Bulganin became Premier.

All along, Khrushchev was praising what he termed "the principle of collective leadership" as contrasted with what he denounced as "the cult of the individual"—meaning one-man dictatorship like Stalin's.

Nevertheless, on March 27, 1958, Khrushchev managed to oust and banish Bulganin and to succeed him as Premier. Thus Khrushchev assumed the mantle of Stalin.

But Khrushchev inherited plenty of troubles—unrest in satellite Poland, sullen gloom in crushed Hungary and a renewal

of the quarrel with Tito's independent Communist regime in Yugoslavia.

There were indications that Khrushchev also was under pressure from Mao Tse-tung, leader of Communist China. For the first eight months of 1958, Khrushchev had been badgering the West to hold a

"summit" conference of heads-of-government. The West finally agreed in August to hold such a conference under the aegis of the United Nations Security Council. Khrushchev agreed. Then he made a secret trip to Peiping to talk to Mao. On returning to Moscow, he abruptly reversed himself and rejected the "summit" talks.

BORIS PASTERNAK

BORIS PASTERNAK, 68, was known as one of Russia's most eminent poets. He wrote a novel, *Doctor Zhivago*, which was critical of the Soviet regime. For example, the novel's central character commented: "The great majority of us are required to live a life of constant, systematic duplicity. Your health is bound to be affected if, day after day, you say the opposite of what you feel, if you grovel before what you dislike. . ."

The Soviet Union did not permit publication there of Pasternak's novel, but it was smuggled out and published in the U. S. and other countries.

Doctor Zhivago won the 1958 Nobel Prize for literature, awarded by the Royal Swedish Academy and carrying a monetary

prize of \$41,250. Pasternak cabled the Academy saying: "Immensely thankful, touched, proud, astonished, abashed."

Then a storm of abuse broke around him in the Soviet Union. There were demands that he be exiled.

Thereupon, Pasternak cabled Stockholm his rejection of the Nobel Prize. He also wrote a pathetic and apologetic letter to Khrushchev: "Whatever my mistakes and errors might have been," he said, "I could not imagine that I would find myself in the midst of a political campaign which has been fanned around my name in the West." He begged not to be exiled, writing: "To go beyond the frontier of my own land to me is equal to death."

ELECTION OF NEW POPE

POPE PIUS XII was born Eugenio Pacelli in Rome in 1876. He became the Pontiff of the Roman Catholic Church on Mar. 12, 1939. His selection was largely attributable to the fact that he had been a diplomat in the service of the Vatican, attaining the post of Secretary of State, and was therefore alert to world affairs.

Pius XII had two strokes of paralysis in the week beginning Oct. 5, 1958, and died Oct. 9. The College of Cardinals, reduced by vacancies and deaths to fifty-one, met on Oct. 25 to elect a new Pope.

Black smoke came out of the Vatican stove for ten ballots of the College of Cardinals. On the eleventh ballot, Oct. 28, white smoke came out, meaning that the Roman Catholic Church had its 262nd Pope. He chose the name of Pope John XXIII. The name John has been the most popular in the annals of the Pontificate.

The new Pope, 77 years old on Nov. 25, 1958, was born thirty miles northeast of Milan into a family of modest farmers. He was Angelo Giuseppe Roncalli. He was

ordained a priest in Rome in 1904, served as an Italian army chaplain in World War I, and became a Cardinal in 1953.

Pope John XXIII has been a diplomat in the service of the Church and has had success in the field. From 1925 until late in 1944, he was the Vatican's diplomatic delegate in Bulgaria, then in Turkey and in France. In the last country, he was Papal Nuncio to Paris for eight difficult years at the close of World War II and afterward.

His associates say he has a quick mind, a quick smile, good health, and a determined character. He begins his reign later in life than any Pope in 228 years.

Less than twenty-four hours after his election, the new Pontiff broadcast an appeal to all rulers of the world today to work for peace. He spoke for twenty minutes in Latin. He asked God's help for those in countries where there is no religious freedom—an indirect reference to Communist-ruled nations.

SCHOOL SEGREGATION

MORE and more serious repercussions were developing from the Supreme Court's 1955 decision ordering integration of

Negroes and whites in the public schools. In 1957 Gov. Orval Faubus of Arkansas defied a Federal court order to let Negro students

into Central High School in Little Rock. President Eisenhower dispatched Federal troops to see that the Negroes were admitted, which they were.

Shortly before schools were to open in the fall of 1958, Faubus said he was determined again to keep Negroes out of the school. Quick legal moves brought the case before the Supreme Court, which met in a rare special session. On Sept. 12 it unanimously ordered admission of seven Negro students by Central High School.

Seven hours later Faubus closed all four high schools in Little Rock under laws that he had guided through the Arkansas state legislature, thus defying the Supreme Court. He was defying President Eisenhower, also, for on the same day the President issued a statement calling for compliance with the court ruling. "All of us know," he said, "that if an individual, a community, or a state is going continuously

and successfully to defy the rulings of the courts, then anarchy results."

Virginia, too, had laws requiring Gov. J. Lindsay Almond to close schools to avoid court-ordered racial integration. He closed six high schools.

Faubus planned to meet the situation by leasing the vacant public school buildings to a private corporation which would operate them on a segregated basis. This was held illegal by the Federal 8th Circuit Court of Appeals. And the Supreme Court ruled that "evasive schemes for segregation" of public schools were invalid, indirect attempts to "nullify" the Constitutional right of all children to integrated education. Little Rock's leasing plan was dropped.

By late October, a very small proportion of Little Rock students were attending segregated classes supported by private donations.

QUEMOY ISLANDS

ON AUG. 23, 1958, Communist China opened a fierce and prolonged artillery bombardment of the Quemoy Islands (known as Big and Little Quemoy) which lie in the Strait of Formosa some five miles off the Communist-held mainland of China. Thereby, Red China was risking a military clash with the powerful U. S. 7th Fleet in the Formosa Strait. It was soon to be reinforced by aircraft carriers and other war vessels, which made it the mightiest naval concentration in the world.

The background was this:

Congress had approved on Jan. 25, 1955, a resolution requested by President Eisenhower authorizing him to use armed force if necessary to protect Formosa and the nearby Pescadores Islands as being vital to our own defense interests. The Quemoy Islands were not mentioned, but the resolution was flexible in that the President was authorized to determine what "related positions" in the area needed to be defended.

After the Red bombardment opened up in 1958, President Eisenhower said that the Quemoy Islands "have increasingly become related to the defense of Formosa." The implication was that the United States would help defend them if necessary.

Whether the Reds intended to attempt invasion of the Quemoy Islands was not immediately clear. But their constant bombardment ringed the islands with shells so it was impossible to land adequate supplies. President Chiang Kai-shek had 90,000 of

this Formosa Nationalist troops on the Quemoy Islands and there were 40,000 civilians.

The United States helped the Nationalists by sending warships to convoy their supply ships toward the Quemoy Islands, but our ships stayed 3 miles offshore, apparently to stay out of artillery range and minimize the danger of hostilities.

In September the United States and Red China opened talks about the Formosa situation. These were held in Warsaw through the respective Ambassadors to Poland.

The United States hoped to persuade both the Communist Chinese and the Formosa Nationalists to renounce the use of force in the Formosa Strait and cease firing. This would mean that President Chiang Kai-shek would have to abandon his dream of reconquering the mainland—which nearly everybody regarded as nothing but a dream, anyway. If a cease-fire took effect, the United States would advise Chiang to reduce substantially the number of his troops in the Quemoy Islands, which amounted to about one-third of his armed forces.

Secretary of State Dulles flew to Formosa in October to confer with President Chiang Kai-shek. The main result was a formal renunciation by Chiang of any intention to attempt the forceful reconquest of the Communist-held mainland.

Meanwhile, the Communist bombardment of Quemoy had become sporadic, with occasional "truces" voluntarily proclaimed by Peiping.

NEWS CHRONOLOGY OF 1958

JANUARY 1958

- 3 Sir Edmund Hillary reaches South Pole overland; first to do so in 46 years.
 - 12 Eisenhower asks Russia for outer-space peace pact banning missiles.
 - 13 Eisenhower budget calls for \$73.9 billion.
 - 13 United Auto Workers ask motor industry to share profits with employees and customers.
 - 15 Federal Reserve Board cuts stock margin requirement from 70% to 50%.
 - 23 Venezuela overthrows dictator, President Pérez Jiménez, after heavy street fighting.
 - 23 James R. Hoffa takes presidency of Teamsters' union after court battle.
 - 25 Robert R. Young, 60, board chairman of New York Central RR, shoots self to death in Palm Beach.
 - 27 U. S. and Soviet Union sign agreement to increase cultural exchanges.
 - 31 Army's Jupiter-C rocket fires first U. S. earth satellite, Explorer I, into orbit.
- DIED:* 25—Robert R. Young, 60.

FEBRUARY 1958

- 1 Egypt and Syria merge into one nation—United Arab Republic.
 - 10 House subcommittee investigating Federal agencies fires its chief counsel, Dr. Bernard Schwartz. He charges "whitewash."
 - 14 Iraq and Jordan proclaim federation, uniting the two countries.
 - 15-16 Worst blizzard in two years hits East Coast; death toll estimated at 170.
 - 19 Eisenhower asks \$3.9-billion foreign aid.
 - 21 Nathan Leopold, Jr., co-slayer of Bobby Franks in 1924, wins parole after 33 years in prison.
 - 26 Eisenhower says "It will take some time to stop the recession."
- DIED:* 13—Helen Twelvetrees, 50; 14—Georges Rouault, 86; 16—Joe Frisco, 68.

MARCH 1958

- 2 Yemen to join Egypt and Syria in United Arab Republic.
- 7 February unemployment was 5,173,000, highest in 16 years.
- 17 Navy rocket puts Vanguard I, 3¼-

pound earth satellite, in orbit; highest peak is 2,513 mi.

- 22 Mike Todd, film producer, killed in crash of his private plane in New Mexico.
 - 24 King Saud, of Saudi Arabia, yields governing authority to his brother, Crown Prince Faisal, who is pro-Nasser.
 - 25 Eisenhower asks Congress for temporary program of Federal payments to extend period of state unemployment insurance.
 - 26 Army puts in orbit Explorer III with Jupiter-C rocket.
 - 27 Khrushchev becomes Premier of Soviet Union as Bulganin resigns.
 - 31 Soviet government announces suspension of nuclear weapons tests; demands U. S. and Britain also halt testing.
- DIED:* 22—Mike Todd, 49; 28—W. C. Handy, 84.

APRIL 1958

- 3 Eisenhower presents Pentagon reorganization plan giving broader powers to Secretary of Defense.
 - 4 Actress Lana Turner's daughter, Cheryl, 14, stabs to death mother's boy friend, John Stompanato.
 - 6 Capital Airlines Viscount turboprop plane crashes in Michigan, killing all 47.
 - 8 Khrushchev, visiting Hungary, says Soviet Union will help crush any future satellite uprisings.
 - 9 Fidel Castro uprising in Havana against Batista is put down.
 - 14 Soviet Sputnik II, with dead dog, drops and disintegrates after about 2,370 trips in orbit around the earth.
 - 14 Van Cliburn, of Texas, wins first prize in Moscow international piano contest.
 - 15 8 paintings damaged in fire at New York's Museum of Modern Art.
 - 18 U.S.S.R. charges U. S. sends nuclear bombers flying toward its borders on false radar alerts.
 - 21 49 die as airliner and Air Force jet collide over Las Vegas, Nev.
 - 26 Baltimore & Ohio Railroad discontinues New York-Washington service after 68 years.
 - 29 United Arab Republic agrees to pay \$82 million to Universal Suez Canal Co. for nationalized canal.
- DIED:* 7—Elliot Paul, 67; 8—George Jean Nathan, 76; 15—Estelle Taylor, 58.

MAY 1958

- 2 Soviet Union vetoes in U. N. Security Council the U. S. proposal to patrol Arctic against surprise attack.
 - 7 New series of U. S. nuclear tests at Eniwetok disclosed as under way.
 - 8 Vice President Nixon stoned by Peru rioters led by Reds.
 - 15 Soviet Union sends into orbit 1½-ton Sputnik III.
 - 18 U. S. regains cone of Army Jupiter rocket in re-entry test.
- DIED:** 5—James Branch Cabell, 79; 8—Norman Bel Geddes, 65; 10—Lucien Lelong, 68; 14—Thomas L. Stokes, 59; 17—F. Hugh Herbert, 60; 18—Elmer Davis, 68; 19—Ronald Colman, 67; 27—Samuel Cardinal Stritch, 70; 29—Juan Ramón Jiménez, 76.

JUNE 1958

- 1 French National Assembly votes in Gen. Charles de Gaulle as Premier by 329-224.
 - 10 House investigators say Boston industrialist Bernard Goldfine paid hotel bills for Sherman Adams, chief Eisenhower aide.
 - 11 U. N. Security Council votes to send watch-dog team to Lebanon, beset by civil war. Lebanon says pro-Nasser Syrians aid rebels.
 - 17 Hungarian Justice Ministry announces execution of leaders of 1956 revolt, headed by Premier Imre Nagy.
 - 28 Cuban rebels kidnap 29 American service men from Guantanamo Navy base.
 - 30 Congress votes Alaska in as 49th state.
- DIED:** 9—Robert Donat, 53; 20—Herbert Bayard Swope, 76; 28—Alfred Noyes, 77.

JULY 1958

- 1 East-West scientists open conference in Geneva on detection of nuclear bomb tests.
- 9 Air Force fires Thor missile 6,000 mi. with mouse in nose cone. Cone returned to earth intact, but it and mouse were lost in Atlantic.
- 14 Pro-Nasser Army officers shoot King Faisal of Iraq and seize rule, proclaiming republic.
- 15 Eisenhower orders U. S. Marines into Lebanon at request of President Chamoun, who fears overthrow.
- 17 British paratroopers land in Jordan on request of King Hussein.
- 18 Russia vetoes in U. N. Security Council a U. N. armed force to patrol Lebanon, as requested by U. S.

- 22 85th Soviet veto in U. N. Security Council bars Japan's Middle East plan.
 - 26 U. S. fires into orbit Explorer IV satellite weighing 38.43 lbs.
 - 31 Lebanon crisis eased as army commander, Gen. Fuad Chehab, is elected President.
- DIED:** 5—Rachel Crothers, 78; 26—Ex-Sen. Eugene D. Millikin, 67; 27—Lt. Gen. Claire L. Chennault, 67.

AUGUST 1958

- 3 Khrushchev ends 4-day secret visit to Peiping.
 - 5 Khrushchev kills U. N. summit parley.
 - 8 U. N. General Assembly meets in special session on Middle East.
 - 8 U. S. atomic submarine *Nautilus* crosses top of world under North Pole.
 - 13 Eisenhower urges U. N. to set up Middle East "peace force."
 - 14 Worst single plane commercial air crash kills all 99 aboard KLM plane out of Shannon for New York.
 - 17 First U. S. moon rocket blows up after rising 10 miles in 77 seconds at Cape Canaveral, Fla.
 - 19 World's largest submarine, *Triton*, launched at Groton, Conn.; Navy's 8th nuclear submarine.
 - 21 U. N. General Assembly vote 80-0 in favor of Arabs' plan for peace in Middle East.
 - 22 Eisenhower offers 1-year suspension of U. S. nuclear-arms tests.
 - 23 Chinese Communists begin heavy shelling of Nationalist-held offshore Quemoy Islands.
 - 26 Alaska votes by big margin to become 49th state.
 - 27 Eisenhower hints U. S. will help defend Quemoy as part of defense of Formosa.
 - 28 Arkansas Legislature votes to close any school facing forcible racial integration.
- DIED:** 14—Frédéric Joliot-Curie, 58; 16—Wolcott Gibbs, 56; 22—Roger Martin du Gard, 77; 24—Johannes G. Strijdom, 65; 26—Ralph Vaughan Williams, 85; 27—Dr. Ernest O. Lawrence, 57.

SEPTEMBER 1958

- 6 U. S. 7th Fleet warships convoy Nationalist supplies to Quemoy.
- 8 Maine, first to vote, elects its first Democratic Senator, Edmund S. Muskie, and a Democratic Governor.
- 12 Supreme Court orders immediate racial integration in Little Rock high school; Gov. Faubus orders all 4 high schools closed.
- 13 Eisenhower asks Khrushchev to restrain Red China at Formosa.

- 15 43 known dead as part of New Jersey commuter train drops off open draw-bridge into Newark Bay.
- 15 U. S. opens talks in Warsaw with Red China about Formosa.
- 16 Charles Malik, of Lebanon, elected president of U. N. General Assembly.
- 17 6-hour Ford strike settled with worker benefits; 3-year pact.
- 18 Virginia has closed 3 schools to avoid integration.
- 22 Sherman Adams resigns as The Assistant to the President, denying any wrong-doing.
- 23 General Assembly bars Red China membership, 48 to 22.
- 23 Gen. Fuad Chehab assumes Presidency in Lebanon. Riots take 15 lives.
- 27 Little Rock, Ark., votes 3 to 1 against school integration.
- 28 France overwhelmingly approves de Gaulle constitution.
- 29 U. S. Supreme Court bars evasion of school integration.
- DIED:** 11—Robert W. Service, 84; 20—Denys Wortman, 71; 21—Mary Roberts Rinehart, 82.

OCTOBER 1958

- 2 General Motors follows Chrysler and Ford in signing 3-year union contract.
- 6 U. S. atomic submarine *Seawolf* surfaces after record 60 days under water.
- 7 Judge Potter Stewart, 43, of Ohio, named to Supreme Court to succeed retiring Justice Harold H. Burton.
- 9 Pope Pius XII dies at 82.
- 23 Nobel literature prize goes to Boris Pasternak, Russian writer critical of Soviet regime, for his novel *Doctor Zhivago*.
- 24 Chiang renounces use of force to reconquer Chinese mainland.
- 28 Nobel physics prize goes to 3 Soviet physicists: Pavel A. Cherenkov, Ilya M. Frank and Igor Y. Tamm. Chemistry prize goes to Frederick Sanger, of Britain.
- 28 Angelo Giuseppe Cardinal Roncalli elected Pope; takes name John XXIII.
- 30 3 Americans share Nobel prize in medicine—Drs. Joshua Lederberg, George W. Beadle and Edward L. Tatum.
- 31 U. S., Russia and Britain open talks in Geneva on banning nuclear-weapons tests; Russia refuses temporary ban.

Principal Congressional Bills Enacted in 1958

Bill or treaty	Party	House vote		Senate vote		Date enacted
		Yea	Nay	Yea	Nay	
Housing bill. Provided \$1.85 billion to stimulate housing construction.		Voice vote approval		86	0	April 1, 1958
Road bill. Added \$1.8 billion to previous appropriations.		Voice vote approval		Voice vote approval		April 16, 1958
Postal rates and pay raise bill. Increased first-class mail from 3c to 4c per oz., etc. Provided 7½% pay raise to postal employees.		379	0	88	0	May 27, 1958
Jobless aid bill. Extended by 50% the duration of unemployment benefits for those who had exhausted their benefits. Provided on loan basis to the states, to be repaid by them.	Dem. Rep.	60 163	148 17	} 88		0 June 4, 1958
Alaska statehood bill. (Alaska has also approved.)	Dem. Rep.	117 91	81 85	31 33	13 7	July 7, 1958
Reciprocal trade bill. Extended program for 4 years; gave continued power to President to reduce tariffs on reciprocal by 20%.	Dem. Rep.	} 161		56 { 40 32	6 12	Aug. 20, 1958
Presidential pension bill. Gave \$25,000 annually to ex-Presidents and \$10,000 to their widows.		165	45	Voice vote approval		Aug. 25, 1958
Foreign aid bill. Appropriated \$3.3 billion for fiscal 1959, plus \$644 million in carryover.	Dem. Rep.	Voice vote approval		25 26	9 8	Aug. 29, 1958
Debt limit rise. Raised limit to \$283 billion permanently and to \$288 billion temporarily.		Voice vote approval		57	20	Sept. 2, 1958
Science education bill. Provided loans and fellowships to teachers and guidance counselors; encouraged foreign language study. (\$800 million over 4 years.)	Dem. Rep.	Voice vote approval		37 29	7 8	Sept. 2, 1958

Elections of 1958

IN THE ELECTIONS of November 4, 1958, the Democratic Party scored its biggest mid-term triumph in about 25 years.

The Democrats already had controlled Congress—both Senate and House—but they increased their control substantially. The returns as of Nov. 5 indicated that they had gained thirteen Senate seats and about forty-six House seats.

Among the states in which the Democrats scored notable gains were Connecticut, New Jersey, Michigan, and Wisconsin. Even in Vermont, a Democrat was elected to the House of Representatives for the first time in 106 years. In Ohio, the Democrats sent to defeat the veteran Senator John Bricker, who was regarded as an isolationist.

However, the Republicans had a major consolation prize in New York. Nelson A. Rockefeller, 50, won the governorship by a remarkable plurality of more than half a million votes. His defeated opponent was the incumbent Governor Averell Harriman, 66, a Democrat. This race attracted nationwide attention because it involved two men whose names had become famous in American economic history for amassing wealth.

Rockefeller was generally regarded as a liberal Republican, not a reactionary. Harriman was regarded as a New Dealer. Rockefeller's victory was accompanied by the

victory of his Republican running mate for the United States Senate, Kenneth B. Keating, who sent to defeat New York's District Attorney, Frank S. Hogan, running on the Democratic-Liberal tickets.

Another state that was closely watched in the election was California. There Senator William F. Knowland, generally regarded as a leader of the conservative wing of the Republican Party, was running for Governor. He was defeated by Edmund G. Brown, a Democrat. Involved in this contest was the question of a "right-to-work" amendment to the state constitution. It would have forbidden the union shop, which requires new employees to join the union. Labor opposed the amendment in the belief that it would tend to undermine union strength. Knowland favored it and Brown opposed it. The proposed amendment was defeated.

The "right-to-work" proposal was defeated in five of the six states in which it was put before the voters. Only in Kansas was it adopted.

The election result in California had the effect of placing a large obstacle to Knowland's ambition to win the Republican Presidential nomination in 1960. Similarly, the Rockefeller victory in New York made him a possible rival to Vice President Nixon for the 1960 Republican nomination.

THE HOUSE OF REPRESENTATIVES

The apportionment based on the Seventeenth Census (1950) distributed the seats in the House among the states according to the method of equal proportions. By this method the per cent difference between the average number of Representatives per million people in any 2 states is made as small as possible. Also, the per cent difference between the average districts, i.e., the average number of persons per Representative, in any 2 states is made as small as possible. By equalizing the representation of all pairs of states, the method gives as nearly equal representation as possible to all states in proportion to their population.

The numerals indicate the Congressional Districts of the states, and the designation At-L means At-Large. An asterisk (*) indicates that the Congressman was returned to office in the 1958 elections. The terms of all Representatives end January, 1961.

YOUR HEALTH AND LONG LIFE

PREPARED IN COLLABORATION WITH MEMBERS OF THE

Medical Department of the HEALTH INSURANCE PLAN OF GREATER NEW YORK

HEALTH may be defined as the state of complete physical, mental, and social well-being. It implies much more than the absence of disease or infirmity. When we are healthy we are able to work, think, and act without fatigue, pain, or irritation.

Health is our greatest asset. It must not be taken for granted and it should not be squandered. When our health is good, we seldom think about it. When we lose it, we may find it difficult to think about anything else.

Care of our health should not be expensive. On the contrary, it should and can be comparatively inexpensive *if we spend money for medical services at the right time in the right place for the right things.* It is interesting to note how little we invest for the protection and preservation of our health when we are healthy and how much we are prepared to spend when we become ill.

The following table compares the amount that Americans spent for medical care in 1955 compared with what they spent for alcoholic beverages and recreation.

1955 PERSONAL CONSUMPTION EXPENDITURES *

Total Medical Care	\$11,272,000,000
Alcoholic Beverages	9,050,000,000
Recreation	13,034,000,000

* *Journal of the American Medical Association*, 162:414 (Sept. 22, 1956)

Personal Hygiene and the Rules of Health

Life in our modern society is much more complicated than it formerly was and many rules of health accepted by our ancestors now have little relevance. We may have difficulty in evolving our own rules of health, for each of us has individual needs and must make his own adjustment to environmental stress.

Many times during our lifetime we may

In 1957, over \$300,000,000 were spent for medical research in the United States. This was about two-thirds of 1% of the country's military expenditures. The President's Commission on the Health Needs of the Nation estimated, in 1952, that less money was spent on medical research than on tombstones and monuments.

From funds raised by voluntary agencies, the total amount devoted to research in heart disease, cancer, mental illness, arthritis, neurological diseases, and blindness was about one-eighteenth of that spent by the American people on chewing gum, about one-fifth of the amount spent on ball point pens, one-quarter of the outlay on lipsticks, and one-third of that spent on powder compacts.

As Americans, most of our children can now be born healthy and can reasonably expect to escape many former perils of infancy and early childhood. They can be protected from unnecessary infections, can avoid crippling deformities, and can attain and maintain a degree of health that permits useful and vigorous living with expectation of an age span much greater than could be anticipated by their forebears.

In 1900 the average life expectancy of newborns was only thirty-seven years; today the average life expectancy at birth is almost seventy years and many will live beyond that.

be assailed by doubts or we may develop discomforts or fears which we are unable to interpret correctly. In seeking help we cannot be guided by advice of well-meaning but medically untrained friends or relatives.

If we have doubts, we should seek help from our physician, for unwarranted fears are destructive of health. He can tell us

if our fears are unfounded or what to do if they are not. We should consult him promptly and without dread that he will regard our fears as foolish or hypochondriac. In his advice, however, he also must take into account how we make our living, what we do in our spare time, and how we react intellectually and emotionally to our environment.

Even in our complex society there are, however, two fundamental rules of health that are as applicable now as they ever were. The first is: *Be moderate in everything—in food, in drink, in strenuous work, in thought, and especially in temper.* The second is: Avoid wasting energy in useless activities that fail to provide contentment or satisfaction.

Food and Drink

We need not regard eating and drinking merely as a duty. It is one of the great pleasures of life and our health will be better if we regard it as such. Our meals should be taken in leisure, in pleasant surroundings, with pleasant companions. Each morsel should be savored. But we ought not to stuff ourselves. We should not drink too much when we eat lest we overtax our digestive organs. Spices may be used to improve the flavor of food, but too much should be avoided, for they may irritate or congest body membranes. Salt should be taken in moderation because excessive amounts tend to increase the storage of water in the body, disturbing normal internal functions.

Our food must contain all the elements necessary to maintain us. For example, more than 70% of our body weight consists of water. Loss of water through perspiration, breathing, and elimination must be promptly replaced, especially in hot weather.

Protein is needed to rebuild the tissues that are destroyed in everyday wear and tear.

Fats and carbohydrates must be consumed to furnish energy.

Vitamins are required to prevent dietary deficiencies and to assure full utilization of other foods.

Minerals such as potassium, calcium, and phosphorus found naturally in most of our foods are needed in amounts sufficient to maintain body fluid of uniform composition.

The amount of food we need varies with the kind of life we lead. We need proportionately more food in childhood when we are growing rapidly or when exerting

ourselves vigorously. We need less food when we are less active or growing old.

Ordinarily, an adult who works at a white collar sitting job should not consume more than 1,800 calories. But this would depend also on the size, age, and sex of the individual. On the other hand, an active athlete or laborer performing long hours of work may require over 4,000 calories.

In other words, each of us ought to consume in the long run the amount of calories we use up. An adequate intake of protein is essential but in America this needs little emphasis, since our abundance of food supplies enough in ordinary diets to replace broken-down tissues.

To be sure that we are getting enough to eat, we may rely to some extent on the bathroom scale. A record of weight at regular intervals should help indicate whether a diet is adequate.

We should remember that excessive perspiration may cause weight loss, while on the other hand, the extreme consumption of large amounts of salt may lead to drinking and storage of unneeded water by the body, and thus a weight gain. A physician should be consulted if there is a consistent loss or gain in weight.

In many parts of the world, lack of proper food is the greatest obstacle to good health but in America this is rarely a serious problem. On the contrary, the danger for most of us is that we will eat too much, will stuff ourselves. And if we make a habit of this we will become fat and lazy and sick. Many, in effect, dig their graves with their teeth.

The dangers of overeating can be really alarming. We must watch the total number of calories we consume. We must pay particular attention to the quality and amount of fat in our diet.

Let us beware of eating too much dairy fat in the form of cream, butter, and cheese. Also, eating too much animal fat in the form of gravies, fat meat, and lard is unwise.

Fat can contribute to the complications of atherosclerosis, a form of hardening of the arteries. This is one of the greatest enemies of health and long life that Americans face.

Even if it doesn't kill us prematurely overeating offers other dangers and disadvantages. If we eat too much we increase our chances of getting diabetes, high blood pressure, or a heart attack. Overeating also increases the possibility of gallstones, shortness of breath, and makes us feel the heat more; it will bring excessive sweating and a variety of skin diseases. It fosters stretching of the lungs

Calories and Vitamins of Selected Foods

¹ R—raw; C—cooked; PC—partially cooked. ² Cooked short time in small amount of water. ³ Boneless. ⁴ 4% nonfat milk solids. ⁵ Year-round average. ⁶ Made from skim milk. ⁷ Bone out. Vitamin values based on muscle meat only. ⁸ Based on yellow corn; white corn contains only a trace. ⁹ Patent. ¹⁰ Vitamin A added. ¹¹ Meat only. ¹² If very pale varieties only were used, value would be much lower. ¹³ Milk added. ¹⁴ No sugar added. ¹⁵ Data assume cut to be prepared by braising or pot roasting. Use of proportionate quantity of drippings would add approximately 50% more thiamine and niacin and 25% more riboflavin.

NOTE: Parentheses denote imputed values. The sign ... shows that no basis could be found for imputing a value although there was some reason to believe that a measurable amount might be present.

rupture, and arthritis of the hips and knees.

Overweight can be avoided in most instances by a proper balance between intake of energy (food) and expenditure of energy (as physical activity). Energy is measured in caloric units, and if the number of calories taken in as food is consistently less than the number of calories we use up through physical activity, we will lose weight.

Practical application of this rule may be difficult because of psychological factors and the simple fact that mental and emotional unhappiness may cause some people to overeat.

Undernutrition

We must be careful not to overdo our dietary restriction, on the assumption that if limitation of calories to a given amount is desirable for weight reduction, more stringent deprivation will be even more helpful. Although further caloric reduction will result in even more rapid loss in weight, great care must be exercised to include amounts of protein and vitamins sufficient for the normal functions of the body.

Vitamins are chemical substances other than protein, fat, and carbohydrates, that occur naturally in many foods and are essential, in small amounts, for normal body functioning.

The following list of some important vitamins gives the major sources of each and indicates the results of deficiency.

VITAMIN A—Fish liver oils, butter, egg yolk, and liver. Deficiency may cause defective vision at night, inflammation of the eyes, and disorders of the skin.

VITAMIN D—Fish oils and egg yolk. Milk is often enriched with Vitamin D by special process, and Vitamin D is produced naturally in the body on exposure to sunlight. Deficiency may cause rickets, a disease manifested by defects in the mineral metabolism of bones.

VITAMIN E—Green leafy vegetables, wheat germ oil, and peanuts. Deficiency has not been proved to cause any specific disorders in man. It has been suspected that it might interfere with reproduction.

VITAMIN K—Green vegetables (such as kale, spinach). It is formed in large amounts by bacteria that normally inhabit the large intestine. Deficiency

interferes with formation of prothrombin, a substance necessary for normal blood clotting.

VITAMIN C (Ascorbic acid)—Fresh fruits (especially citrus fruits) and fresh vegetables. Deficiency may cause scurvy, a disease manifested by hemorrhage and by disorders of bones and joints.

VITAMIN B COMPLEX—(Comprises a group of many distinct substances)—

(a) Thiamin (B-1)—Whole grain cereals and breads (especially when enriched), yeast, and meats (especially liver and pork). Deficiency may cause beriberi, a disease characterized by disorders of nerves, heart, and fluid distribution.

(b) Riboflavin (B-2 or G)—Liver, pork, kidney and other meats, milk, and eggs. Bread is often enriched with riboflavin. Deficiency may cause disorders of the mouth, the tongue, and the skin.

(c) Niacin (Nicotinic acid)—Meats, fish, enriched cereals, whole grain cereals, and yeast. Deficiency may cause pellagra, a disease manifested by disorders of the skin, tongue, mouth, intestines, and brain.

(d) Folic acid—Liver, beef, veal, kidney, and yeast. Deficiency may cause anemia.

(e) Vitamin B-12—Muscle meats, milk, egg, cheese. Deficiency may cause anemia.

Other substances found in the Vitamin B complex are listed with their food sources. The clinical consequences of deficiency are not well defined:

(f) Pyridoxine (B-6)—Liver, kidney, wheat germ, whole grain cereals, and yeast.

(g) Pantothenic acid—Kidney, liver, egg yolk, and yeast.

(h) Inositol—White grains, yeast, milk, meats.

(i) Choline—Brain, heart, sweetbreads, liver, and kidney.

(j) Biotin—Eggs, yeast, milk, liver, and kidney.

(k) Para-aminobenzoic acid (PABA)—Liver, yeast.

To prevent vitamin, protein, and other

food deficiencies during periods of fasting for correction of overweight, the following list of foods furnishes a rough guide of minimum dietary constituents for an average adult.

Milk—2 glasses a day
 Eggs—5 a week
 Meat, fish, poultry, or cheese—2 servings a day
 Vegetables—2 servings a day
 Fruit—3 servings a day, including one citrus fruit
 Bread—3 slices of bread a day.

Vitamins as medication are necessary only during recovery from severe or prolonged illness when food intake is inadequate in quantity or quality and during certain diseases (which interfere with the absorption or utilization of food). For the average person who eats normally, taking of vitamins serves no useful purpose.

Sleep

There is a limit beyond which we cannot do without sleep. Men have starved for more than forty days, but a sleepless week is beyond the bounds of human endurance.

How long and when people need to sleep varies with individual needs.

Most adults seem to need about eight hours sleep. A few may need ten hours. Some active, vigorous people appear to thrive on no more than five hours at night, if they have trained themselves to steal short naps between daytime tasks. This privilege obviously is not shared by many. Three hours of completely restful sleep may be better than eight interrupted by anger, worry, or bad dreams.

By the time we become adult, we should have developed good sleeping habits, since we spend 25% or more of our lives in sleeping. The ability to sleep soundly is part of having a healthy mind as well as a healthy body.

Some things may interfere with sound sleep. Among them are uncomfortable surroundings, unaccustomed light and noises, drinking coffee or tea late in the day, unpleasant memories and worries.

Our sleep may be disrupted by grief, fear, or anxieties. And sleep also may not come because we are afraid that it won't.

Since sleep is one of the foundations of good health, the lack of sleep may be a warning of the loss of health. If the lack of sufficient sleep continues long enough, it will lead to loss of weight and strength. People in this condition are easily susceptible to colds and other more serious infections.

If we can't sleep we may try reading a dull book. The time-honored method of

counting sheep is also recommended. If this doesn't work, we may practice deep rhythmical breathings. A hot bath or a hot drink, or placing a hot water bottle against the feet if they are cold also may be helpful.

If discomfort or pain is causing wakefulness an aspirin may be taken. When we are worried we may be able to reason ourselves out of it. If sleep does not come after home measures are tried, a physician should be seen.

Treatment with sedatives and the newer "miracle" drugs is not recommended because they result in unnatural sleep and lead to a feeling of depression. They may be dangerous to use without the control and judgment of a physician.

Care of the Bowels

It is well to cultivate the habit of regularity and to encourage bowel movement either before or after breakfast each morning and to allow enough time for this. Among the factors that might interfere with regular movements or foster constipation are travel, stress, worry, or changes in food.

When the bowels do not move regularly, body wastes accumulate and we may get headaches, aching muscles, indigestion, and belching. We may have a feeling of tightness, distention, or bloating in the abdomen.

Most people are used to one or two bowel movements daily, usually after breakfast or after the largest meal of the day. Such frequency is not necessary to all and one may skip a day or even several days without developing unpleasant symptoms or feeling the need for special treatment.

Laxatives, cathartics, and enemas are almost always harmful, and even though they may be effective temporarily, tend to develop chronic constipation. In other words, their use is to be avoided.

Simplest measures are best to encourage bowel regularity. Lubricants such as mineral oil are helpful, but they should not be used too frequently because they may interfere with the body's absorption of Vitamin A and other fat soluble vitamins.

It may also be helpful to eat vegetables and fruit containing roughage. Simple medications such as agar and cellulose may be useful. The best treatment of all, however, is to cultivate regular habits and to eat foods that agree with us.

Care of the Teeth

It is easier and cheaper to take care of our teeth than to treat them after trouble starts. It is best to correct malformations,

cavities, and infections in their early stages. Tooth decay and cavities are a serious problem in the United States.

One of the most promising findings in recent years is that the consumption of very small amounts of fluoride in the drinking water (one part in a million) helps to reduce tooth decay in children (60%), and tends to check it at all ages without harmful results.

As of May 1, 1958, there were 1,644 communities in the United States that had undertaken to add fluoride to their water supplies. Approximately 33,500,000 persons were thus protected, in addition to some 3,000,000 persons whose drinking water contains protective amounts of fluoride through natural sources.

The frequency of dental decay can also be greatly reduced by avoiding the eating of candy, and of other sweets, especially before retiring at night.

The teeth should be brushed morning and evening, preferably after meals, in order to cleanse them. Brushing removes food particles which may give rise to cavities and disease of the gums.

Most tooth pastes are equally good for they help form a lather during the brushing and aid in the mechanical cleansing process. We may therefore ignore the theoretical virtues of the various dental preparations advertised on TV and radio and choose the one that tastes best.

Activity, Occupation, and Hobbies

Most people are not happy thinking about themselves all the time. A healthful adjustment to life requires intensive, varied, and pleasant outside interests. For many this means earning a living at something they enjoy doing. Others may find outside enjoyment in an absorbing hobby, a search for adventure, or in helping others.

It is a good idea to have more than one interest so that we may switch our attention rapidly from one to another. It is important that our interest in business, profession, or hobby does not take up so much time that it invades our hours of relaxation, rest, and sleep.

A certain amount of physical activity is necessary for health. We need not worry about this in the always active and curious infant, or during the period of exuberance and seemingly endless energy in youth and adolescence. But it may become important to the student, and particularly to the adult who has to face the uncertainties of making a living.

Exercise stimulates growth and action of the muscles. It fosters coordination, im-

proves the circulation of the blood, and the elimination of body waste products. Exercise makes us feel better mentally as well as physically.

People who do not exercise are likely to lack the muscular strength to meet the ordinary demands of the day. They are almost certain to fail to meet unexpected crises that require brief spurts of energy.

The evils of complete lack of physical activity are most apparent in patients who became bedridden by illness or injury. Intensive rehabilitation is often necessary to overcome the profound wasting of bone and muscles which develops during prolonged inactivity.

Youth is the best period for exercise because it is then that muscles may be best developed. A child of five may have four hours of physical activity a day. The amount may be increased gradually to the age of ten when six hours of physical activity may be beneficial. Exercise may then be decreased gradually to the age of twenty, when two hours a day may be enough.

For those over twenty, one hour of exercise a day involving the large muscles of the body will probably be sufficient throughout the remainder of life or as long as health is maintained.

Exercise may increase the size of our muscles but we don't need to have enormous muscles to enjoy good health. On the other hand, most people need some exercise to attain the highest degree of well-being. In offering advice the needs and capacity of each individual must be studied before he is told how much and what kind of exercise he ought to have.

As a general rule, the best forms of exercise for relatively healthy people of various ages and background are walking, swimming, fishing, golf, and gardening. Ordinarily setting-up exercises in the morning or evening may also be recommended. The use of rowing machines, mechanical weights, dumbbells, and Indian clubs may be more attractive to others who have been advised by their physicians to exercise their large muscles.

A note of caution must be inserted here: If we are out of training or not accustomed by habit to physical exertion, it would be advisable to avoid competitive sports such as handball, football, hockey, baseball, squash, running, or other violent activities.

We may do ourselves great harm by taking part in such activities if we are not prepared adequately for them. Many persons getting on in years have collapsed and not a few have died of unwise exertions on tennis, squash, and handball courts.

Exercise is good for us. But we must not overdo it. Our age is important here. If there are any doubts about how much or what kind of exercise is best for us, our physician is the one to see.

Recreation, Breaks, and Vacations

Working too hard or too long at one task may make us lose interest in it. When we become bored or weary it is time to take a break, if we can. It need not always be long. A nap, a short walk in the open air, a leisurely meal in pleasant company, or only a coffee break or tea in the afternoon may be enough.

At other times a vacation may be necessary. Many who work in today's business or industrial world receive two days off a week, but because of the high speed and constant strain of modern society two days of rest may not be enough.

Vacations need not be long if we are healthy. Several short vacations may be more helpful than a single long one. They might consist of an extra day of relaxation at golf, in the woods, or on the trout stream. Sometimes it may be better to take a long weekend off. At other times a week or a month may be necessary.

However short the vacation, it should represent a break. At best, it should be a complete change of scene with new companions. It should take us away completely from our usual occupations and afford plenty of relaxation by day and long, comfortable sleep at night. It should be in the company of congenial friends. Most important of all, it should be arranged to avoid excesses in any form. Adults unaccustomed to strenuous exercise may be harmed seriously by overindulgence during vacation periods.

Mental Health and the Cultivation of Contentment

Happiness and contentment are essential to health. Some authorities believe that mental health is achieved by those who have learned how to balance their desires with what they know are their limitations.

To be happy we need to recognize our limitations and learn how to live with them. Happiness depends on freedom from worry and the ability to control undesirable emotions and desires or to exclude them from our consciousness.

Unhappiness, discontent, worry, and anxiety have profound effects upon physical health and may interfere seriously with the functioning of such important internal organs as the heart, stomach, or intestinal

tract. They may in this manner cause cardiac, gastric, or intestinal symptoms so realistic and convincing that we believe we have one or more of a wide variety of diseases.

A thorough examination by a competent physician may quickly reassure us that the distressing symptoms are merely the result of functional overactivity of the affected organ or part of the body, and that there is no need to worry about organic disease. Knowledge that there is no disease, only a functional disorder, is more than half the cure.

Conversely, too much knowledge, or rather pseudo-science is also dangerous. Today, false information on disease that is broadcast in radio and television commercials is a frequent cause of anxiety neurosis. Half the world consists of suggestible people, both males and females, who believe whatever they hear, regardless of the reliability of the source.

Psychosomatic Illness

In the past few years, the term "psychosomatic illness" has come into common use. It is, indeed, often misused as well. Some seem to believe that a psychosomatic illness is really not an illness at all but is the product of a person's imagination. Some believe that when a physician says a person has a psychosomatic illness he is really saying "there is nothing wrong that a little self-discipline won't cure." Such beliefs are erroneous.

Psychosomatic illnesses are real, they have identifiable causes, and appropriate cures. It is important to know that many different types of illness may be psychosomatic. A psychosomatic disorder is one in which a person has bodily symptoms that are related to an underlying emotional disturbance. The emotional disturbance may be the major cause in some instances, whereas in other instances it may serve merely to aggravate a pre-existing physical disorder.

The emotional and physical aspects of body function are intimately inter-related and almost any illness may be influenced by emotional factors. The treatment of even the most mechanical disorder—for example, a broken leg—may be influenced by the patient's emotional status and his determination to recover fully or his unresisting submission to his fate.

The term "psychosomatic disorder" is usually reserved for those illnesses where emotional factors commonly play a major role. Examples of such conditions are:

Gastrointestinal disturbances (peptic ulcer, gastritis, hyperacidity, pylorospasm, colitis, irritable colon)

Cardiovascular disturbances (hypertension, certain disturbances of heart rhythm, and certain disturbances of blood vessel tone, including migraine)
 Sexual disturbances (impotence and frigidity)
 Allergic disturbances (including asthma)
 Certain skin disorders.

There is an extremely wide range of differences among different persons with regard to these so-called "psychosomatic illnesses." Asthma in one patient may have a very strong emotional component, and an attack may be precipitated by almost any emotional disturbance. Another patient's asthma may flare up only on exposure to some offending substance such as animal fur. The first patient's asthma represents a psychosomatic disorder; the second patient's asthma does not.

Two Habits That May Harm Health

Life today is full of stress and strain. The problems of day-to-day living are often so complex that our nervous systems seem inadequate to cope with them. Two of the most common forms of trying to escape from these problems or to get temporary relief from them are smoking and drinking.

TOBACCO

More and more evidence indicates that excessive cigarette smoking is a cause of lung cancer. Many studies show that lung cancers occur much more frequently among cigarette smokers than among non-smokers and that the risk of lung cancer depends in part upon the number of cigarettes smoked.

In London, the Central Council for Health and Education has authorized distribution of a poster that quotes the following medical advice from the Health Officer: "It is my duty to warn all cigarette smokers that there is now conclusive evidence that they are running a greater risk of contracting cancer than non-smokers. The risk mounts with the number of cigarettes smoked. Giving up smoking reduces the risk."

There also is an increasing body of evidence tending to show that cigarette smoking helps to cause diseases of the circulation, particularly in the arteries affecting feet, legs, and heart.

There is also evidence that total death rates are increased among cigar smokers, although to a lesser degree than among cigarette smokers, and among pipe smokers, although to a lesser degree than among cigar smokers. Pipe smoking has also been associated with an increased incidence of cancer of the lip.

However, despite these recent disclosures, a legal ban on cigarette smoking or their manufacture and distribution would be unwise. In a democracy everyone has the right to know the facts. What an individual decides to do about them as they affect his health must depend largely on his own intelligence, understanding, and willingness to do what is necessary.

ALCOHOL

Medical opinion varies as to the danger from moderate consumption of alcohol. Man has been drinking alcohol in one form or another almost from the dawn of history and in virtually every area of the world.

It must be realized though that alcohol is a drug that affects the nervous system and, like all drugs, is a poison when taken in excessive amounts.

Small or moderate amounts may make us feel better because our inhibitions seem less important. Even with moderate usage, however, coordination and judgment may be impaired.

With larger doses, speech becomes thickened, vision is blurred, sensations are lost. Tremors, convulsions, unconsciousness, or even death may result from acute alcoholic intoxication.

Persistent excessive drinking leads to physical and mental deterioration, causes loss of appetite, irritates the stomach and intestines, interferes with the absorption of vitamins, and leads to deficiency diseases and cirrhosis of the liver.

It has been estimated that from 5 to 50% of fatal automobile accidents are due to the consumption of alcohol and that about 25% of all psychiatric patients give some history of alcoholic addiction.

There can be no doubt that misuse of alcohol is one of the great causes of unhappiness, discontent, and ill health. In any consideration of the rules of health and the responsibility of the individual for following them, the potential and actual evils of alcoholism must be emphasized.

If we don't drink, it is better not to start. If we do drink, the rule that applies universally to almost everything we do should be remembered—moderation. Drinking to excess is unhealthy. If drinking begins to interfere with normal eating habits, then the danger point is near and it is time to see a physician.

The Medicine Cabinet

Every family should have certain drug and first-aid supplies readily accessible for use. There are, however, certain basic rules which should be observed.

Sleeping pills and other substances that may be harmful in even moderate overdosage must be kept separately so that there will be no danger to anyone accidentally using the wrong medicine. In this connection, we should remember never to reach for medicines in the dark and use them without carefully examining the label.

Remember that almost any substance can be poisonous in overdosage and that children might innocently consume large amounts. Precautions against this possibility must be maintained. One method of accomplishing this is to keep only a few pills of any substance in an unlocked cabinet, and to keep the rest of the supply locked up.

The following is a list of suggested contents of a family medicine cabinet.

- Aspirin (adult and children's dosage)
- Sodium bicarbonate
- Paregoric
- Rubbing Alcohol
- Talcum Powder
- Calomine Lotion
- Local antiseptic (such as tincture of metaphen)
- A simple cathartic recommended by the family physician
- Gauze bandage (roll)
- Bandage compresses
- Absorbent cotton
- Fever thermometers (one mouth, one rectal)
- Petroleum jelly
- Bandage scissors
- Tweezers
- Eye cup

Self-Medication

A warning: Even an adult can do himself harm as the result of an unwise visit to the medicine cabinet. Self-medication can be extremely dangerous, and while the common sense use of simple remedies such as aspirin for a headache usually can be undertaken by any intelligent adult, extensive self-medication should be avoided. Two examples of common symptoms that should not be treated without medical advice are cough and abdominal pain.

A persistent cough may indicate a significant respiratory illness and should be the cause for a visit to a physician. Continued self-treatment with a patent cough medicine may serve merely to delay proper treatment.

Abdominal pain may indicate appendicitis or some other serious intestinal disturbance. The taking of a laxative as a routine measure may dangerously aggravate any existing condition. A physician should be consulted whenever there is severe abdominal pain.

The dangers of self-medication have been increased by the many commercial products that are presented to the public for over-the-counter sale in drug stores and by the flood of television, radio, and newspaper advertising that has accompanied these products.

Many persons are induced by advertising campaigns to purchase patent medicines for the relief of cough, for the assurance of bowel regularity, for the fortification of diets through vitamin and mineral supplements, and so on. It is quite probable that many of the persons who purchase these products do not need them and that those who do need them should consult a physician rather than undertake self-diagnosis and self-medication.

Personal Health Record

In recent years some physicians and professional groups have developed an interest in accumulating comprehensive life records of every individual that would provide a complete cumulative personal and medical history. A condensed version of this record may be given to every patient, to be presented to any physician in an emergency, or to school, camp, employment, or military authorities.

The large-scale development of such a program of comprehensive life records has been considered by the American Medical Association, but is at present a long way from practical realization.

However, it is quite feasible and desirable for a family to maintain a brief record of important health data for each of its members. Each individual's record should be compiled with the assistance of the family physician and should include the following information:

Birth date

Weight and length at birth, plus any usual features of delivery

Dates of all vaccinations and other immunizing injections (including boosters)

Date of all contagious diseases

Dates and descriptions of all surgical procedures and hospitalization for any reason

Mention of causes of death of parents and grandparents, and major diseases of these individuals.

Routine Immunization

The use of vaccines and other immunizing agents is a basic aspect of good medical care. Through proper immunization it is possible to prevent many of the serious infectious diseases that were formerly so prevalent.

There are several different schedules for immunization, any of which is entirely adequate. The exact schedule should be determined by a physician. In most communities, if a family does not have access to any practicing physician the local health department will provide the necessary childhood immunizations.

The following immunizations should be given to every child during the first six or nine months of life (details of the schedule to be determined by a physician):

- Pertussis (whooping cough)
- Diphtheria
- Tetanus (lock jaw)
- Smallpox
- Poliomyelitis (infantile paralysis)

Most of these immunizations require two or three injections, in series, for proper results.

In addition to the original immunizations, every child should have "booster" doses to assure continued immunity. Here, also, the specific time schedule should be left to a physician. In general, however, the following boosters are recommended:

Diphtheria—age two years and five years

Pertussis—age two years and five years

Tetanus—once every three to five years throughout life

Smallpox—age six years and twelve years

In addition, a "booster" dose of any of the above should be given upon possible exposure to that particular disease.

A recommended schedule for booster doses of poliomyelitis vaccine has not yet been determined.

There is no immunization measure that provides complete protection against measles, but the illness can usually be made less severe if "gamma globulin" is administered in proper dosage promptly after exposure.

Immunization when Traveling Abroad

When traveling outside the limits of the United States, immunization against various infectious diseases is recommended.

The exact requirements are subject to change, and should be ascertained at the time of application for a passport. In general, however, the following immunizations are recommended:

For all international travel: Smallpox, tetanus, typhoid and paratyphoid, in addition to those specified below:

For Communist Europe: Typhus

For Asia: Typhus, cholera, yellow fever

For Africa: Typhus, cholera, yellow fever

For South America: Yellow fever

For Oceania: Cholera, yellow fever

Problems of Health for the Aged or Retired

Intensive health programs have resulted not only in better living for the American people but also in remarkable changes in the age composition of the population.

There has been a steady increase in the population of this country; at present the rate is 3,000,000 a year. At the same time, the diminished death rate has rapidly increased the average life expectancy, which even at age 60 has risen to 17.5 years! The result has been a steady increase in the number of aged people. In 1900, about 4% of our population were 65 or over. By 1950, about 8% had attained this age. It is estimated that in 1980, about 15% of the population, or 25,000,000 persons, will be 65 or over.

For this group there are special problems in the maintenance of health. Persons over 65 need more than twice as much hospital care as those in the general population. The older person is subject to many emotional problems. Loneliness is common because of the high proportion who have lost marital partners, friends, and job associates.

Forced retirement also produces many of the problems of old age. At a time of life when medical needs are becoming greater, forced retirement results in termination of health insurance for many aged persons, or at least obliges them to start paying higher premiums out of limited retirement income. A much reduced schedule of medical care may result in neglect of ailments that might otherwise be promptly diagnosed and treated. The older person has thus been made useless by our society's philosophy of uselessness.

The prevailing philosophy concerning retirement of the aged and what to do for these senior citizens must be subject to critical analysis and careful planning if we are to meet the challenge.

Arturo Toscanini conducted his last symphony when he was well past 80. Goethe finished "Faust" after he was 80. Winston Churchill, Frank Lloyd Wright, the architect, and Pablo Casals, the cellist, continue active and productive beyond 80. These men of great ability have surpassed their contemporaries in achievements which should remind us that a man's or woman's period of usefulness need not end arbitrarily at 60 or 65.

At the present time there appears to be very little valid medical or scientific basis

for retirement at sixty-five. This age was adopted by insurance companies for measuring the mortality risks of insured persons. The insurance companies apparently chose this age because sixty-five was first written into the Social Security system in Germany in the 1880's.

This has also been the experience of the many social clubs established for older people by voluntary social agencies, philanthropic individuals, and settlement houses. Social contacts and useful work have broadened their horizons and led them to contentment and a happier, healthier old age.

In emphasizing the older person's capacity for independent living, socially and economically, we must not, of course, turn our backs on the steps taken to prevent the older person's becoming dependent. Social security payments, which represent a source of financial support to which the individual himself has made a substantial contribution during his wage earning years, have been most helpful. But retirement policies of industry and of labor unions must also become more flexible and more rational. Assurance of adequate medical care in old age is of major importance. If it cannot be provided by the expansion and liberalization of existing health insurance plans, it will be necessary to make it available through amendment of the Social Security laws.

Throughout our efforts to help the aged, we should emphasize a philosophy of helping them to help themselves. A rigid and doctrinaire paternalism will serve to undermine the individual's self-respect and capacity for self-care, just as total neglect of his needs will leave him to cope with social, economic, and medical problems that are beyond his capacities. Our older citizens are a major segment of our population—of us—and a segment that is growing yearly in size and importance. We must develop a positive philosophy toward this part of ourselves if our society is to achieve its maximum potential.

Rehabilitation

The alcoholic, the victim of a stroke, the victim of an accident, the blind, the paralyzed polio patient, the patient with heart disease, the neurologic patient, the amputee, the deaf, the epileptic patient—these and many others are possible candidates for prolonged dependence. This means not only physical dependence, but also financial dependence on family or on the taxpayer.

Until recent years, most of these people faced a bleak future. However, World War II presented many employers with a manpower shortage and, unhappily, also began

to deliver a supply of handicapped persons to the community.

Industry began to seek ways of using these handicapped individuals—and the new concept of physical and vocational rehabilitation began to take form. It soon became apparent that the rehabilitated worker was fully as dependable as his unimpaired co-workers—in some ways even more dependable.

Some disabled persons can be restored to full earning capacity; others to only partial earning capacity; still others may not be employable but may at least be restored to physical independence so that they can live with their families instead of being cut off from society in long-term institutions, where the community must bear the cost of their care.

There are over 2,000,000 persons in the United States who can and should be rehabilitated. These are people whose age and potential skills are well suited to productive employment, but who instead constitute a drain on their families' resources and on tax-supported community programs. More than 500 million dollars in tax funds are spent each year for the vocational rehabilitation and for the care and maintenance of disabled persons in this country who cannot be restored to any occupation.

By contrast, the 71,000 persons who were rehabilitated in 1956 increased their earnings from 19 million dollars to 129 million dollars. Although it cost about 50 million dollars to rehabilitate these 71,000 persons, they paid an estimated 11 to 12 million dollars in Federal income taxes (an additional amount in State taxes) during the first year after their rehabilitation, and will have repaid in taxes the entire cost of their rehabilitation in three to four years.

Their estimated productivity in subsequent years is such that during their remaining working years they will repay in taxes twelve times the cost of rehabilitating them. Add to this the importance of all these people's living happy, productive lives instead of their former wasted, unhappy existence—a chronic drain on the community.

The record of this country in achieving an annual rate of 70,000 persons rehabilitated is important, but we have far to go—because each year about 250,000 additional Americans become newly disabled by disease or by accidents.

Interest in the potentialities of rehabilitation has been of relatively recent origin. Personnel to carry out the necessary education and methods is as yet deplorably inadequate for the needs or demands of people in many parts of the country. The

most important center has become the Institute of Physical Medicine and Rehabilitation, whose splendid methods have been copied in varying degree by many smaller institutes in other cities. Those who find themselves in need of rehabilitation should consult their physician. They may inquire concerning facilities at the Institute of Physical Medicine and Rehabilitation in New York or at the Office of Vocational Rehabilitation of the Department of Health, Education and Welfare in Washington, D. C.

Use and Selection of a Doctor

When we feel well and energetic, we don't often think about doctors. It may be difficult for us even to imagine sickness or pain. But it is our common lot that gradually or suddenly illness will at some time overtake us. It may be because of accident, defects in our bodies, bad habits, or just insecurity or unhappiness. Sooner or later every one of us faces the question: Am I well? It is then that the need for a physician seems urgent.

Actually we ought not to wait until we are sick to see a doctor. Everyone, even the most healthy, needs from infancy to old age the advice of a skilled and trusted physician. When we are well, we should look to him for thorough, searching examination and for preservation of a record which will form an invaluable basis for comparison when later we are sick. We should depend upon him for necessary immunizations, for counsel when we are anxious or doubtful, for advice about activity, diet, and other adaptations to life.

It is useful and may be lifesaving to know as soon as possible if health is failing. Prevention is always better than cure and with the resources of modern medicine it is possible to limit or forestall the development of many serious illnesses.

Selection of an appropriate physician is not always easy. Our adviser should be wise in his profession, personally congenial, and deeply interested in our welfare.

Today all physicians in this country must have graduated from an acceptable medical school and must be licensed to practice either by the State or by the nation. In the eyes of the law all licensed physicians are equal and each is permitted to practice all branches of medicine, surgery, and midwifery. Actually, however, all licensed physicians are not equal in education, training, or skill. One doctor knowledgeable in one branch of medicine may be far from skillful in another.

It is no longer possible to find a general practitioner who can do everything nec-

essary in the maintenance of health and the cure of disease. But we can hope to find a doctor who will serve as family physician, friend, and guide, a man who knows us well and who can lead us through the intricacies of medical practice to whatever diagnosis and treatment may be needed. Only by great good luck can such an adviser be found by leafing through the pages of the classified telephone directory or from the casual advice of an acquaintance. Our family physician should be a graduate of a good medical school, a man who has had long postgraduate training in hospitals. In his practice he should have associated himself with a hospital of approved standing, with adequate laboratory and x-ray facilities, and with able medical specialists whom he will not hesitate to consult whenever his own skill and knowledge seem to him insufficient.

On many occasions we require the advice of a physician and all the resources that he can command. Each of us should be able at all times of need to obtain the best that modern science can offer in the prevention and cure of disease. We know, however, that medical care is both complex and expensive. In our program for preservation of health we must not only have available the best medical care; we must also be able to pay for it. Some recent developments in the practice of medicine have made these goals more nearly attainable.

Group Medicine

The need of combining skills in the practice of modern medicine has led to the formation of groups or teams of doctors with centers of operation in association with hospitals, private clinics, or insurance plans. In a center shared by doctors of diverse skills are assembled instruments, laboratories, and all the paraphernalia essential to the complete practice of medicine in its various phases. In most of these groups expenses and income as well as the use of facilities are shared by the participating doctors.

Teamwork which becomes possible under such an arrangement offers many advantages both to the patient and to the doctor. Under a single roof skills, techniques, and equipment of several medical and allied specialties can be assembled. The family physician, a member of the group, can refer his patients with impunity to one or more specialists of his group.

At the present time there are in this country more than a thousand groups of physicians practicing more or less in accordance with this pattern. Convenience and economy for doctor and patient are so obvious

ously superior to arrangements in solo practice that many new groups are being formed each year.

Health and Hospital Insurance

The expense of medical care and hospitalization has become so great that almost no one can budget for catastrophic or prolonged illness. As a result, there have grown up during the past thirty years many plans for partial or semi-complete health insurance.

The movement got under way during the depression which followed the stock market crash of 1929. It started with a small plan for insuring against hospital expense, which was organized for 1500 school teachers by the Baylor University Hospital in Dallas, Texas. The plan was found to be financially sound and was imitated almost immediately in many other places throughout the United States. This was the beginning of Blue Cross, which by 1939 had three million subscribers. By 1950 there were twelve million members in 63 plans, and in October, 1957, the forty millionth Blue Cross member was honored at a testimonial dinner.

In 1939, physicians in California devised a plan applying the Blue Cross community rate idea to provision of surgical care. Thus Blue Shield was born. This in turn has been widely copied and has extended rapidly over the entire country.

Through the years other somewhat similar plans for covering the expense of physicians' services have been developed: in New York by Group Health Insurance (GHI) and the Health Insurance Plan of Greater New York (HIP), in California by the Kaiser Permanente Foundation, and in many parts of the country by unions, commercial insurance companies, and co-operatives. By 1957, 111,000,000 Americans, or approximately 70% of the population, had some form of voluntary health insurance.

Unusually comprehensive coverage is offered by the Health Insurance Plan of Greater New York, which was initiated in 1947 to cover the needs of municipal workers but was so arranged that it could serve other groups of New Yorkers with similar medical requirements. In its eleventh year it has over 500,000 enrollees. For a premium considerably less than the average prevailing charge to private patients for an x-ray examination of the stomach and intestines, a single member of a group can obtain for a year all medical, surgical, and specialist attention from a partnership of physicians who maintain a strategically located and well-equipped

center in his district. He can be attended in the office, the medical center, the home, and the hospital. He can receive all necessary diagnostic, laboratory, and x-ray procedures. He can have eye examinations, visiting nurse service, ambulance service between home and hospital, health examinations, and immunizations, and other measures of preventive medicine. Hospitalization is provided through Blue Cross but professional care in the hospital is included as a benefit of the HIP premium.

This remarkable economy for the subscriber is possible in this and in other similar plans through utilization of well-organized group medicine with centralization of facilities and through spreading of costs by insurance in a relatively large population.

That such service may be of relatively high quality and includes effective measures of prevention is indicated by recent studies which show that the prenatal mortality rate in HIP practice is more than a third lower than the rate in New York City as a whole and more than 25% lower than the rate in the non-HIP private practice of the city. Further study showed that enrollees in HIP required hospitalization almost 20% less frequently than did persons enrolled as members of a local indemnity plan; that during a 12-month period 75% of HIP members saw a doctor, as compared with 57% for the general New York City population; that more enrollees in HIP have a regular family physician; that more of them receive annual health examinations; that 90% of HIP children under one year old receive their medical care from certified pediatricians, as compared with 50% for children of the same age in the general New York City population; that children in HIP receive an average of 15 services from their medical group physicians during the first year of life; and that 90% of them receive essential vaccinations during the same 12-month period.

Although no completely satisfactory plan for prepaid comprehensive medical service has as yet been developed, it is through perfection of such voluntarily sponsored prepaid insurance plans for comprehensive medical service by groups of physicians that we may hope to obtain in the future all of the benefits that modern medicine can offer at a price that most of us can afford to pay.

Community hygiene, the maintenance of healthy conditions in our environment, is the greatest factor in our unprecedented opportunity to enjoy health. The means by which healthy environmental conditions are maintained constitute one of the main structures of life today.

Community Hygiene and the Public Health

A LOOK at what the world was like before the development of modern medicine should prove helpful to anyone interested in his own health or that of his community.

In past centuries man lived in fear of pestilence, crippling from uncorrected deformities, and suffering from chronic illness, for which there was no relief such as modern medicine brings today. In addition to affliction with all the diseases to which human flesh is heir, inhabitants of Europe and America suffered a succession of frightful epidemics.

Today, a few other countries, such as Norway, the Netherlands, and New Zealand, share about equally America's opportunity to enjoy good health. But for millions in Asia, Africa, and some parts of South America, almost medieval conditions for exposure to infections still persist.

Malaria, which has practically disappeared in the United States, remains the

chief cause of death in many countries. Cholera, which is also practically nonexistent in the United States, is still a threat in Asia.

Typhus fever, although now relatively quiescent, is still widespread. Plague smolders in Burma, India, Indonesia, South America, Central Africa, Madagascar, and the Union of South Africa.

Tuberculosis, the incidence of which is declining in the United States and many European countries, continues to be one of the chief causes of death wherever overcrowding, poverty, poor housing, and filth are uncontrolled.

Outbreaks of typhus in Serbia, Russia, and Ethiopia, of plague in North Africa, as well as the highly fatal influenza epidemic of 1918, still emphasize the continuing danger from infectious diseases.

The steps by which we have attained our present state of health are so numerous that only a few can be mentioned.

Important Contributions to the Development of Health

In the history of medicine there have been many individuals who have made important contributions to the development of public health. Only a few of the highlights can be touched on here. For example, in 1688 Anthony van Leeuwenhoek was the first to see bacteria through a crude microscope. Edward Jenner performed the first vaccination in 1796, and in 1842 Crawford Long used anesthetic in Jefferson, Ga.

Florence Nightingale made her important contribution by publishing *Notes on Nursing* in 1859, and two years later Louis Pasteur described anaerobic bacteria, the start in a long series of discoveries in the microbial cause of disease. Joseph Lister introduced antiseptic surgery in 1867.

Among other important milestones were the discovery of the tubercle bacillus in 1882 by Robert Koch; the proof by Walter Reed and James Carroll in 1899 that yellow fever was transmitted by mosquitoes; the invention of salvarsan (a landmark in the development of chemotherapy) by Paul Ehrlich in 1909; Sir Alexander Fleming's discovery of the action of penicillin in 1928; Selman Waksman's introduction of streptomycin in 1942; and, in 1957, Jonas Salk's first effective vaccine for poliomyelitis.

Effects of applying the discoveries such as those listed above and many others are partially indicated by America's record of

achievement in the conquest of infectious diseases. This may be shown first by comparing the death rate of thirteen important groups of infections in 1900 and in 1956.

Mortality from Infectious Diseases in U. S., 1900 and 1956

The table below compares the death rate per 100,000 for the two years:

	1900	1956
Total death rate	1719.1	928.7
Death rate from infections		
Pneumonia and influenza	202.2	27.0
Tuberculosis	194.4	8.3
Dysentery and diarrhea	12.0	1.9
Diphtheria	40.3	0.0
Typhoid	31.3	0.1
Measles	13.3	0.4
Whooping cough	12.2	0.2
Scarlet fever	9.6	0.1
Syphilis	12.0	2.4
Malaria	6.2	0.0
Erysipelas	5.4	0.1
Tetanus	2.4	0.1
Rabies	0.1	0.1
Total	550.4	20.4

The infectious diseases that have been listed accounted in 1900 for about 30% of the total deaths of that year; in 1956 for less than 3%. In 1900, about 400,000 died of these infections; in 1956, despite

the enormous increase in population, only 31,080 died.

Infant and Maternal Mortality

Progress in control of infection may also be shown by study of deaths from child-birth and during infancy. Although in the United States statistics of infant mortality were not kept accurately until 1910, a great saving of life was evident. At the same time, with the control of puerperal infections, better anesthesia, and better prenatal and postnatal care, maternal deaths were dramatically reduced until at present in some hospitals with large maternity services an entire year may pass without loss of a single mother. The trend may be seen in the following table:

Infant and Maternal Mortality		
	1900	1956
Under one year		
White males	175.9	29.8
White females	142.6	22.5
Non-white males	369.3	58.1
Non-white females	299.5	46.0
Neonatal		18.8 E
Fetal		
Maternal		0.4

Incidence and Morbidity of Infectious Diseases

Mortality, or death rate from disease, presents only a partial picture of the state of health in the United States. Definite figures concerning incidence or attack rate and the extent of non-fatal illness from infections are available only in diseases for which reports are required by Boards of Health but are indicative of great improvement in the general health of the population. They do not portray the gratifying decrease in incidence of some other diseases, such as rheumatic fever, in which unquestionably decrease in incidence and in late consequences may be attributed in part to improvement in standards of nutrition, food, housing, and sanitation and in part to the control of streptococcal sore throat by prompt use of penicillin and other antibiotics.

Mortality from Chronic Diseases

From 1900 to 1956, while the death rate from infectious diseases was falling off rapidly, other forms of disease were becoming more important as causes of death. Heart disease, which in 1900 caused less than 10% of the total deaths, had by 1956 increased to almost 40%. The number of deaths from malignant disease rose similarly. Vascular lesions of the nervous system showed no increase in rate. Accidents, at present the fourth ranking cause of death, showed a moderate percentage in-

crease during the half century, with the automobile being responsible for an increase in the total number of deaths. Other important conditions, such as diabetes, congenital deformities, and cirrhosis of the liver, showed little difference in relative incidence. Some of these relationships can be seen in the following table:

	1900		1956	
	Rate	% Total	Rate	% Total
Total death rate	1719.1	100.0	928.7	100.0
Diseases of the heart	137.4	8.1	352.0	37.9
Malignant neoplasms	64.0	3.7	147.6	15.9
Vascular lesions of the central nervous system	106.9	6.2	106.6	11.5
Accidents	72.3	4.2	55.6	6.0
Diabetes	11.0	0.6	15.2	1.6
Congenital malformations	12.0	0.7	11.9	1.3
Cirrhosis of liver	12.5	0.7	10.8	1.2
	416.1	24.2	699.1	75.4

Unequal Distribution of Health Benefits

The benefits of health have not been evenly distributed in the population. A state with higher general living standards and more fully developed health facilities has much more favorable death and disease rates than other less fortunate districts. Throughout the country the white population has more favorable rates than the non-white.

Out of every 1,000 infants born in this country in 1900, 175 died as compared with 30 in 1950. But in one state in 1950 only 21 children died among each 1,000 born. In another during the same year 55 out of each 1,000 died. In one of our states the rate was 39 per 1,000 for the white population but 87 per 1,000 for the non-white population.

Out of every 10,000 births in 1920, about 70 mothers died, but in 1950 the average for the entire country showed death of only 8 mothers for each 10,000 live births. In one state the rate in 1950 was only 4 per 10,000, whereas in another it was 23, or almost 6 times as great. Among the non-white population of the latter state, the rate was 32 per 10,000.

In 1900, out of every 100,000 Americans, about 195 died of tuberculosis, while 50 years later this figure had been reduced to about 20 for the entire country. But in one state in 1950, only 7 out of every 100,000 died of tuberculosis. In another state during the same year, 35 out of 100,000 succumbed to the disease.

The Cost of Health

The health of America depends upon an adequate number of physicians, dentists, nurses, and related personnel in the places where they are needed. It depends upon all of the educational facilities necessary for their training and experience. It depends on a sufficient number of hospitals, laboratories, and health stations.

Provision of medical facilities and resources costs a lot of money. Some of the expense is borne by municipalities, states, and the Federal Government. Voluntary contributions and private philanthropy account for a part of the expense. But the largest part—about 70%—is paid for by individuals, either in direct payments to physician or hospital or through insurance.

The total spent in the United States for health services in 1955 was almost \$16,000,000,000, an amount that makes medical care one of the country's largest industries. The following table shows how the money for medical care was spent in that year:

Total expenditures for health services	\$15,948,900,000
Publicly supported care Federal, State, and local Governments*	4,676,900,000
Personal consumption expenditures†	11,272,000,000
Physicians' services	3,070,000,000
Hospital costs	3,130,000,000
Dentists' services	1,017,000,000
All other medical costs	2,308,000,000

Costs are still rising and in 1957 they hit a record high. Medical care rose more than all other major groups of expenses. In the 20 years from 1936 to 1956 the percentage increase for medical care was 134.7 as compared with 118 for all items. This was due chiefly, however, to increases in hospital rates, which rose 264.8% while fees of general practitioners increased only 72.8% and surgeons' fees only 59.5%.

In 1928, the value of hospitals in the United States was estimated to be \$3,500,000,000; in 1947, \$5,900,000,000, and in 1956, about \$13,000,000,000. Of the total in 1956, 80%, or about \$10,500,000,000, was estimated to be in physical plant, land, buildings, and equipment. The replacement figures for all this would be very much higher today, whereas the average cost of a hospital bed formerly was \$8,100, it is now about \$20,000.

Provisions for the Future

Objectives of medical care now far exceed the cure and alleviance of disease. More important are the early recognition for prevention of disease and the achievement of social efficiency for the individual, the family, and the community. Today there are in our society many important new forces. One of these is the unprecedented increase in our population which according to reliable estimates will have grown by 1980, less than 25 years from now, from 173,000,000 to 240,000,000. Another is the inevitable increase in numbers and proportions of our older citizens. Still another aspect concerns our attitude toward medical care and the increasing belief of many people that the opportunity for good health is a basic human right. This in itself increases the demand for the highest quality of medical service which will not be limited to present concepts and coverage but will extend itself to such subjects as health management in the community, to the care of chronic and mental illness, and to more extensive rehabilitation.

More doctors, more dentists, more nurses, and more ancillary personnel will be needed because of the rapidly increasing population and also because newer definitions of medical care and service require greater expenditure of time. More facilities are already required for the education and training of these professional and nonprofessional groups. They must be enormously extended to meet the needs of the next few decades.

Medical research has been the foundation of knowledge and practical resources in medical care. The table of landmarks in the development of health resources has shown how knowledge has been built up step by step by investigators of unusual talent and perception. Today we are not content to wait for the birth and emergence of geniuses. To accomplish most, we must depend more upon large numbers of trained and prepared scientists and upon group effort. Many more scientists must be trained and large amounts of money will be required for their education. Progress in knowledge of the causes, prevention, and treatment of mental illness, heart disease, cancer, and many other serious maladies will be made only by painstaking and prolonged investigation and by the efforts of many men and women. It can be and should be speeded by appropriation of large allotments of our national income.

* Publicly supported care (Federal, State, and local government) was taken from Research and Statistics Note No. 39, Sept. 13, 1956, U. S. Department of Health, Education, and Welfare, Social Security Administration, Division of Program Research.

† Personal consumption expenditures were taken from *Journal of the American Medical Association*, 162; 414 (Sept. 22, 1956.)

SPACE AGE NEWS

WHAT HAPPENED AND WHAT WILL HAPPEN

By

WILLY LEY

Looking Back at Year I of the Space Age

FOR YEARS most scientists had agreed that the Space Age would begin with the firing of an unmanned artificial satellite into an orbit around the earth. When the International Geophysical Year (IGY), which ran from July, 1957, to the end of 1958, was organized, it was decided that the first satellite shots should be undertaken during the IGY. But since this was an entirely new venture which might be delayed by multitudes of unforeseen and unforeseeable circumstances, no precise date was set.

It soon became clear, however, that the Russians were aiming for a specific date. It so happened that the centenary of the birth of the Russian space travel pioneer, Konstantin Eduardovitch Ziolkovsky, fell into the IGY. Ziolkovsky was born on September 5, 1857, at Ijevsk in the District of Vyazan. But this was according to the old style Russian calendar. With the Revolution, Russia switched to the western style (or Gregorian) calendar and it has become customary to re-date events in the Russian past as if the Gregorian calendar had been in use then. Hence, September 7 was considered to be Ziolkovsky's birthday and the Russian rocket experts wanted to shoot their first Sputnik—a term first used by Ziolkovsky in 1903 in its present meaning—in celebration of his one hundredth birthday.

Although it was claimed later that the first Russian artificial satellite was a "surprise" and that the Russians had prepared for it "secretly" this just was not so. In October, 1955, a few months after the announcement of Project Vanguard, Professor Kyrill Stanyukovitch published an article in a Russian magazine in which he stated that the Russian experts were thinking of bigger and heavier artificial satellites than Vanguard.

One year later the Russians became much more specific in their claims. Professor Georgi Pokrovsky stated that the Russian satellite would have a diameter of

24 inches (actual diameter of Sputnik I was 23.8 inches), that it would weigh more than 100 pounds (actual weight: 184 pounds) and that its intended orbit would have its low point or perigee at 185 miles and its high point or apogee at 810 miles. (The actual figures were 156 and 560 miles.) On June 2, 1957, *Pravda* stated in an article by Professor Alexander Nesmeyanov that the rockets, the instruments, and the equipment for the first artificial satellite "have been created."

Every one of these articles was reported by American newspapers.

Early in September, 1957, radio "hams" in the United States were informed by their Japanese opposite numbers that they (the Japanese) had been briefed by Russian radio stations on which wave lengths the Russian satellite would broadcast so that they could adjust their receiving equipment.

For reasons not yet known to us, the firing of Sputnik I was delayed from the obviously intended date of September 17 to the date of October 4, 1957. Russian scientists, when questioned, asserted that they did not have a failure on September 17 and intimated that they just had not been ready. Since they used a well-tested military missile for their satellite shot, this assertion sounds credible.

Propaganda Triumph

The firing of Sputnik I constituted an enormous propaganda victory simply because it was the first. The Russians followed up with another such propaganda victory in making Sputnik II (fired on November 3, 1957,) the first orbital animal experiment. Actually, Sputnik II was a kind of combination experiment: the artificial satellite consisted of a rocket nose cone holding a satellite like Sputnik I plus the animal capsule for the 11-pound dog Laika ("barker").

It would be ridiculous to maintain that

American prestige abroad did not suffer. In Europe the Explorer and Vanguard satellites are still called "American Sputniks" by the population even though the public prints use their proper names. It is now established that the then Secretary of Defense, Charles E. Wilson, did not think that the first artificial satellite would carry any value and refused to listen to people who tried to advise him. The official position was that the United States had a satellite project, called Vanguard, which would go into action if and when ready.

Near the beginning of Year I of the Space Age, the United States carried out a high-altitude space project, named Farside. Farside consisted of a four-stage solid fuel rocket which was to be carried by plastic balloons to altitudes greater than 80,000 feet and launched from there, shooting through the balloon which had lifted them. The reason for the balloon launch was to lift the rockets beyond the denser layers of the atmosphere so that they would not be retarded too much by air resistance. This was a very interesting idea which had been advocated in one form or another since 1923. The intended altitude for the Farside rockets was one earth radius, or about 4,000 miles.

The conditions for such an experiment were that the balloon launch take place as high as possible to minimize air resistance; that the balloon hang motionless at the instant of launching to insure vertical ascent for the rockets and, finally, that all four stages of the combination rocket be fired in quick succession. Unfortunately, Project Farside did not come off well. Of the six rockets of the experiment, four were failures, plain and simple. In one case, the balloon with the rocket suspended from it seems to have started a pendulum swing just at the proper moment, the proper *wrong* moment. In another case, it seems as if several stages ignited simultaneously. One rocket apparently performed as planned but its radio transmitter did not work so that it is not known how high it went. Only one was a limited success. Its radio transmitter failed to work at an altitude of 2,700 miles but the rocket is believed to have continued on its upward course for a few more hundred miles so that the probable peak altitude of this shot was 3,000 miles.

The Highest Yet

The Farside shots (which were not a part of the IGY) were made in September and October, 1957, over the Pacific Ocean in the neighborhood of Eniwetok atoll. Still the one Farside rocket that did turn out to be a reasonable success went higher

than any other rocket during Year I of the Space Age.

Meanwhile, the Vanguard Program had progressed through various generally successful shots with preliminary test vehicles. These preliminary test vehicles were labelled TV while the satellite launching shots to follow had the designation SLV for satellite launching vehicle. (See: Table.) The general concept of the Vanguard rocket was this: the first stage, with liquid fuels, was to be mostly just a powerful booster, guided by equipment in the second stage. The second stage then was to increase the velocity, supplying the guidance and to position the solid fuel third stage. This third stage was to supply the velocity needed to bring the artificial satellite to orbital velocity.

The first stage had been test-flown repeatedly and the third stage had also made a test flight. But only the second stage, labelled "all-important" by the men of the project, had not been test-flown. It was to be tested in the first shot of the full three-stage vehicle. Since this was still considered a test, the rocket was not supposed to carry the fully instrumented 20-inch spherical satellite but was given a small 6¼ inch test satellite instead. Everybody concerned with the project used carefully selected language. For example, the Navy always labelled the Vanguard rocket a "vehicle," the reason for using this word being that it was to be made clear that this rocket was not a "missile." (But the use of the term "vehicle" resulted in many letters from the public asking who was to ride it.) Likewise the Vanguard shot was called a "test" by everybody concerned. But the label did not mean anything at all to world opinion. So far as people everywhere, including those in the United States, were concerned this now was the American satellite shot. After all, two Russian satellites were in orbit at the time.

The Vanguard test was slated for December 4, 1957. There was an endless countdown with multitudes of interruptions. Finally the test had to be called off because the crew was absolutely exhausted. Another attempt was scheduled for only two days later, December 6. There was every reason to be very apprehensive. When there are as many interruptions in the countdown as there had been on December 4 the thing to do is to take another rocket. Besides, this was the first test flight of the second stage.

Catastrophe

Of course every reader will still remember that the attempt ended in catastrophe, but, strangely enough, the catastrophe was not caused by the untested second stage.

TRIALS AND TRIBULATIONS OF PROJECT VANGUARD

Designation	Date	Result and Remarks
TV No. 0.	Dec. 8, 1956	Test Vehicle No. 0 was Viking No. XIII. No upper stages. Altitude 126 mi., range 183 mi. Successful.
TV No. 1.	May 1, 1957	First stage (Viking No. XIV) and third stage only. Altitude 120 mi., range 450 mi. Successful.
TV No. 2.	Oct. 23, 1957	Vanguard first stage with dummy second and third stages. Altitude 109 mi., range 330 mi. Successful.
TV No. 3.	Dec. 6, 1957	Full three-stage Vanguard with 6-in. satellite. Failure during lift-off. Rocket settled back and exploded, damaging launching pad.
TV No. 3. Back-up	Feb. 5, 1958	Full three-stage Vanguard with 6-in. satellite. First stage only one to fire. Rocket broke apart in mid-air 60 seconds after lifting.
TV No. 4.	March 17, 1958	Full three-stage Vanguard with 6-in. satellite. Completely successful, satellite in orbit.
TV No. 5.	April 28, 1958	Full three-stage Vanguard with 20-in. satellite. Altitude 340 mi., impact 1500 mi. from Cape Canaveral. Failure because third stage did not ignite.
SLV No. 1.	May 27, 1958	Complete vehicle with 20-in. satellite. Second stage pointed up instead of moving horizontally. Satellite reached 2200 mi. peak altitude. Impact 7500 mi. from Cape Canaveral, ocean east of South Africa.
SLV No. 2.	June 26, 1958	Complete vehicle with 20-in. satellite. Second stage cut off prematurely, third stage did not fire. Unsuccessful.
SLV No. 3.	Sept. 16, 1958	Complete vehicle with 20-in. satellite. Cut-off at instant of ignition. No take-off.
SLV No. 3. Repeat	Sept. 26, 1958	Same vehicle. All three stages fired, too steep, no orbit achieved. Performance similar to SLV No. 1.

but by a mechanical failure in the first stage, something nobody had expected. At the moment the rocket lifted off the launching pad, one of the hydraulic actuators burst, probably causing additional damage. The rocket lost power, settled back tail first, split open and the fuel exploded. The fire severely damaged the launching pad and there was only one pad provided for the Vanguard rocket. The necessary repairs to the pad alone caused a considerable delay.

Army Gets Its Chance

After the much-publicized and spectacular failure of this launching the new Secretary of Defense (McElroy) ordered the Army to go ahead and try for a satellite shot with its Jupiter-C rocket. Under strict military protocol it is correct to say that the Army was "ordered" to do so. Non-military language expressed the true situation much better; the Army, at long last, could do what it had wanted to do for about two years.

The Jupiter-C rocket had already proved itself by throwing its top stage to a distance of 3,300 miles. The rocket consisted of a somewhat elongated Redstone rocket as the first stage, topped by several "clus-

ters" of a solid fuel rocket which is variously called "Baby Sergeant" or "Recruit," since it is a scaled-down version of the Army's Sergeant solid fuel rocket.

The second stage of the Jupiter-C rocket consists of a ring-shaped "cluster" of these rockets. The third stage is another cluster inside the second stage and the fourth stage is a single such rocket on top of the third stage. The firing procedure is that the liquid fuel first stage lifts the upper stages to a great height. Then the upper stages separate from the burned out first stage and are permitted to coast freely for a number of seconds until they have the proper position. Then they are ignited by radio signal and burn in quick succession. The top stage reaches orbital velocity.

Prior to take-off, all the upper solid fuel stages are made to rotate rapidly, as a stabilizing measure. For the purpose of shooting a satellite, the first stage used a different fuel, called hydine, which promised a longer burning time for the same tank volume. This fact required another modification. The fuel pumps of the rocket are driven by decomposing hydrogen peroxide (H_2O_2) which, when catalytically decomposed, generates hot steam. But the peroxide tank for the rocket had the nec-

essary dimensions for holding enough for the shorter burning time of the ordinary fuel. To make the longer burning time possible, a second peroxide tank had to be added.

There was one other problem. The instruments developed for Vanguard were not too heavy for the Jupiter-C, but the Jupiter-C could not accommodate a 20-inch sphere. The instruments, therefore, had to be re-arranged into a cylindrical shape which could be put on top of the fourth stage without noticeably increasing the overall diameter of that stage.

Rocket Separation

It is necessary to digress for a moment at this point to explain in as few words as possible some of the discussions that had taken place prior to any actual satellite shot. One of these discussions centered around the term "separation." The old-time rocket men, when considering a satellite shot, usually just thought of instruments in the nose cone of the rocket. But these instruments had to be telemetered, which means that an automatic transmitter would radio their readings to the ground. At one point, some of the electronics experts began to express doubts. If the instrument package with its transmitter remained attached to the rocket there might be difficulties with telemetering. It might be advisable to build things in such a way that the instrument package, after reaching the orbit, was separated from the top stage of the carrier rocket.

This was not difficult to do. For Vanguard, a device was developed which consisted, in principle, of a spring pushing the satellite away from the rocket. There were certain safety mechanisms; for example the whole mechanism would be made "ready" to work only by the high acceleration of the third stage. The old-time rocket men thought that this was not necessary, but if somebody wanted to do it they did not object too strongly. In the case of Vanguard this device took half a pound of weight away from the satellite itself.

There must have been similar discussions in Russia. Sputnik I was fired with separation. Sputnik II did not have separation. On our side Vanguard has separation and Explorer does not. Both work.

The other discussion was something more serious and had, strangely enough, originated in a somewhat roundabout way. When, some eight or ten years ago, rocket enthusiasts began to advocate satellite shots they were usually confronted with two questions. One was: "How can you be sure that the top stage of such a rocket

will be fast enough to go into orbit?" The other was shorter and more to the point. It was: "How much will it cost?"

That second question was much harder to answer, but there was a way out. If it was possible to show that a combination of existing rockets could reach satellite velocities the question about the price was answered too. For the cost of these existing rockets was known—though possibly not to the public or even to the engineer who had dreamed up the combination—and the expense for the whole could, therefore, be estimated.

The method of combining existing rockets came to be called "shooting with off-the-shelf hardware" and as discussion progressed it came to be realized that this off-the-shelf hardware idea had another strong point in its favor. Just because the rockets would be "off-the-shelf" they would be well-tested rockets, rockets with a high degree of reliability. The opposite point of view was that a rocket especially designed for the purpose would be more efficient.

History has been nearly 100% on the side of the off-the-shelf advocates.

Since the Jupiter-C was to be considered an off-the-shelf rocket the chances for its success were good. And the Jupiter-C did put the first American artificial satellite into orbit on January 31, 1958.

Astronomical Designation

For quick reference it was desirable to devise a system of designating artificial satellites. A suggestion made by Professor Fred L. Whipple of Harvard Observatory and based on the customary system of designating comets was generally adopted.

The first artificial satellite of any year (regardless of its "nationality") is designated by the first letter of the Greek alphabet, Alpha. The second satellite is called Beta, the third one Gamma and so forth. Sputnik I logically, became "1957 alpha," Sputnik II became "1957 beta" and Explorer I became "1958 alpha." But if there is separation, a single shot will place more than one body into orbit. In the case of Sputnik I there were three bodies: the nose cone which had protected the satellite on its way up through the atmosphere, the satellite itself, and the top stage of the rocket which carried it up. In such a case numbers follow the Greek letter and the sequence of these numbers is based on the visual brightness of the object. Again in the case of Sputnik I, the brightest looking object was the rocket itself, since it was the largest. So the rocket was "1957 Alpha 1," the satellite "1957 Alpha 2," and the nose cone

ARTIFICIAL SATELLITES

Name	Designation	Firing Date	First perigee (miles)	First apogee (miles)	Orbital period (minutes)	Inclination of orbit	Satellite weight (pounds)	Total weight in orbit (pounds)
Sputnik I.	1957 alpha	Oct. 4, 1957	156	560	96	65°	184.3	ca. 1100
Sputnik II.	1957 beta	Nov. 3, 1957	145	1056	103.7	65°	1120	ca. 7000
Explorer I.	1958 alpha	Jan. 31, 1958	219	1575	115	35°	18.1	30.8
Vanguard I.	1958 beta	Mar. 17, 1958	220	2513	135	35°	3½	29
Explorer III.	1958 gamma	Mar. 26, 1958	120	2100	121	35°	18.1	30.8
Sputnik III.	1958 delta	May 15, 1958	123	1160	106	65°	2925	ca. 7000
Explorer IV.	1958 epsilon	July 26, 1958	178	1368	110	51°	25.7	38.4
Sputnik IV.								

NOTES:

- Sputnik I. Top stage rocket suffered burn-up during first week of December, 1957, the satellite during first week of January, 1958.
- Sputnik II. Suffered burn-up on April 13, 1958, after completing 2366 revolutions.
- Explorer I. In orbit, lifetime of several years.
- Vanguard I. In orbit, lifetime of about two centuries.
- Explorer II. Fired March 5, 1958. Fourth stage failed to ignite, no orbit achieved.
- Explorer III. Suffered burn-up on June 27, 1958.
- Sputnik III. In orbit, might have burn-up early in 1959.
- Explorer IV. In orbit, lifetime of several years.
- Explorer V. Fired August 24, 1958. Failed to orbit because of freak accident, collision in mid-air of first stage with upper stages after separation.

(which was so hard to see that it was soon lost) became "1957 Alpha 3."

The second satellite of 1958 was a Vanguard test satellite. The third stage of that Vanguard rocket became "1958 Beta 1" while the satellite itself is "1958 Beta 2." (The Vanguard rocket sheds its nose cone on the way up; it does not go into orbit.)

What Has Been Learned

The lessons of the first artificial satellite, Sputnik I, seem to have been more political than scientific. Until the results of the telemetering are made known the main scientific lesson of 1957 Alpha was a revision of our ideas about the density of the atmosphere at high altitudes.

It turned out that the atmosphere, at an altitude of 150 miles, is several times as dense as had been thought. This statement, though correct, is unfortunately apt to be misleading because it can give the impression that there is a considerable amount of atmosphere left at that altitude. This is not so. The atmosphere is incredibly thin and many so-called vacuum tubes on the ground contain more residual atmosphere than the real atmosphere at that height. But it is denser than had been believed.

Lessons from Laika

The main lesson of Sputnik II was taught by the dog Laika. A little background is necessary here. Scientists had known all along that a man in a rocket would undergo two different sensations in succession. While the rocket motors are burning he would be under high accelera-

tion. This could be tested in the laboratory by means of a large centrifuge, which could be made to imitate precisely the degree and duration of the acceleration that would be experienced in actual flight. (The results of the tests were that there is no danger from the high acceleration). As soon as the rocket motors would stop burning, however, the acceleration would not drop to one-g (one gravity, the force we normally experience on the ground) but would drop to zero-g. This could be imitated in the atmosphere by a specific flight maneuver with a jet plane. But the duration of the test was limited to about 32 seconds, usually less. While it was found that 32 seconds of apparent weightlessness did no harm, it could not be concluded that 32 minutes would be harmless because 32 seconds were. Nor, going farther afield, could one conclude that 32 hours would be harmless because 32 minutes were.

It must be stressed that nobody could think of a reason why prolonged weightlessness should cause harm, but there was no proof that it would not. The dog Laika stayed alive and, so far as one can tell from the telemetered heartbeat, unharmed for about 100 hours.

Sputnik II also discovered what is now called the "radiation belt" but at first the telemetered instrument readings were so surprising and therefore confusing, that the Russian scientists were inclined to blame the readings on instrument failure.

Explorer I is, for this reason, usually said to be the satellite that discovered the "radiation belt." The discovery was confirmed by Explorer IV.

Before going into the problem of the radiation belt a few other experiments of the first year of the Space Age must be mentioned. Vanguard I is a small test satellite which confirmed another prediction. Several years ago the so-called "silicon batteries" or "solar batteries" were developed. They consist of thin wafers of the element silicon with high purity essential for the result and they convert light rays directly into electric current. The Vanguard test satellite carries such silicon batteries and they perform in space as predicted.

Three experiments which bear some similarity to Laika were performed by the U. S. Air Force. The experiments were called MIA, which stands for "mouse in Able." The Air Force was testing re-entry of nose cones into the atmosphere with the Thor Able rocket over very long ranges. Each of the three nose cones carried a mouse. Though none of the cones was recovered it is known that the mice stayed alive until

impact in the ocean because their heart beat, like Laika's, was telemetered.

The "Radiation Belt"

The most important single discovery of the artificial satellites is the so-called "radiation belt." The name is somewhat misleading because it is not a "belt" around the earth but rather a hollow shell which starts with fair suddenness at an altitude of about 500 miles.

The way the discovery was made was as follows: Explorer I was instrumented to report on several things. One of them was the temperature of the skin and another was the temperature of the inside of the satellite, which might be called its "cabin temperature." Now a satellite in orbit around the earth will be warmed by the radiation from the sun on one side and will radiate some of this heat away on the other side. When in the shadow of the earth it will not receive any radiation (except the small amount radiated into space

PICTOGRAPH CORPORATION

RADIATION SHELL

by the nightside of the earth) while the satellite, when over the daylight side of the earth, will receive an extra dose of heat because it is in the sunlight with the earth behind it acting as a reflector. The cabin temperatures of Explorer I turned out to range from a low of about 45° Fahrenheit to a high of about 85° Fahrenheit.

Another device in Explorer I was to measure radiation other than light and heat. This device stopped reporting at intervals and it was soon noticed that it reported when comparatively near the earth in its orbit and stopped reporting when it was farther away. After a little time, Dr. James A. Van Allen had the idea of subjecting another set of satellite instruments to heavy doses of X-rays in the laboratory. Maybe the instruments in the satellite were overloaded with radiation. They were.

Physicists immediately concluded that this had to be what is known under the German term of *Bremsstrahlung*. The second part of this word "strahlung" means radiation, while the first part means "to brake." The term had been coined originally by Professor Konrad Roentgen, the discoverer of X-rays. His X-ray tube consisted of a stream of free electrons, which are shot through a vacuum to hit a metal plate called the target. In the target the electrons are stopped and X-rays are emitted. A useful English equivalent of the word *Bremsstrahlung* would be "impact radiation"—radiation caused by the impact of sub-atomic particles.

An artificial satellite obviously produced a kind of X-ray tube effect. It moved through a vacuum where free electrons are present and it becomes the target of these electrons. Naturally it begins to produce X-rays.

The current scientific explanation of the radiation shell is as follows: large numbers of electrons (and probably of protons too, although this is not yet established) are emitted by the sun. If the earth did not have a magnetic field, these electrons and protons would simply enter our atmosphere and would disappear in the atmosphere much in the manner in which rain drops disappear in the ocean. But because of the earth magnetic field, these particles are trapped. They become concentrated some distance from the ground, the lower limit of that concentration being around 500 miles. It is highly probable that these concentrations of particles do enter the atmosphere where the magnetic field permits them to do so. This is near the magnetic poles of the earth. The whole somewhat resembles a river that has been dammed up, with the earth's magnetic field providing the dam.

Above that dam the particles accumulate, being steadily replenished by the sun. Over the magnetic poles they drain into the atmosphere, causing the aurorae in the process.

Preview of Year II

The most urgent job that has been handed to the second year of the Space Age by the first year is obviously the exploration of the radiation shell. A good deal has been found out about it by the lunar probe Pioneer, which, even though it did not reach the moon, should be considered a very successful shot.

But for thorough exploration of the radiation shell, a specially instrumented satellite would be superior. It should be placed into a very elongated orbit with a perigee some 200 miles up and an apogee about 12,000 miles away. This satellite would then go below and above (or outside) the radiation shell during every circuit. Its orbital period—the time it needs to complete one trip around the earth—would be almost precisely 5½ hours. Ideally the research job should be done by two satellites, one of them over the equator of the earth in the long orbit just mentioned and another one which goes over both poles.

The orbit of this polar satellite should be as nearly circular as it can be made, and it should be quite close to the earth, say 250 miles out. If the theory that the radiation shell "drains off" over the magnetic poles is correct, it would go through two "radiation funnels" each time, one over the magnetic pole in the north, the other over the magnetic pole in the south.

Other problems for the second year of the Space Age are the "cloud cover satellite" and the "maximum visibility satellite." The latter would be simply a satellite which is as large as possible for its weight: an inflated balloon thrown into an orbit. Preliminary work on this type has already been done.

The "cloud cover satellite" will be of the greatest importance to climatologists for theoretical reasons and to weather research for practical reasons. At present, it is impossible to establish how much of the earth is under a cloud cover at a given moment. Not only is it impossible to establish this for a given moment; it is even impossible to establish it in retrospect for a given day, or for any day for that matter. It can't be done because three quarters of the earth's surface is water where there are no weather stations. And even most of the land surface is without weather stations. But the problem could be solved by a specially instrumented satellite in orbit.

The Coming Flight of the X-15

One of the experiments of the Space Age's second year is going to be one in which a man will experience, for the first time, weightlessness lasting at least ten minutes, possibly a few minutes longer.

The 32-second weightlessness experiments mentioned earlier were made with jet trainers. The method consists in putting the plane into a shallow power dive to give it as much speed as possible. Then the nose of the plane is pulled up and the engine cut to nearly zero at the same instant. The plane will then go through an arc like a thrown stone. While in this arc everything is weightless because the plane follows the pull of the earth's gravitational field without resisting it in any way. And weight, which is not generally realized, is the result of resisting the gravitational pull. It is not caused just by the presence of gravitational pull.

Another way of producing the same effect would be to point a plane up at a slant and make it gather speed on an ascending leg. Then, if engine power is cut, the plane will continue to ascend for a while, just like the plane which gathered its speed by going into a power dive and pulling out of it. Normal airplane engines are not powerful enough to execute such a maneuver, but a rocket-propelled plane can. The X-15 is a rocket-propelled research plane built for such an experiment.

It will be carried first to 40,000 or 45,000 feet by a bomber. Then it will be dropped. While the bomber turns away the pilot of the X-15 will ignite his rocket motors and start climbing. Of course there are going to be many preliminary tests but in the final experiment the pilot will hold his plane on an ascending flight path until its fuel supply is exhausted. The plane should be carried by momentum to a maximum altitude of 100 miles, resulting in both a high altitude record for manned flight and in weightlessness lasting for at least ten minutes.

Another experiment with a man in it is planned but still lacks official approval. In this test, a man would be in a capsule in the nose of a large rocket. The rocket would make a nearly vertical ascent to an altitude of around 200 miles. Then rocket and manned capsule would be separated and they would fall back to the ground more or less side by side. But when they enter the atmosphere the rocket would keep falling while the manned capsule would be retarded by all kinds of air-braking devices. Finally it would land by parachute.

The Russians have made a rather similar experiment with dogs which returned safely. This shows that it can be done.

The reason for using a volunteer pilot after it has been established that the experiment is safe is a simple one. Dogs or other animals can be instrumented. It is possible to telemeter their heartbeat, their rate of breathing, their blood pressure and several other things. All this provides medical experts with the information of how the body reacts. But only a man can tell how it feels.

The Shot to the Moon

Officially, moon rockets are called "lunar probes" and the second year of the Space Age will see at least four American attempts to reach the moon with a lunar probe.

The principal natural law which governs a shot to the moon is easy to explain. If you drop a body from a height of one mile it will strike the ground with a certain impact velocity. If you drop the same body from a height of two miles it will strike the ground with a higher impact velocity. But the impact velocity will not be twice as high. In other words the impact velocities increase more slowly than the altitudes. Hence there must be a finite impact velocity even for a body falling from infinity. This impact velocity would be very nearly 7 miles per second.

Since it takes the impact velocity to throw a body to the same height which caused this impact velocity the velocity of 7 miles per second has been called "escape velocity," a body leaving the earth with this velocity would be capable of going an infinite distance; hence it would escape from the earth.

Since our moon is only 239,000 miles away and not an infinite distance, it takes in theory, a little less than escape velocity to throw a body to the moon. But the difference is so minor that it is swallowed up in the safety margin which an engineer would build into his rocket so that we might go on assuming that the rocket has to reach escape velocity.

Naturally this velocity must be reached outside the atmosphere, say 250 miles up. Let's assume that the rocket has escape velocity at the 250-mile level and the rocket motors stop burning. The rocket will continue to rise, but it will not maintain its velocity. At the surface, the earth's gravitational pull amounts to 32 feet per second for every second elapsed. For the 250-mile level the figure reads 28.6 feet per second for every second elapsed. This means that at the end of the burning period the upward velocity of the rocket is 7 miles per second. One second later it is 7 miles minus 28.6 feet per second. At the end of the next second it is another 28.6 feet per second less and so forth.

MOON SHOT FOR IMPACT

As the rocket reaches greater distances from the surface the earth's gravitational pull grows progressively weaker. But weak or not, it is still there. However, at a distance of about 211,000 miles from the earth's surface (or 23,500 miles from the surface of the moon) another factor enters into the picture, namely the moon's gravitational attraction. At that distance the moon's pull in one direction and the earth's pull in the opposite direction become equal. Once the rocket has crossed that line it falls toward the moon, pulled by the moon's gravity. It would strike the moon's surface just about four days after the rocket motors stopped burning.

It is impossible to give a precise figure because that would differ from case to case. In the first place the moon is not always the same distance from the earth. In the second place the rocket may have a somewhat higher velocity than 7 miles per second. If the moon is especially near (say that the surface to surface distance is about 220,000 miles instead of 234,000 miles, which is the mean surface-to-surface distance) and the rocket considerably faster than 7 miles per second, the time required for the transit might be down to $2\frac{1}{2}$ days.

In either case the rocket would have to be aimed not at the moon but at the point in the sky where the moon will be $2\frac{1}{2}$ or 4 days later.

First Lunar Probe

On August 17, 1958, the first attempt to reach the moon with a lunar probe was made. It was to be a shot with a $2\frac{1}{2}$ -day transit period and the rocket was a modified Air Force Thor-Able rocket, standing 88 feet tall on the launching pad. The first stage was a standard liquid fuel Thor rocket. The second stage was an "Able" rocket (also liquid fuel) while the third stage, needed to produce escape velocity, was a solid fuel rocket. On top of that there was the payload which included a fourth rocket, the function of which will be explained shortly.

The attempt failed because of one of those random mishaps which cannot be predicted beforehand and which can hardly be explained afterwards. Seventy-seven seconds after take-off a fuel line burst in the first stage, leading to an explosion.

Now for the fourth rocket which was part of the payload. In order to explain its

LUNAR PROBE

function we have to find out first what would happen if a moon rocket missed the moon by a few thousand miles. In such a case the moon's gravitational pull would force the rocket to loop around it. But the moon's gravitational pull would not be strong enough to hold the rocket. It would be a single loop, a "hairpin curve." If the moon did not move, that curve would be one for which mathematicians have a name, a hyperbola. But because of the moon's movement in its orbit (amounting to 0.6 miles per second) this curve would be distorted so that it cannot be designated by a simple term. At any event, the second leg of that hairpin curve, the so-called "escape leg," would point in the general direction of the earth but would miss the earth by a wide margin.

The reason why the moon could not hold this rocket and force it to become a "moon's moon," a secondary satellite, is very simply that the rocket would be too fast. If the moon is to "capture" it, it must move not faster than $\frac{1}{2}$ mile per second parallel to the moon's surface.

This is what the rocket in the payload was to accomplish. It was mounted "up-

side down" so that it would fire in the direction of its movement. The shot was planned in such a way that this "retro rocket" would fire at the moment when the whole payload started its loop around the moon. The retro rocket would have reduced the velocity sufficiently so that the moon could have captured it as a secondary satellite.

While the first lunar probe of Aug. 1, 1958, was a failure because of a mechanical mishap, the second lunar probe, called Pioneer, of Oct. 11, was a nearly complete success. The rocket was fired from Cape Canaveral at 3:42 A.M., Eastern Standard Time. Twelve hours after take-off, it was 65,000 miles up; but at that time it began to look as if the rocket were off course and would not make a rendezvous with the moon. Naturally, the rocket's speed diminished all the time, just as could be expected, but 24 hours after take-off it became clear that the speed was even less than it should be. The indication was obvious; the rocket, during take-off, had not quite reached the necessary velocity to reach the moon. Preliminary calculations indicated that the "speed shortage" was less than 1,000 feet per second. Not much

as rocket velocities go, but enough to change the whole picture.

Twenty-seven hours after take-off, the maximum distance from the earth was reached. It was 79,173 miles. Then the rocket fell back and suffered burn-up over the Pacific Ocean at about midnight on Oct. 12, having been in space for about forty-three hours. It climbed about thirty times higher than any other rocket ever had.

After it became certain that the rocket was falling back, several attempts were made to fire the still unburned retro rocket. If it had fired, its power would have changed the fall into a very large satellite orbit at a distance of about 30,000 miles from the ground. But the firing mechanism did not respond to the radio command.

However, much had been accomplished, even though no reading from altitudes below 18,000 miles were received. At that altitude the figures for radiation read *Zero*, the rocket was clearly outside the radiation shell. Additional research will have to establish the upper limit.

More lunar probes are ready. There can be little doubt that one of them will succeed during Year II of the Space Age.

The Planetary Probes

The term "planetary probes" has been chosen as a designation for devices which are supposed to leave the earth and to go to one of the neighboring planets. Such planetary probes could either be put into an orbit around the earth first and then go on from there. Or else they could be sent to the neighboring planet from the earth's surface directly.

To understand the principles behind the flight of a planetary probe it is practical to think back to the lunar probes. A lunar probe needs a velocity of 7 miles per second to escape from the earth and to reach the orbit of the moon. If the moon then is at or near the same point of its orbit when the lunar probe arrives either an impact or a capture will take place. What would happen if such a lunar probe, capable of reaching 7 miles per second, were fired into space in such a direction that it will miss the moon by so much that the moon's gravitational attraction will not influence it at all? Then the probe, being fast enough to escape from the earth's gravitational field, will not return to the earth because of the earth's gravity, though a return to earth, as we'll see, will take place eventually for other reasons. But while such a probe is fast enough to escape the earth's gravity it is not fast enough to escape the sun's gravity. The probe, therefore, will go into an orbit around the sun; it will become a small planet.

Astronomical Unit

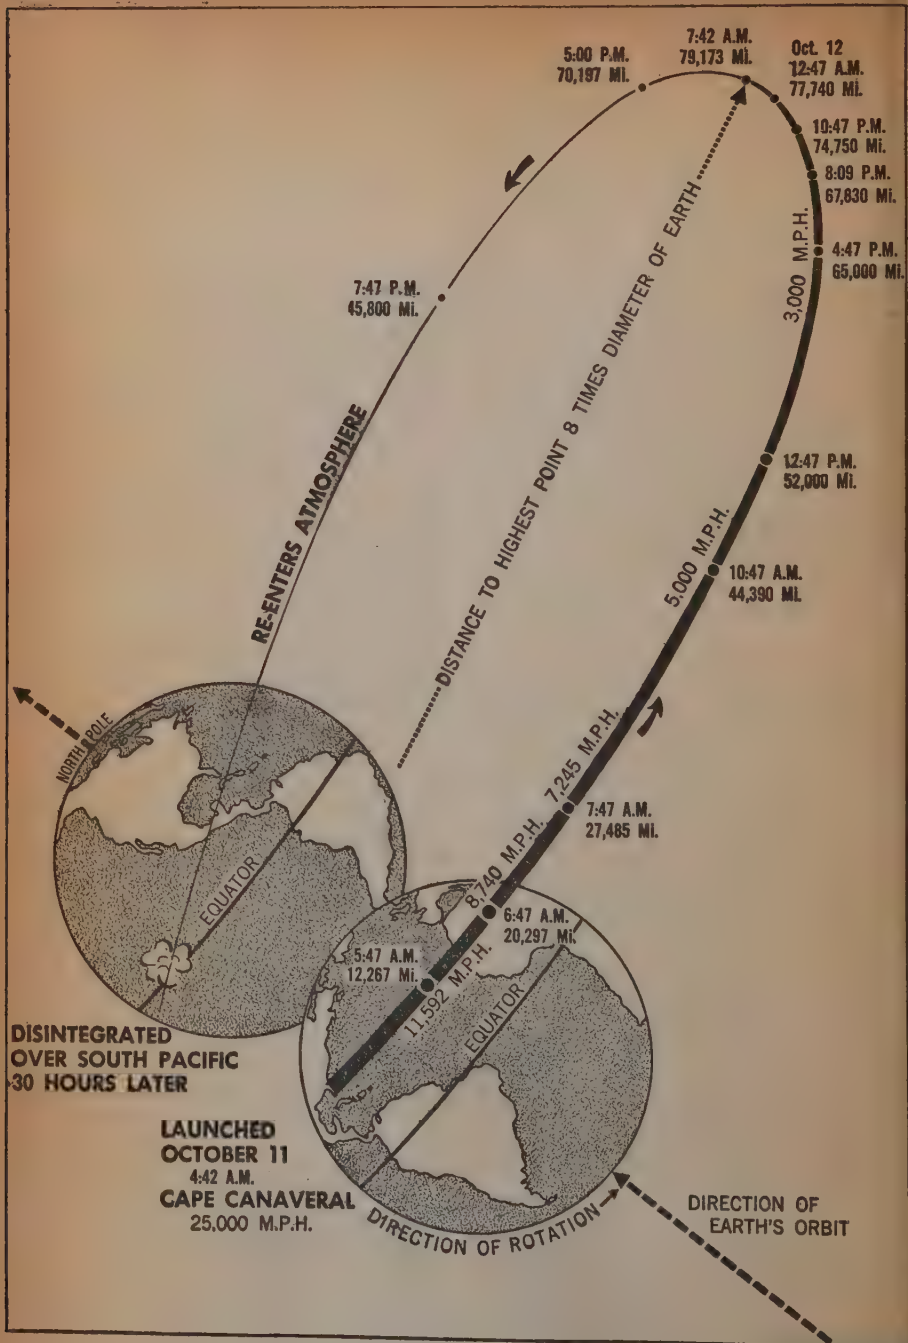

The path of such a probe becomes especially interesting if it is fired at specific times of the day. Our earth goes around the sun with a mean orbital velocity of 18.5 miles per second, at a mean distance of 93 million miles. This distance is known as an Astronomical Unit, or A. U.

Aphelion and Perihelion

During the movement of the earth around the sun its "forward" side is the area which experiences dawn at the moment, while the area which has dusk is the trailing side of the earth. Now if such a probe were fired "ahead" of the earth from a point which has dawn the probe would add its own velocity of 7 miles per second to the earth's orbital velocity. This means that it would be "too fast" to be held by the sun at the distance of the earth. It would recede from the sun and drift, along an elliptical orbit, "outward" in the solar system. It would reach its farthest point from the sun, called its "aphelion," at a distance of 1.3 A. U. or about 121 million miles. This aphelion would be reached 6½ months after take-off, at a point directly opposite from the position of the earth at take-off. After reaching aphelion the probe would start drifting inward in the solar system along the second half of its orbital ellipse. It would reach the point of its orbit closest to the sun, its "perihelion," 13 months after take-off. The perihelion of the probe is in the orbit of the earth; the earth, however passed that same point one month earlier since the probe needs 13 months to go around the sun and the earth needs only 12 months.

Still, the lifetime of this probe would not be unrestricted. Twelve years after take-off the probe would reach its perihelion at the same time as the earth occupies that point of its orbit. The probe would run into the earth and burn up in the atmosphere.

A rocket fired at dusk would behave somewhat similarly. It would subtract its velocity from the earth's orbital velocity and would be "too slow" to stay in the earth's orbit. It would drift inward in the solar system, reaching its perihelion at a distance of 0.8 A. U. from the sun (about 76¼ million miles) five months and one week after take-off. As in the case of the first probe, the point where the orbit reaches its extreme would be opposite the position of the earth at take-off. The probe would then drift outward in the solar system again and reach its aphelion 10½ months after take-off. Its aphelion is located in the earth's orbit, but the earth will not get to that point until six weeks later. Still, even that second probe will run

FLIGHT OF THE PIONEER (Times in Eastern Daylight Time)

into the earth finally, because seven years after take-off both the earth and the probe will meet.

Mars and Venus

Such small artificial satellites would, in themselves, be interesting experiments, but a little additional boost can accomplish a great deal more. Remember that the first probe, the one fired at dawn, reached its aphelion at a distance of 1.3 A. U. from the sun. The orbit of the planet Mars is, in the mean, 1.5 A. U. from the sun. In other words the probe fired at dawn would almost get there. With an additional boost it will get there, needing 260 days for the trip.

Likewise the probe fired at dusk reaches its perihelion at 0.8 A. U. The orbit of the planet Venus is at 0.7 A. U. Again the probe could reach Venus with a small additional boost. It has been made public that the U. S. Air Force has been authorized to fire two probes to Venus, presumably when it is ready to start the experiment. A great deal of preliminary study work has been done on planetary probes; now that the experiment has been authorized it will be necessary, first, to establish the maximum weight of the payload that can be carried and, second, to decide what should be carried within this permissible weight allowance. The reason for tackling Venus first is a simple one. We do know a good deal about the planet Mars but we know very little about the planet Venus because it is always hidden under multiple cloud layers.

Solar Probe

If a probe fired at dusk could acquire a velocity of $18\frac{1}{2}$ miles relative to the earth—i.e., the same as the orbital velocity of the earth—it would, as seen from the sun, stand still. This means that it would fall into the sun in a straight line. This possible variety of planetary probes is known as a solar probe and both American and Russian scientists have expressed great interest in solar probes.

To get an effective solar probe it is not necessary, of course, to make it actually stand still in the earth's orbit. If its velocity were, say, 10 miles relative to the earth, then its remaining velocity in the earth's orbit would be $8\frac{1}{2}$ miles per second. This would be slow enough for the sun to force it around the sun in a tight ellipse which would approach the sun more closely than any natural heavenly body. Though the aphelion of this probe, too, would be in the earth's orbit, it is highly likely that nothing workable would return, just fused instruments and partly molten metal (on the way back it would have solidified again). Readings, there-

fore, could probably only be taken while the probe is on its way toward the sun, until it comes so close that the sun's heat destroys the probe as far as its workability goes.

Planetary probes to both neighboring planets, as well as solar probes, are now within the reach of engineering. How many of them will be used during the second year of the Space Age will depend on factors and considerations other than engineering.

The "Balloon in Orbit Experiment"

The first attempt, made on October 22, to put a balloon into an orbit around the earth, failed because the top stage of the Jupiter-C rocket failed to ignite. But the balloon experiment certainly will be repeated quite often because it is expected to yield important scientific information and it can also be used for other purposes. The first thing such balloons are going to do is to measure air density at very high altitudes, from 150 miles on up.

The reason why a balloon can do this well lies in a factor known as "cross-sectional ballistic loading." The meaning of this term is this: if two bodies have the same shape (say spherical) the air resistance encountered by them is the same since air resistance depends on their cross section. Their momentum does not matter, all that counts is the cross section. But the momentum matters in another way. Physicists calculate momentum (or kinetic energy) according to the formula

$$\frac{M V^2}{2}$$

which means that you multiply the mass by the square of the velocity and divide the result by two. It is clear that two bodies of the same size and shape can have very different kinetic energy, depending on their weight. It is for this reason that a basketball can be thrown a considerable distance, but a toy balloon of the same size has no range worth mentioning. Obviously the lighter body is more hampered by air resistance. Hence a balloon in orbit will show traces of air resistance which a heavier body would not show.

Since a given rocket can carry a given weight into an orbit, a balloon, inflated in orbit, can be much larger and therefore more visible than an instrumented satellite carried by the same rocket.

If the balloon is made of non-elastic material it will still keep its shape even if tiny meteorites make holes in its skin. A punctured plastic balloon would be "empty" after a meteorite hit, but it would not collapse as a rubber balloon (the skin of which has been stretched) would.

FOLLOW THE MUSIC

with

"INFORMATION PLEASE" HOME CONCERTS

Selected and Edited by

IRVING KOLODIN

Music Editor, *Saturday Review*; Program Annotator, New York Philharmonic Orchestra

Introductory Note

If you enjoy listening to recorded music, our section on "Follow the Music" will add substantially to your pleasure. As the title suggests, it is an ingenious plan for you, the listener, to follow the composer's thinking as has never been possible before. And it does this without interfering, in the least, with the music as it is played.

"Follow the Music" and its novel scheme of correlating the important points of interest in such a work as Smetana's "Moldau" or Respighi's "Fountains of Rome" with a minute-by-minute timetable, is ideal for individual or group listening. A few trial runs will enable you, whether musically informed or not, to conduct a concert for family and friends in which you are, literally, the conductor.

"Follow the Music" puts the expert **BESIDE YOU**, by relating the high points of the composition to the exact minute and second when they occur.

By following the descriptive material with a timing device (stop watch or athletic timer is preferable, though a watch with second hand will do), you will know what instruments are being utilized for coloristic effects, what incidents of the story they illuminate, or what phase of a personality they reflect.

NOTE: *The time schedule applies SPECIFICALLY to the RCA Victor records indicated; other versions will be slower or faster, according to the individual preference of the conductor.*

Mode of Procedure:

Check your turntable for correct Long

Play speed (33 $\frac{1}{3}$ revolutions per minute). Most changer mechanisms are pre-set to this speed and will not require adjustment. If you have one that runs slightly faster or slower, this will soon show up, and you should make adjustments in utilizing the timetable.

If you are playing records manually, put the stylus well outside the lead-in groove, to allow yourself ample time to "catch" the first note. If you use the changer mechanism, listen for the "drop," and give yourself a "ready, set" count to "go" with the first note.

Set the timer mechanism at zero: with a little practice you will "click" it exactly at the first note, and thus be synchronized with Irving Kolodin's carefully timed schedule. If you miss, or start too soon, better do it again, for the enjoyment of the music will be spoiled if you are too far off. A few trial runs will provide all the skill required.

Suggested Procedure:

Listen to the composition as a whole, noting the occurrence of the different movements or sections as correlated with the time specified. This will provide a good check on turntable speed, and accustom you to the minute and second divisions. Then: watch for the smaller units of time, and pick up the effects as they occur. Listen to one selection, such as "The Moldau" a few times, to get the knack of starting and watching: it will also point up the difference between hearing music and listening to it, make **YOU** an active participant and greatly add to your enjoyment.

S M E T A N A

Toscanini—NBC Orchestra

The Moldau

The "Moldau" is the most popular of Smetana's works as well as one of a six-part cycle of tone poems titled "My Fatherland." An older countryman of Dvorak, Smetana did much to bring into being a distinctively Czech music in which the folk songs and dances of

his native land were utilized for the first time. Though he is well known for such lively works as "The Moldau" and his comic opera "The Bartered Bride," Smetana lost his hearing at the age of fifty and spent a decade of misery before his death in 1874.

<i>minutes</i>	NARRATIVE	<i>minutes</i>	INSTRUMENTATION
Beginning to 1:53	A description of the springs from which the river rises	Beginning: :58 1:25	Woodwinds, strings pizzicato Strings with main theme Second part of theme
1:53 to 2:45	It flows through the meadows	1:53	Strings again, with theme in major, and broader
2:45 to 3:35	Through the woods	2:45	Brass fanfares, with hunting calls
3:45 to 5:00	Past the fields, in which a peasant wedding is taking place.	3:45	Peasant dance strain in strings ("Polka" motive)
5:00 to 7:25	A quieter section, suggesting nightfall, and the legends associated with the river at night	5:00	Woodwinds and strings, followed by a flute solo
7:25 to 8:00	The music broadens out, as the river grows in size.	7:25	"Wave" motions of the woodwinds, as at the beginning
8:10 to 9:20	Agitated action, as it flows through the rapids of St. John	8:35	Percussion in background, cymbal crash as waters foam
9:40 to 9:50	It becomes a majestic flow as it approaches Prague.	9:40	"River" theme in full orchestra
9:50 to 10:55	It vanishes, far in the distance.	9:50 10:30	Great climax, with timpani rolls and cymbal crashes Dying away

RIMSKY-KORSAKOV

Fiedler—Boston Pops

Russian Easter

In its earliest form, the overture was a prelude to something on the stage, generally an opera, sometimes a spoken play. Gradually it became a form of expression in itself, usually on a dramatic or literary theme. Rimsky-Korsakov turned it to another usage, to describe

the pageantry and color of a "Russian Easter" service. In this brilliant narrative for orchestra, the instruments themselves become the "cast of characters," as they give dramatic excitement to the traditional chants utilized.

<i>minutes</i>	NARRATIVE	<i>minutes</i>	INSTRUMENTATION
Beginning to 3:45	Introductory section, depicting the interior of a Russian Orthodox Church at Easter time. This was known as the "Bright Holiday," because of the colorful music and dress associated with it.	Beginning:	Traditional chant "Let God Arise," in solo violin and clarinet
		:53	"An angel wailed" introduced by the 'cello.
		1:20	Elaboration in trombone muted trumpet, tuba, etc.
		2:45	Woodwinds
3:45 to 7:50	Main body of the overture, in which Rimsky musically depicts the service: the congregation, the reading of the sermon by the sexton, the chanting of the priests, the jubilation of the whole gathering.	3:45	"Let them that also hate Him flee before Him" (full strings)
		5:15	"Christ is Risen" (High strings, brass)
		5:50	Reading by the sexton (strings and trumpet)
		6:45	Chanting of the priests (trombone)
		7:50	Jubilation
7:50 to 12:55	A brilliant concluding section, in which all the themes are combined in a medley of effects	8:00	Full orchestra
		8:40	Climax, with cymbal
		9:10	"Christ is Risen" in brilliant setting
		9:45	Lyric theme, in strings
		10:05	Solo violin
		10:35	Brass fanfares
		11:45	Coda, full orchestra, with brass predominating

GERSHWIN

Gould—Orchestra

An American in Paris

George Gershwin accomplished many things in his relatively short life of thirty-nine years, but few more striking than his success in making a symphony orchestra talk American. He really accomplished his purpose in "An American in Paris," in which a fresh and re-

laxed atmosphere is established with the opening "walking theme," jaunty and assured, and sustained through the trumpet "in a hat" effects, the xylophone, bells, and snare drum writing, down to the final "blue" chord.

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 3:15	The American goes off on a walk. The weather is pleasant and there are many other walkers, male and female. Taxi horns honk in the background: a dance tune blares from a cafe, and he stops for a drink.	:26 1:30	First walking theme Taxi horns (repeated) The dance tune ("Maxixe"). He pauses for a moment.
		1:50 3:10	2nd walking theme French horns
3:15 to 4:25	The music takes a quieter trend, as the American thinks of home.	3:15	Strings, with English horn, then oboe
4:25 to 6:00	The walk resumes, in a brisker vein.	4:25 4:45	Transition 2nd walking theme, with xylophone, bells, etc.
6:05 to 7:10	He pauses to rest, and finds himself approached by a stranger. The music suggests she is feminine, and interested in him. His part of the dialogue suggests: "Some other time."	6:15 6:30 7:10 7:28	Solo violin, in a coquettish vein, suggests an amorous approach Answer in the flute The dialogue breaks off Jazz strain, in blue mood (trumpet with "felt hat" mute)
7:28 to 11:40	The nostalgia returns, and this time settles down, heavily.	8:00 10:40 11:00	The strings elaborate Cymbal crash at climax Blues still hang on
11:45 to 15:15	He meets a friend from home, and they break into happy conversation.	11:45 13:50	Jazz theme, in a happy mood, building up to <i>Grandiose</i> climax
15:15 to 17:10	The walk resumes, with the American joined by his friend, in a mood for adventure.	14:40 15:15 16:25 17:00	The tuba has a ribald comment. Walking themes, taxi horns, etc. Coda Ending, on a "blue" note, but not in a blue spirit . . .

PROKOFIEV

Reiner—Chicago Symphony

Lt. Kije

Serge Prokofiev had a strain of humor that asserted itself in his early musical works, some of them entitled "Sarcasms." While composing a number

of fine symphonies and concertos, he never lost it, as we know from the "Classical" symphony, "Peter and the Wolf" as well as "Kije."

<i>minutes</i>	NARRATIVE	<i>minutes</i>	INSTRUMENTATION
Beginning to 4:05	Prokofiev's "Lt. Kije" deals with a man who was, actually, a typographical error. In scanning a list of army personnel, the Czar's eye was attracted by what he took to be a name, but was really the equivalent of "etc." In order to avoid embarrassing him, Lt. "Etc" was provided with a life history, romance, even burial.	Beginning:	Trumpet fanfare, announcing Kije's birth
		:25	Snare drum, piccolo, flute pronounce march associated with Kije.
		1:15	Buildup in full orchestra
		2:05	Brass fanfares
		3:30	Reprise of opening trumpet call
4:20 to 8:30	<i>Romance</i> The "hero" is shown in his romantic character courting and wedding a sweetheart.	4:20	Lullaby theme
		5:15	Celesta and saxophone develop the mood.
		6:10	More stately version
		6:30	Strings, bassoon
8:30 to 11:20	<i>Wedding</i> The wedding is arranged, guests invited, etc. The ceremony is followed by dancing and rejoicing.	8:30	Brass announce the ceremony to come
		8:55	Dance theme in the trumpet
		10:00	Brass again
		10:35	Combination of themes
11:20 to 13:50	<i>Troika</i> A troika carries the wedding party to a tavern, where there is dancing and drinking, and lively songs.	11:20	Introduction, brass strings
		11:45	Troika theme (string brass)
		12:30	Bassoon, for comic effect
		13:25	Troika, with piccolo added
14:00 to 19:55	<i>Death and Burial</i> As accords his rank, Kije is given a military funeral, and mourned by his cohorts, though in a musical setting that suggests some comic overtones.	14:00	Trumpet call, as at beginning
		14:30	"Funereal" music
		15:05	Prior themes transformed in strings and woodwinds
		15:25	Wedding music
		18:15	Mock dirge
		19:25	Fanfare, as at beginning

GEORGES ENESCO

Stokowski—Orchestra

Roumanian Rhapsody No. 1

In his long active life, Georges Enesco easily established himself as Rumania's most eminent musician. Enesco wrote a good deal of music in many elaborate

forms: operas, symphonies, etc.: but he is most widely known for the two "Roumanian Rhapsodies" of his early years.

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 1:30	Introduction In this lively work of 1907, Enesco made brilliant use of the scheme devised by Liszt for his "Hungarian Rhapsodies" of the 1850's.	Beginning: :40 :55	Clarinet plays first phrase of folk song: "I have a coin and I want a drink." Oboe joins Strings Elaboration to
1:30 to 3:05	First Theme in Full	1:30 2:10	Strings, with full orchestra Divided strings and winds
3:05 to 3:15	"Sirba" (Theme II)	3:05	Woodwinds and strings
3:15 to 4:40	Return to Theme I	3:15 3:35 4:00	Solo viola, bassoon Full strings Development
4:40 to 5:05	Theme III (Minor)	4:40	Strings
5:05 to 6:10	Fantasy	5:20	Theme III (Minor)
6:10 to 7:05	"Hora" dance theme	6:10 6:25	"Hora" introduced by solo flute Picked up by various woodwinds
7:05	First climax (Theme II)	7:05	Strings, cymbal
7:40 to 8:50	"Hora" developed	7:40 8:00 8:20 8:50	Strings, woodwinds, etc. (in turn) Percussion added Original effect, produced by glissando in violins Woodwinds, brass
8:50	Previous themes reprised	10:05	Glissando effect, with horns in background
10:30 to 10:55	Slow interlude	10:30	Woodwinds
10:55 to 11:15	Coda	11:00	Harmonics, glissando, etc.

TCHAIKOVSKY
Toscanini—NBC Orchestra
Romeo and Juliet

Of the many treatments of "Romeo and Juliet" in music—Berlioz, Gounod, Prokofiev among others—Tchaikovsky's is the most direct and vivid. His broadly passionate themes may not be pure

Shakespeare but they express a warm view of the primary elements—love and hate, devotion and deception—which have caused the story to endure.

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 5:10	Introduction (Andante) For purposes of his musical story, Tchaikovsky selected four key elements of Shakespeare's play and provided them with an easily recognizable musical parallel.	Beginning:	Friar Laurence music, in clarinets and bassoons
		1:00	Juliet's music in flutes and clarinets over strings.
		2:00	Friar Laurence
		3:00	Juliet
		4:25	Timpani, as bridge to next section
5:12 to 10:05	Overture (Allegro giusto) A powerful outburst to suggest the strife of the Montagues and Capulets launches the main body of the overture. In contrast to it is the familiar singing melody (popularized in the words "Our love") which characterizes Romeo's love for Juliet.	5:12	Full orchestra, with horns and trumpets dominating
		6:15	More intense "strife"
		7:00	It quiets down
		7:15	Romeo theme, in English horn
		7:35	Second part, in strings
		8:15	Flute joins horns
		10:05	Climax
10:15 to 15:35	Fantasia As Tchaikovsky called his work an "Overture-Fantasia after Shakespeare," he was not restricted in choosing a combination or succession of ideas.	10:15	Strife motive
		11:15	Trumpets prepare a climax
		12:30	Juliet's bedchamber recalled
		13:05	Romeo's love theme
		15:25	Strife again
		15:30	Friar Laurence is recalled
		15:35	Timpani outburst, suggesting tragedy of poison
15:35 to 18:02	Conclusion (Moderato) A résumé and summary of the preceding events, heavily colored by the theme of Friar Laurence and the two love motives.	15:50	Strings, in a minor transformation of Romeo theme
		16:25	Juliet's music
		17:15	The two together, suggesting their reunion in death
		17:45	Timpani, in a harsh reminder of strife

RICHARD STRAUSS

Reiner—Vienna Philharmonic

Till Eulenspiegel

A world celebrity at twenty-five, Richard Strauss lived to see the works denounced as "scandalous" by some moral-minded critics become staples of the concert repertory. In a way, his per-

sonality found a predestined outlet in the tale of "Till Eulenspiegel," for his mocking writing upset some staid minds as much as the fictitious rogue did the bodies of those who made him famous.

<i>minutes</i>	NARRATIVE	<i>minutes</i>	INSTRUMENTATION
Beginning to 1:35	<i>Introduction</i> Till Eulenspiegel is a legendary figure in German (also Dutch) folklore whose pranks ranged from the malicious to the scandalous.	Beginning: :15 1:05	Strings proclaim a "Once upon a time" atmosphere, First theme (horn) Second theme (clarinet)
1:40 to 3:40	<i>1st Adventure</i> Till invades a town, on market day. He causes a horse to run away, spreading confusion.	1:40 2:50 3:20	First theme, worked up. The noisy instrument is a ratchet (slat on wooden wheel). Mocking transformation
3:40 to 5:00	<i>2nd Adventure</i> Disguised as a priest, Till goes about in an unctuous manner. But the rogue in him peeps out.	3:40	Churchly woodwinds and brass predominate, but the clarinet reminds us of Till's presence.
5:02 to 6:20	<i>3rd Adventure</i> Till in a romantic mood, is captivated by a pretty face.	5:02 6:00	The strings show him in loving light. Rejected, he is angry
6:25 to 7:40	<i>4th Adventure</i> A group of Philistines approach. Forgetting his rage Till makes fun of them.	6:25 7:25 8:20	Sober strings and woodwinds The joke at its funniest The oboe warns he will come to no good end.
8:55 to 11:20	A free development of previous themes	8:55 11:00	Horn as at the beginning: Approaching climax
11:20 to 13:20	Till before the judge. He must face judgment. He sneers at it. The death sentence is passed.	11:20 12:15 12:50 13:00	Ruffle of drums Clarinet, more so "Death" (trombone) . . . A final squeal (clarinet).
13:25 to 14:40	<i>Epilogue</i> Not such a bad scamp after all.	13:30 14:40	"Once upon a time" (strings) "He will be remembered"

BEETHOVEN
Munch—Boston Symphony
Coriolan Overture

Beethoven made so many innovations in music that it is but a footnote to his historic career that he virtually invented the concert overture—that is, a brief

work of dramatic character *not* designed to be played before a stage presentation, but illustrating the main elements of a plot.

<i>minutes</i>	NARRATIVE	<i>minutes</i>	INSTRUMENTATION
Beginning to :15	Introduction Gaius Marcius Coriolanus defied the Roman tribunes of his time (400 B.C.) and was exiled. He organized an army and returned with the intention of destroying the city.	Beginning:	The heavy chords of the full orchestra (strings pre- dominating) provide a cur- tain rise on the drama to come. They also return at several later points.
:15 to 2:00	Exposition The military or political power to resist Coriolanus (Coriolan is the German form) are unavailing, but pressure is finally put upon him by his mother, wife and son, who are sent out from Rome to plead with him. He finally gives in and the city is saved.	:15 1:02 1:30	A compact but forceful theme typical of Beetho- ven's ability to pack a great deal of meaning into a few notes is worked up to cli- max (mostly strings) Strings, with oboe outlining a melody with a pleading character, expressive of the pressures upon him. They are angrily rejected (chords of the opening)
2:00 to 5:20	Development The drama is artfully devel- oped by Beethoven in the alteration and elaboration of the thematic material tradi- tionally termed the "devel- opment section." Thus he makes the form and the con- tent a close entity.	2:00 2:55 3:25 4:00 4:40	Resistance continues Opening chords find him still unmoved. The pleading theme, in the strings, with more urgency More conflict Another appeal, plaintive in the minor
5:20 to 6:00	Recapitulation and Coda	5:20 5:40	Opening chords, not so reso- lute His wavering is heard in the crumbling of his theme. It dies away, suggesting his own death in disgrace.

DUKE ELLINGTON

Ellington—Orchestra

Profiles: Portrait of Bert Williams

Duke Ellington's creations include many pieces for his band and the distinctive musicians it has included over a thirty-year period. One of the outstanding masters it has developed was Charles "Cootie" Williams, who made a specialty of making the trumpet talk

by means of mutes. As he uses each, the narrative grows more excited, as he is answered by other members of the band, especially Barney Bigard, on clarinet, and Trombonist Nanton (who, because of his own skill with mutes was known as "Tricky Sam.")

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 1:15	<i>First Chorus</i> Bert Williams was one of the first Negro entertainers to make a Broadway success and to star in such a revue as Ziegfeld's "Follies." He was a master of pantomime, particularly in depicting the action of a poker game. In a composite portrait, Ellington shows the many sides of Williams, who also sang a famous song "Nobody."	Beginning:	Baritone saxophone introduction
		:15	Muted trumpet, in derby hat
		:55	Clarinet
1:15 to 1:30	<i>Variation</i>	1:15	Full band
1:30 to 2:20	<i>Second Chorus</i> An allusion, perhaps, to the dialogue in which his partner (Walker) tried to persuade him to take part in a bank robbery. After explaining his fears of getting caught and going to jail, Williams delivered the classic punch line: "And everybody knows you can't smell no flowers through a stone wall."	1:30	Muted trumpet ("Preaching")
2:25 to 3:10	<i>Final Variation</i>	2:25	Muted trumpet, with cup mute
		2:40	Answered by trombone
		2:50	Trumpet with plunger mute

RESPIGHI

Toscanini—NBC Orchestra

Fountains of Rome

A Roman by birth, Ottorino Respighi mirrored, musically, many aspects of his beloved city, in "Pines of Rome" and "Roman Festivals" as well as "Fountains of Rome." A pupil of Rimsky-Korsakov, Respighi developed an unsurpassed

command of orchestral effects which he used for color effects as vivid as any master painter's. An appreciation of this skill enables the listener to "see," with his ears, what was in Respighi's mind from start to finish.

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 3:45 (Dawn)	<i>Fountain of Villa Giulia</i> The first of the four fountains depicted by Respighi is on the outskirts of Rome. Dawn is breaking, and a herd of cattle is driven by.	Beginning:	Strings and woodwinds in a pastoral mood
		1:20	Piccolo and flute, also harp
		2:00	Cellos, plus oboe
		2:15	Celesta, suggesting cow bells
3:45 to 6:25 (Morning)	<i>Fountain of Triton</i> This fountain is surmounted by statuary depicting Triton, son of Neptune. He is blowing on a sea shell. Respighi suggests this in blasts on the French horn, leading to dance music in which an imaginary group of Naiads romp.	3:45	French horn blast, repeated four times
		5:00	Dance of the Naiads
		6:05	Cymbal crash, as dance reaches its climax
6:25 to 9:30 (Midday)	<i>Fountain of Trevi</i> A great figure of Neptune in a chariot drawn by a sea horse dominates this fountain. From this design Respighi derived the concept of a magnificent procession of Neptune's court.	6:30	English horn, followed by brass and strings
		6:50	Percussion joins in
		7:35	Full orchestra, as procession passes
		8:15	It begins to recede
9:35 to 14:45 (Evening)	<i>Fountain of the Villa Medici</i> The character of this music is related not only to time but to place, for the fountain is a great saucer shaped bowl, with the overflow dripping into the pool beneath.	9:35	Harp, bells and celesta, joined by flute, English horn and French horn
		10:25	High strings, also celesta
		12:30	Closing section begins, with birds and bell sounds
		13:10	Distant chimes
		14:00	Vespers, in cellos

PAUL DUKAS

Toscanini—NBC Orchestra

Sorcerer's Apprentice

During his long career (he died in 1935) Paul Dukas wrote nothing more strikingly conceived than this scherzo

of 1897, when he was thirty-two. It has had a host of imitators, but nothing to equal its wit, color, and charm.

minutes	NARRATIVE	minutes	INSTRUMENTATION
Beginning to 2:10	<i>Introduction</i> The story of an apprentice who steals his master's password to create a magic spell but lacks the one to avert disaster was borrowed by Goethe from an old folk legend. In his Scherzo, Paul Dukas has paralleled very closely the high points of the story.	Beginning:	Mysterious atmosphere in the strings, this music hereafter associated with the sorcerer
		:14	Clarinet, broom theme
		1:15	Brief anticipation of the scherzo
		1:50	Theme in brass, suggesting cries for help
2:15 to 9:05	<i>Scherzo</i> From a rather quiet beginning, as the broom goes about bringing in pails of water, the music of the scherzo rises to a pitch of excitement: recedes as the sorcerer's apprentice breaks the broom in half and only succeeds in doubling its water-carrying power, and rises to an even higher peak of excitement. Dukas utilizes the division of the story cleverly to arrest the first part of the scherzo.	2:15	Bassoon, with broom theme
		3:05	A more active form in the brass (muted)
		3:50	Triangle, etc., in percussion background
		4:10	More themes brought in
		5:10	A climax builds
		5:40	First signs of panic
		5:55	Cries for help
		6:30	The broom is broken in two (Bassoon and clarinet pick up tempo)
		7:45	New cries for help
		7:50	Water is everywhere
		8:40	Climax approaches
		9:00	The sorcerer takes over
9:10 to 10:05	<i>Epilogue</i> As peace settles down on the scene again, the atmosphere of the beginning returns.	9:20	Strings, as at the beginning
		10:00	Final outburst in full orchestra—"Begone," raps the sorcerer.

CARL M. VON WEBER*

Toscanini—NBC Orchestra

Invitation to the Dance

Weber's life was ended by consumption when he was only 39 (1826) but he contributed much of importance to music: such operas as "Der Freischuetz," "Oberon" and "Euryanthe," each with a famous overture, much brilliant piano music, many ways of doing things that

were carried out by Chopin, Schumann, and Mendelssohn. Among his greatest admirers was the French composer Hector Berlioz, who made his fine arrangement of "Invitation to the Dance" for a Paris production of "Der Freischuetz," which it has long outlived.

minutes NARRATIVE

Beginning *Introduction*
to 1:20 Originally composed for piano, Weber's "Invitation to the Dance" has become one of the most popular works in the orchestral literature as the result of its arrangement by Berlioz. It also has a separate fame as the background for Fokine's famous ballet "Spectre de la Rose."

minutes INSTRUMENTATION

Beginning: 'Cello Introduction (male guest extending an invitation)
:09 Woodwind response (the lady is interested)
:20 Further inquiry by 'cello
:35 The clarinet joins the conversation
1:00 It grows more animated, as they take to the dance floor

1:23 to *Waltzes*
7:15 Weber provided the example for all later composers who grouped a series of waltzes into a sequence, including Chopin, Strauss, Waldteufel, etc. A composition of 1819, it was the first concert-waltz ever composed, and still one of the best.

1:23 Pickup by full orchestra
1:23 First waltz, begun by strings
1:55 Woodwinds, pizzicato strings
2:12 Full orchestra
2:35 Introduction reprised
2:45 Second waltz: strings, with horn punctuation
3:35 Elaborated
3:50 Oboe prominent
4:10 More elaboration
4:35 Brass, for contrast
6:00 More brilliant orchestration
7:00 Coda, leading to

7:15 *Postlude*

7:15 'Cello "speaks" to clarinet, as at the beginning, thanking her for the dance as she returns to her place.

MAJOR U. S. POST-WAR POLICY DECISIONS

The Marshall Plan

After World War II, recovery programs among the nations of Europe, as well as contributions from the United States, were unco-ordinated. In June, 1947, Gen. George C. Marshall, then Secretary of State, asserted the need for integrated recovery efforts against "hunger, poverty, desperation, and chaos." Congress, in April, 1948, appropriated \$5.4 billions. The United States established the Economic Co-operation Administration while European nations set up the Organization for European Economic Administration. Under a system of counterpart funds, each participating government set aside in its own currency amounts matching the aid it received. As the European Recovery Program, Marshall Plan aid was economic in its early stages but with the worsening international situation—particularly after Korea—emphasis was shifted to rearmament. When ERP ended in Dec., 1951, a year ahead of schedule, it had cost \$11 billion but substantial amounts had been committed to collateral military ventures.

Truman Doctrine

President Truman took a decisive step in March, 1947, when he obtained from Congress authorization to spend \$400 million to aid Greece and Turkey. His move followed directly on withdrawal of aid to those countries by Great Britain, whose

resources were dwindling. Greece suffered from Communist guerrilla infiltration; Turkey lived under threat of Russia's constant pressures. Besides the appropriation, Congress authorized shipment of military equipment and dispatch of a military and technical mission. By 1950, the Red guerrillas had given up the struggle and in Turkey results were much more immediately successful. The Truman Doctrine is regarded as the first significant experiment in the policy of "containment," although it preceded by four months the intellectual presentation of this policy by George Kennan.

Eisenhower Doctrine

In January, 1957, President Eisenhower, noting the unsettled state of the Middle East, asked authority from Congress to co-operate with any nation in that area for economic development, to undertake programs of military assistance for such nations which desired it and to use U. S. armed forces to protect Mid-East countries "requesting such aid" against "overt armed aggression from any nation controlled by international communism." In March, Congress authorized expenditures up to \$200 million for 1957. Anti-Communist declarations were immediately forthcoming from Lebanon and Libya and more important, King Hussein of Jordan took a strong stand against the leftist drift in his country. Arms also were shipped to the area to counter the build-up of Soviet military equipment in Syria.

U. S. POST-WAR TREATIES

North Atlantic Treaty Organization (NATO)

(Formed: April 4, 1949)

Members: United States, Canada, Iceland, Norway, Great Britain, Netherlands, Denmark, Belgium, Luxemburg, Portugal, France, Italy, Greece, Turkey, West Germany

In 1948, the United States government began talks with the signers of the Brussels Pact and Canada concerning the formation of a regional defense treaty in the North Atlantic area. It represented the first important security pact with European nations since the French Alliance of 1778 and marked the first time in United States history that the United States pledged itself to go to war in support of allies before the

actual outbreak of hostilities. The U. S. Senate ratified the treaty July 21, 1949.

The United States, acting under Article 3 of the Treaty, began a program of military assistance which at the end of the fiscal year 1957 amounted to nearly \$10 billion. Roughly half of all United States military assistance has gone to members of NATO. However, approximately 85% of NATO's military preparation has come from the European countries themselves, increasing from about \$6 billion in 1949 to \$12 billion in 1955. The United States has nevertheless assumed almost one-third of the cost of equipment and the facilities of mutual military bases.

NATO now united most of the countries of the Atlantic community plus Greece, Turkey, and West Germany, which were added to the original membership. Its organization comprises the top foreign, economic, defense, and financial ministers

of the member countries. The military responsibilities of NATO are divided into two major commands—SHAPE for Europe and SACLANT for the Atlantic Ocean area. SHAPE at present has 47½ divisions. SACLANT relies on naval strength to control the sea lands of the North Atlantic.

Western European Integration

Members: France, Italy, West Germany, Belgium, Netherlands, Luxembourg

A gradual process, the first step of which came in 1944 when Belgium, the Netherlands, and Luxembourg formed the Benelux Customs Union. Next, sixteen Western European nations created in 1948 the Organization for European Economic Co-operation (OEEC), to reduce import limitations and advance convertibility of currencies through the European Payments Union. Then followed establishment of the European Coal and Steel Community (1952), by which France, Italy, and West Germany erected a supranational organization, which has set up a common market in coal and steel. These successes led to creation by the same six nations, in March, 1957, of Euromarket, to stimulate trade by eliminating customs barriers, creating common tariffs, cutting exchange restrictions, etc., and of Eurotom, an atomic energy pool.

Southeast Asia Treaty Organization (SEATO)

(Signed: Sept., 1954)

Members: United States, Great Britain, France, Australia, New Zealand, Pakistan, Thailand, Philippines

Weaker than NATO, SEATO does not include rigid provisions for collective defense but states that armed attack on any member would be regarded as a threat to safety of the others. SEATO represents the United States' desire to counterbalance the power of Communist China. Yet three major non-Communist members—Indonesia, Burma, and India—are not members.

Anzus Treaty

(Effective 1952)

Members: Australia, New Zealand, United States

This security treaty involves a commitment less comprehensive than that of NATO and closer to the SEATO obligations.

Article 3 stipulates that the parties will consult whenever in the opinion of any of them the territorial integrity, political independence, or security of any of the parties is threatened in the Pacific. Under Article 4, each party recognizes that an armed attack in the Pacific area on any of the parties would be considered dangerous to its own peace and safety, and agrees to act to meet the common danger in accordance with its constitutional processes.

Baghdad Pact or Middle East Treaty Organization (METO)

(Signed: Nov., 1955)

Members: Turkey, Iraq, Iran, Great Britain, Pakistan

Although it inspired the pact, the United States is not a member. The pact's purpose is to provide a defense shield on the northern tier of the Middle East against Soviet penetration.

Organization of American States (OAS) and the Rio Treaty

In Sept., 1947, eighteen Latin American countries (Nicaragua and Ecuador were excluded) and the United States signed at Rio de Janeiro the Rio Treaty under which all signatories agreed to protect against aggression every state in the Western Hemisphere. In Apr., 1948, all the American nations (twenty-one—Canada not included) joined in the Organization of American States (OAS) to implement the Rio Treaty and form a collective security system.

Reds' NATO—Warsaw Pact

(Signed: May 14, 1955)

Members: Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, U.S.S.R.

The Warsaw Pact was prompted by the admission of Western Germany to NATO and may be considered as the Communist equivalent in Eastern Europe to NATO in Western Europe. Article 4 of the agreement contains the same provisions as Article 1 of NATO, stating that an attack on one shall be regarded as an attack on all. Article 5 provides for a unified military command.

(See Headline History listing events of 1917-57, pages 67-71. For summaries of other Conferences and Treaties, see pages 252-56.)

HEADLINE HISTORY OF OUR TIMES

Based on Newspaper Accounts of Important Events

The Headline History is based on the date when historical events came to the knowledge of the public through the newspapers. The events themselves may have occurred at a different date. For events previous to Headline History, see Page 817, for Historical and News Events from Ancient to Modern Times. This is compiled by the Encyclopaedia Britannica staff, and it begins with the Battle of Actium in 31 B.C. It includes a chronology of World War I.

See also Post-War Treaties and Decisions, pages 65-66, and Conferences and Treaties, pages 252-256.

- 1917**
Mar. 8—Russian Revolution begins.
Apr. 6—U. S. enters World War I.
- 1918**
Jan. 8—Wilson's 14-point address to Congress calls for self-determination, removal of economic barriers, League of Nations.
July 16—Tsar Nicholas II and family shot.
Nov. 11—World War I ends.
- 1919**
June 28—Versailles Treaty signed.
- 1920**
Jan. 10—League of Nations officially inaugurated as Versailles Treaty goes into effect.
Jan. 16—Prohibition in U. S. goes into effect.
Mar. 19—Senate finally rejects Treaty of Versailles because of League of Nations proviso.
- 1922**
Oct. 27—Mussolini marches on Rome.
- 1923**
Nov. 8-9—Munich beer hall putsch led by Hitler put down; Hitler sentenced to 5 years, serves less than 1; writes *Mein Kampf* in jail.
- 1925**
July 10-21—Scopes evolution trial held in Dayton, Tenn.
- 1927**
May 20-21—Lindbergh flies solo across Atlantic.
Aug. 23—Sacco and Vanzetti executed.
Nov.—Trotsky expelled from Communist party.
- 1929**
Oct. 24—Worst stock crash wipes out thousands of accounts.
- 1931**
Sept. 18-19—Explosion on Manchurian railway serves as pretext for Japan to begin occupation of Manchuria.
- 1932**
Jan. 7—Stimson Doctrine: U. S. will not recognize gains achieved by armed force; recognition of Manchukuo withheld.
Jan. 28—Japan begins invasion of international settlement of Shanghai.
June 7—Bonus March on Washington, D. C.
- 1933**
Jan. 30—Hitler made Chancellor of Germany by Hindenburg.
Mar. 5—Reichstag elections give Nazis and Nationalist allies 52% of vote.
Mar. 6—Roosevelt proclaims bank holiday; embargoes gold.
Mar. 12—FDR's first "Fireside Chat."
Mar. 23—Reichstag gives Hitler blanket powers for 4 years; 94 Social Democrats opposed; many Social Democrats and all Communists under arrest or in hiding.
Mar. 28—Nazis begin systematic boycott of Jewish businessmen, doctors, lawyers.
May 18—Tennessee Valley Authority (TVA) established.
June 16—National Industrial Recovery Act (NIRA) signed. Declared unconstitutional May 27, 1935.
Dec. 5—Prohibition ends in U. S.
- 1935**
Mar. 16—Hitler defies Versailles Treaty by re-establishing universal military training in Germany.
Aug. 14—Social Security Act signed; establishes old-age benefits and unemployment insurance. Upheld by Supreme Court May 24, 1937.

Aug. 20—3rd International decides Russia will side with democracies against Fascist states.

Sept. 15—Nuremberg laws deprive Jews of citizenship and bar intermarriage.

Oct. 3—Italy invades Ethiopia.

Oct. 7—League of Nations condemns Italy.

1936

Jan. 20—George V dies; Prince of Wales becomes Edward VIII.

Mar. 7—Hitler sends German troops into Rhineland, defying Versailles Treaty; denounces Locarno Pact.

July 17—Spanish civil war begins; troops led by Gen. Francisco Franco revolt in Spanish Morocco; uprisings follow all over Spain.

Aug. 19-23—Zinoviev and Kamenev executed in Russia as collaborators with Trotsky and Nazi secret police.

Oct. 1—Franco named Chief of State by rebels; establishes capital at Burgos.

Oct. 27—Rome-Berlin Axis formed.

Nov. 18—Italy and Germany recognize Franco regime in Spain.

Nov. 25—Japan signs anti-Comintern treaty with Germany; Italy adheres Nov. 6, 1937.

Dec. 1-23—Buenos Aires conference: 21 American republics pledge to consult if peace is imperiled; no nation to interfere with another's domestic affairs.

Dec. 11—Edward VIII abdicates; his brother becomes George VI.

1937

June 12—Marshal Tukhachevsky and 7 generals executed in Russia for espionage and high treason.

1938

Sept. 29-30—Britain, France, Italy, Germany in parley at Munich agree to dismemberment of Czechoslovakia; Chamberlain returns to London with "peace in our time."

1939

Mar. 15—Hitler enters Prague.

Apr. 28—Hitler rebuffs FDR's peace plea in Polish quarrel.

Aug. 24—Germany and Russia sign 10-year nonaggression pact.

Sept. 1—Germany invades Poland and annexes Danzig; Britain and France give Hitler ultimatum.

Sept. 3—Britain and France declare war.

Sept. 28—Poland partitioned by Germany and Russia.

1940

May 10—Nazis invade Netherlands, Belgium, Luxemburg.

May 10—Chamberlain resigns as Prime Minister; Churchill takes over.

May 12—Germans cross French frontier.

May 26-June 3—Dunkerque evacuation: about 385,000 out of 400,000 Allied soldiers rescued from Belgium; 1 civilian and naval craft from Britain.

June 10—Italy declares war on France and Britain; invades France.

June 14—Germans enter Paris; city undefended.

June 22—France and Germany sign armistice at Compiègne.

Nov. 14—Nazis bomb Coventry.

1941

Apr. 17—Yugoslavia surrenders; Gen. Mikhailović continues guerrilla warfare; Tito leads left-wing guerrillas.

Apr. 27—Nazi tanks enter Athens; remnants of British army quit Greece.

June 22—Hitler attacks Russia.

Aug. 14—Atlantic Charter: FDR and Churchill agree on war aims.

Dec. 7—Japan attacks Pearl Harbor, Philippines, Guam, forcing U. S. into war Dec. 8; Pacific Fleet crippled.

Dec. 8—U. S. and Britain declare war on Japan.

Dec. 11—Germany and Italy declare war on U. S.; Congress declares war on those countries.

1942

Feb. 15—British surrender Singapore.

Apr. 9—U. S. forces on Bataan surrender.

Nov. 8—U. S. and Britain land German army in French North Africa.

1943

Jan. 14-24—Casablanca Conference: Churchill and FDR agree on unconditional-surrender goal.

Feb. 1-2—German 6th Army surrenders at Stalingrad; turning point of war in Russia.

May 12—Remnants of Nazis trapped at Cape Bon, ending war in Africa.

June 10—FDR signs withholding tax.

July 25—Mussolini deposed; Badoglio is Premier.

Sept. 3—Allied troops land on Italian mainland.

Sept. 8—Italy surrenders.

Sept. 10—Nazis seize Rome.

Nov. 22-26—Cairo Conference: FDR, Churchill, Chiang-Kai-shek pledge defeat of Japan, free Korea.

Nov. 28-Dec. 1—Teheran Conference: FDR, Churchill, Stalin agree on invasion plans.

1944

- July 20—Hitler wounded in bomb plot.
- Aug. 25—Paris liberated.
- Oct. 20—American troops invade Philippines.
- Dec. 16—Germans launch counteroffensive in Belgium (Battle of Bulge).

1945

- Feb. 11—Yalta Agreement signed by FDR, Churchill and Stalin.
- Apr. 12—FDR dies; Truman is President.
- May 1—Grand Adm. Karl Doenitz takes command in Germany; death of Hitler announced.
- May 2—Berlin falls.
- May 7—Germany surrenders unconditionally (V-E Day).
- July 17-Aug. 2—Potsdam Conference: Truman, Churchill (Attlee after July 28), Stalin establish council of foreign ministers to prepare peace treaties; plan German postwar government and reparations.
- Aug. 6—A-bomb blasts Hiroshima.
- Aug. 8—Russia declares war on Japan.
- Aug. 9—Nagasaki hit by A-bomb.
- Aug. 14—Japan surrenders.
- Sept. 2—Japanese sign surrender terms aboard battleship *Missouri* (V-J Day).
- Oct. 24—U. N. officially established.
- Nov. 15—Truman, Attlee and Mackenzie King decide in Washington Conference that A-bomb secrets will not be shared until U. N. adopts control plan.
- Dec. 27—Moscow Conference, attended by Byrnes, Molotov and Bevin, makes preliminary plans for atomic-energy control, peace treaties and Korea.

1946

- Jan. 10—1st meeting of U. N. General Assembly opens in London.
- Apr. 8-18—Final Assembly session at Geneva dissolves League of Nations.
- Apr. 29—U. S. proposes treaty with Britain, Russia and France to keep Germany disarmed 25 years; Russia cool to idea.
- May 31—U. S. and Britain demand free elections in Rumania.
- Oct. 1—Verdict in Nuremberg war trial: 12 Nazi leaders (including 1 tried in absentia) sentenced to hang; 7 imprisoned; 3 acquitted.
- Oct. 15—Goering commits suicide a few hours before 10 other Nazis are executed Oct. 16.

1947

- Jan. 28—U. S. rebukes Polish Communists for rigging election.
- Feb. 10—Peace treaties for Italy, Rumania, Bulgaria, Hungary, Finland signed in Paris.

- Mar. 4—Russia rejects U. S. plan for U. N. atomic-energy control.
- Mar. 12—Truman asks Congress for \$400 million to save Greece and Turkey from Communist expansion (Truman Doctrine).
- July 12-15—16 nations meet in Paris to study Marshall Plan (Russia and 8 others stay away).
- Aug. 1—Security Council calls on Dutch and Indonesians to cease hostilities.
- Aug. 15—India freed by Britain.
- Oct. 5—Moscow announces formation of new 9-nation Communist Information Bureau (Cominform).
- Nov. 14—General Assembly votes commission to set up free government for all of Korea.

1948

- Jan. 17—U. N. Good Offices Commission effects truce in Indonesia.
- Jan. 30—Gandhi assassinated.
- Feb. 23-25—Communists seize power in Czechoslovakia.
- Apr. 21—Security Council votes plebiscite in Kashmir to decide whether province goes to India or Pakistan; both sides object.
- May 14—Nation of Israel proclaimed; British end mandate at midnight; Arab armies attack.
- June 11—U. N. appeal brings temporary truce in Palestine.
- June 18—Russia stops traffic between Berlin and Western occupation zones in Germany.
- June 21—Berlin airlift begins; ends May 12, 1949.
- June 22—Russian veto prevents Security Council from approving atomic-control plan favored by majority.
- June 28—Stalin and Tito break.
- Aug. 15—Independent Republic of Korea is proclaimed, following election supervised by U. N.
- Nov. 4—General Assembly approves U. S.-sponsored atomic control plan.
- Nov. 12—Verdict in Japanese war trial: Tojo and 6 others sentenced to hang (hanged Dec. 23); 18 imprisoned.

1949

- Jan. 7—Cease-fire in Palestine.
- Jan. 20—Truman proposes Point 4 Program to help world's backward areas.
- Feb. 8—Cardinal Mindszenty sentenced in Hungary to life imprisonment.
- Feb. 24—Israel signs armistice with Egypt.
- Apr. 4—Start of NATO; treaty signed by 12 nations.
- May 11—U. N. admits Israel.

Sept. 21—German Federal Republic (West Germany) established.

Sept. 24—Truman discloses Russia has set off atomic explosion.

1950

Jan. 13—Russia boycotts Security Council (until Aug. 1) because Red China was refused admittance to U. N.

Jan. 31—Truman orders development of hydrogen bomb.

June 25—North Koreans cross 38th parallel to invade South Korea.

June 27—Truman orders U. S. air and sea aid to South Koreans.

June 27—Security Council (at that time boycotted by Russia) calls on U. N. members to help repel North Korean aggression.

Oct. 7—U. S. 1st Cavalry makes 1st U. S. crossing of 38th parallel.

Nov. 20—U. S. 7th Division unit reaches Manchurian border.

1951

Feb. 1—General Assembly condemns (44-7) Red China as an aggressor.

Mar. 19—6 nations initial Schuman Plan to pool European coal and steel market. (In effect Feb. 10, 1953.)

Apr. 11—Truman removes MacArthur from all commands.

June 23—Russia proposes truce.

July 10—Truce talks begin in Korea.

Sept. 8—Japanese peace treaty signed in San Francisco by 49 nations.

1952

Feb. 6—George VI dies; his daughter becomes Elizabeth II.

Feb. 20-25—NATO conference approves European Army; sets goal of 50 divisions and 4,000 planes by end of 1952.

May 26—Western Allies and West Germany sign peace contract at Bonn.

1953

Mar. 5—Stalin dies.

Mar. 6—Malenkov becomes Soviet Premier; Beria is Minister of Interior; Molotov is Foreign Minister.

Apr. 10—Dag Hammarskjöld begins term as U. N. Secretary General.

June 8—Agreement on POWs reached at Panmunjom; India to head 5-nation commission for custodianship of POWs refusing repatriation.

June 17—East Berliners rise against Communist rule; quelled by tanks.

June 18-21—Pres. Rhee frees 27,000 anti-Red POWs in defiance of U. N.-Red prisoner agreement; truce talks halted June 20.

July 10—Truce talks are resumed.

July 27—Korean armistice signed.

Aug. 20—Moscow announces explosion of hydrogen bomb.

1954

Jan. 21—1st atomic-powered submarine *Nautilus*, launched at Groton, Conn.

Jan. 26—U. S. Senate ratifies (81-1) mutual security treaty with Republic of Korea.

May 7—Dienbienphu falls to Indochina Red rebels.

July 21—Indo-China truce signed at Geneva conference; Reds get half of Vietnam.

Sept. 6—Eisenhower launches world atomic pool without Russia.

Sept. 8—8-nation Southeast Asia defense treaty signed at Manila.

Oct. 23—West Germany is granted sovereignty and is admitted to NATO and Western European Union.

1955

Jan. 17—Submarine *Nautilus* goes to sea under atomic power.

Apr. 5—Churchill resigns; Eden succeeds him Apr. 6.

Apr. 12—Scientists OK Salk vaccine.

May 31—Supreme Court leaves school desegregation to regional Federal courts.

July 16—Hungary releases Cardinal Mindszenty. (See Feb. 8, 1949.)

Sept. 19—Argentina ousts Perón.

Sept. 24—Pres. Eisenhower suffers coronary thrombosis in Denver.

Sept. 27—Egypt to buy Soviet arms.

1956

Feb. 22—U. S. releases 40,000 kg. of Uranium 235 (worth \$1 million) for peaceful atomic power at home and abroad.

Mar. 9—Archbishop Makarios of Cyprus is sent into exile by Britain.

Mar. 20—Khrushchev calls Stalin murderer. (Speech made Feb. 24.)

Apr. 7—Spain proclaims Spanish Morocco independent after 44 years.

May 21—First aerial H-bomb test over Namu I., Bikini Atoll (10 million tons TNT equivalent).

June 9—Eisenhower undergoes operation to relieve blockage of small intestine due to ileitis; physicians say he will be physically fit to run for re-election.

June 12—Scientists report radiation peril to future of race.

June 28-30—Workers' uprising against Communist rule in Poznan, Poland crushed by tanks.

July 19—U. S. withdraws its offer to help Egypt build Aswan dam on Nile.

July 26—Egypt announces seizure of Suez Canal control.

Sept. 29—France and Germany agree that the Saar will return to Germany Jan. 1.

Oct. 19—Japan and Russia sign agreement ending technical state of war.

Oct. 21—Polish Communists restore Wladyslaw Gomulka to power, as party First Secretary.

Oct. 24—Soviet troops and tanks in Hungary fight anti-Communist rebellion, Imre Nagy is new premier.

Oct. 26—82 nations agree at U. N. on new International Atomic Energy Agency for peaceful use of atom. U. S. offers it 11,000 lb. of Uranium 235.

Oct. 29—Israel launches attack on Egypt's Sinai Peninsula and drives toward Suez Canal.

Oct. 31—British air attacks begin in Egypt.

Nov. 4—U. N. assembly votes to organize U. N. police force to restore peace to Egypt.

Nov. 5—British and French invade Egypt at Port Said.

Nov. 6—British, French cease fire at Port Said and halt Suez advance.

Nov. 23—Russians kidnap Hungary's Premier Imre Nagy and replace him with Janos Kadar.

Dec. 12—U. N. General Assembly condemns Russia for aggression in Hun-

gary. Vote: 55 yes, 8 no, with 13 abstaining.

Dec. 22—Anglo-French forces withdraw from Egypt.

1957

Jan. 5—Eisenhower asks special joint session of Congress for power to use military and economic aid in Middle East—Eisenhower Doctrine.

Jan. 9—Prime Minister Anthony Eden resigns after only 21 months in office; succeeded by Harold Macmillan, Chancellor of Exchequer, on Jan. 10.

Mar. 5—Eisenhower Doctrine for Middle East passes Senate, 72-19; House completes Congressional approval, 350-60, on Mar. 7.

Mar. 6—New nation, Ghana, formerly British colony in Africa known as Gold Coast, attains full independence.

June 24—Scientists tell Eisenhower we now can produce nuclear weapons 95% free of radioactivity.

Aug. 31—Federation of Malaya comes into existence as newest free nation in world.

Sept. 24—Eisenhower sends Army troops to Little Rock, Ark., to quell mob and protect school integration.

Nov. 3—Soviet Russia launches earth satellite with dog in it.

Nov. 26—Eisenhower suffers slight stroke.

(For later events, see pages 14-16.)

Addenda To World Politics Section

U.S.S.R.

When the United States and Great Britain proposed a negotiated temporary suspension of nuclear weapons testing (initially for a period of one year), the Soviet government resumed its own testing, allegedly to match the number of nuclear blasts set off by the Western powers. In a note of October 30, the Soviet government turned down the Western proposal for a one-year suspension and insisted that it would "continue to press for the immediate and universal stoppage of nuclear tests for all times."

THE MIDDLE EAST

Tunisia broke off diplomatic relations with the United Arab Republic in mid-October, and Tunisia's President, Habib

Bourguiba, denounced Gamal Abdel Nasser's schemes to dominate the Arab world "from Casablanca to Damascus."

The Soviet Union agreed to lend the United Arab Republic 400,000,000 rubles (\$100,000,000 at the official Soviet rate of exchange) to help in the construction of the Aswan Dam.

PAKISTAN

President Iskander Mirza dismissed the Cabinet and suspended Parliament in early October, decreed martial law on October 8, and on October 27 handed over all powers to General Mohammed Ayub Khan, who had just assumed office as Pakistan's eighth Prime Minister.

PEACE OR WAR IS THE PEOPLE'S BUSINESS

By DAN GOLENPAUL, Editor

Today we buy our daily newspapers and are almost afraid to look at the headlines, for they usually scream about trouble in some country of the world. Revolts and counter-revolts seem to be routine happenings, but sometimes they occur in areas where the interest of the great powers are in conflict, and then the possibility of a world war arises.

Wherever and whenever it happens it is bound to touch our shores. At the present time we are involved in treaties with approximately forty-three countries throughout the world, and we have military bases in approximately twenty-two countries. We are giving financial help through our government and through the International Bank to forty-eight countries.

Our traditional policy of neutrality and isolation is a thing of the past. We are now one of the two great powers of the world with all the responsibility that goes with power. Our defense depends upon military strength and a sound foreign policy.

How can we find the answers to the urgent world questions? To a large degree we rely upon the experts in our government. But even with experts, the people of the United States must have the knowledge and ability to evaluate the policies of our government.

Every man, woman and child will share in the consequences of a world war, and it would seem imperative that they, therefore, share in any decision which might commit us to war.

No Referendum

We are not suggesting that any question involving our foreign policy and military actions be subject to any form of referendum. However, the next war will be one of annihilation, and it seems inconceivable that we should depend on any individual to make this fatal decision for us.

Traditionally, our President is required to provide leadership in international affairs and, to a lesser or greater degree, to consult and accept the guidance of Congress. Congress, on the other hand, is sensitive to public reaction.

This communication between the people and government is a decisive factor in determining the course of action on most of the important issues before the country.

During the Quemoy and Matsu crises, the people spontaneously wrote the State Department expressing opinions—pro and con. According to the State Department, the majority of the correspondence found fault with the State Department's position by a ratio of 4-1.

This expression of the people provoked a high administration official to scold both the State Department and the press for revealing the fact that a majority of the letters were opposed to the government's policy.

It would be unfortunate, indeed, if we were persuaded to abandon what is our privilege and duty: to make our opinions known on any question to the government.

It would be better for all concerned—the people and the government—if opinions were based on information and understanding of the issues at stake. Therefore, it is tremendously important for all Americans to be informed about the world situation.

World Politics Today

In our section "World Politics Today" we are making an effort to provide our readers with the information they need to help them appraise and understand the constantly recurring crises.

This special section on "World Politics Today" brings together a distinguished group of contemporary historians.

They are picturing the world as they see it today through expert eyes. I am sure that I am not exaggerating when I say that any individual who reads these pages of a world panorama today will develop a clearer picture of the United States and other countries of the world. This was my experience when I read all the material.

I was stimulated by Henry Steele Commager's glowing description of what the United States means. Our position may be blurred and distorted by the fast-moving, critical events today, but the true meaning of our nation is expressed in the following quotations from Professor Commager's article:

"... Notwithstanding a nineteenth century tradition of 'isolationism,' the United States had never been truly isolated from the Old World, either in fact or in principle. Even when Americans fought for independence they were conscious of larger obligations to the rest of the world, and addressed their argument to 'the opinions of mankind.' In the last of his *Crisis* papers, Tom Paine congratulated the new nation that it was 'in our power to make a world happy.' Washington, in his last wartime message to the states, reminded his countrymen that 'with our fate will the destiny of unborn millions be involved...'

"... the United States has grown to be a world power without imperialism in its traditional meaning. It has engaged in four successful wars, two of them world-wide wars, without acquiring (with minor

exceptions) territory or other material rewards . . .

" . . . since World War II the American people have used their wealth and power for the rehabilitation of the economies of war-torn countries, and for stimulating the economies of backward peoples . . ."

In the article on the United Kingdom by Walter James we find a revelation of England's great capacity for realism, pride, and humility. Here are some quotations from his article:

" . . . The Suez stroke was delivered in the confidence that once it was started, America would join in. She did not, and the bitterness was great . . .

" . . . This interdependence does not come easily to the British. The role of junior partner is hard to learn. Yet the lesson is driven home constantly by the facts of Russian power . . .

" . . . Although Britain's basic interests incline her persistently towards America, it is a love-hate relationship. There is a feeling of kinship, but family relationships are notoriously difficult . . ."

The discussion of the Federal Republic of West Germany by Professor Louis Snyder poses this serious question:

" . . . Will she [West Germany] be able to abandon her past drives for world domination and merge successfully with Free Europe, or will she be tempted once again to seek political and military power by playing off West and East against each other? . . ."

When we read the article by Professor Paul Zinner on Czechoslovakia we become aware of this interesting and encouraging revelation. Referring to the June, 1958, Congress of the Communist Party of Czechoslovakia, he says:

" . . . Among shortcomings noted at the Congress was apathy by the population toward active participation in party affairs. The age and social composition of the party has been deteriorating, showing a lack of interest among the youth and the workers in identifying themselves with communism . . ."

We find another advance and promise for the association of nations without their surrendering their sovereignty in a quotation from C. Hartley Grattan's article on the Commonwealth of Nations:

" . . . The Commonwealth of Nations is, then, a peculiarly British political invention, a way of bringing into special association nations recognized in international law as independent countries . . .

" . . . The relations of the members to one another and to the outside world are determined by the members individually and insofar as they share a common attitude or policy it finds expression only through voluntary consultation and co-operation . . ."

These quotations and others used below are a very small clew to much of the

stimulating, informative material the reader will find in "World Politics Today."

World Power

Our world leadership role may have been predestined; nevertheless when it came upon us we were unprepared. We have much to learn and will need time to acquire the necessary experience.

Although our emergence as a world power may date with the turn of the century, the full impact of our responsibility did not develop until the beginning of World War II.

Our limited experience is aggravated by other factors. At this stage of world history nationalism has become a positive force. Most nations have achieved independence or are in the process of making their bid for sovereignty.

In the era of colonialism, world imperialistic powers dictated policies to their colonies which had no choice but to submit. The United States sympathy has always been with colonial nations who were striving for independence.

Dealing with scores of nations who are now independent and burning with nationalism presents difficult problems. Whether they are small or large nations they have not only found their place in the sun but they have also found an extraordinary trading position in the cold-war struggle.

India, the largest of the new independent countries, is led by Prime Minister Nehru, who has been in office since 1947. Frank Trager, who writes about India, makes this appraisal of Nehru:

" . . . It is Nehru's resolve to make India count for a great deal or not count at all. He has been the mainspring of Indian action since India's independence. That is why Nehru himself is not only Prime Minister but also Minister of External Affairs, personally in charge of the Department of Atomic Energy, and virtually his own minister for national planning as well. No middle position for India or for him; it does not attract him. He has determined that India will plan a major role not only in Asia, but also in the councils of the nations everywhere, including the United Nations . . ."

Nationalism

The upsurge of nationalism has presented Prime Minister Nehru with an excellent stage on which he can play a major role in world affairs. In these turbulent times many opportunities have developed for him to exercise leadership and influence. He has become a force in the policy of positive neutralism, winning supporters and creating competitors.

Prof. J. C. Hurewicz, in his article on the Middle East reporting about Gamal Abdel Nasser, writes as follows:

" . . . in the Conference of Asian States at Bandung where he met Prime Minister Nehru of India and Chou En-Lai of Com-

munist China . . . Nasser became an advocate of positive neutralism for Egypt and the Arab world . . . this meant the acceptance of aid from the Soviet bloc to kick over all the traces of Western interests and influence in the Middle East . . ."

It is indeed an unenviable position for any power to deal with the complexities and antagonisms of nationalist movements. The United States, which has contributed much to India's independence and the independence of other nations, is caught between crossfires.

On October 24, according to a *New York Times* story, we were attacked by Field Marshal Viscount Montgomery, who asserted that United States policy has worked to destroy the influence of Britain, France, and the Netherlands in Asia and Africa at a time when those countries might have been stabilizing influences.

While we are now attacked by Field Marshal Montgomery for encouraging independence for nations throughout the world, every colonial or former colonial nation characterizes and condemns the United States as the leader of Western imperialism.

The force of nationalism sweeping through the world presents us with a difficult and thankless position. On the other hand, nationalism gives the U.S.S.R. a rich field for propaganda.

Economic Independence

The colonial and former colonial nations fired with nationalism do not possess the immediate capacity for economic independence or military strength. All of these nations are struggling against low standards of living and lack of education. Their vulnerability make them easy prey for Soviet Russia and Communist China. This is indicated in our article on Southern Asia:

" . . . The brooding colossi of Communist China and Soviet Russia hover over the whole area . . ."

The infiltration of these nations by the usual devastating Communist techniques has strong prospects of success. The pattern, of course, may vary, but the results will probably match those that happened in Europe.

The constant Russian expansionist drive is really naked imperialism, and a perversion of their ideological Communist objective of world conversion. Speaking before the 20th Congress of the Soviet Communist Party in February, 1956, Khrushchev said: "The fact that we support peaceful existence does not mean that one can relax in the struggle against bourgeois ideology."

Speaking to Americans, Khrushchev made this clearer when he said: "We will bury you, and your grandchildren will live under communism."

The Russians are an implacable foe.

They are cunning, treacherous, and ruthless. The problem we face in dealing with them is whether we should try to emulate the tactics that totalitarian nations employ with impunity. The people of the free world find them repugnant.

To meet Russia's challenge we must develop a program and strategy that is intelligent and courageous, possessing the idealism that will be inspiring to the peoples of the world.

There does not seem to be a magic formula to resolve international conflicts. Therefore, we should perhaps resort to a simple formula that will at least fortify the country against any Communist threat.

Professor Henry Graff in his article on the making of American foreign policy discusses the relationship of the Executive and Legislative branches of the government and the public.

I think that all these groups should participate in formulating a declaration of American foreign policy that will provide the American people with a clear definition of what our foreign policy is. For the implementation of our policies we must of course depend upon the competence and the experience of our government officials. A declaration of American policies should not interfere with the constitutional and traditional performance in the conduct of foreign policy. With all due respect to our leaders, though, I don't believe that the omniscience of any individual is greater than the collective intelligence of the entire nation. I offer a simple, and what I think is a practical, plan:

When the new Congress convenes, the entire State Department, in close collaboration with the Foreign Relations Committee of the Senate and the Foreign Affairs Committee of the House, should prepare what they believe is the proper definition of our objectives for security and world peace.

When they agree upon a proposal for a declaration of American foreign policy, it should come before Congress for debate. At this stage the entire nation through its press, educators, professional people, working people, farmers, business organizations—every segment of our nation—should participate in the discussion.

When a declaration of American foreign policy is adopted, it would be the result of the participation and thinking of the entire nation. It would be something we will understand and be ready to defend with all our might, and a declaration that will inspire the entire free world.

If you think this plan has merit, write us. Perhaps your Senator and Congressman would also welcome comments. Editor.

THE UNITED STATES: 1789-1958

By

HENRY STEELE COMMAGER,

Professor of History, Amherst College; Adjunct Professor of History, Columbia University

I

WHEN, on the last day of April, 1789, Washington took the oath of office as President of the United States, the new nation was already one of the largest on earth—larger by far than Britain or France, Austria or Spain. It was made up of thirteen States, stretching along the Atlantic seaboard from Maine to Georgia, one state—Vermont—ready to come into the Union, and a vast hinterland westward to the Mississippi. This immense territory of a little less than 900,000 square miles was sparsely inhabited. The total population of the nation was just under 4,000,000; of these some 750,000 were Negro slaves, and perhaps 100,000 were Indians, roaming the wilderness west and south of the Appalachians.

Almost all of these 4,000,000 people lived on farms or in country villages. There was not a city in the country as large as Holyoke, Mass., or Canton, Ohio, or Pueblo, Colo., today; the largest city, Philadelphia, boasted less than 50,000 inhabitants. The population was mixed, but the mixture was predominantly from northern Europe—chiefly the British Isles and Germany—and, of course, from Africa, for the slave trade was not officially ended until 1808. Immigration was already changing the ingredients of the population, though far greater changes were ahead with large-scale immigration from Ireland and the Scandinavian countries; restrictions on immigration did not appear for almost a century. The chief occupation of the people was farming; a small minority engaged in fishing, whaling, sailing, commerce, and domestic manufactures. The overwhelming majority of Americans were Protestant Christians; in the cities could be found a sprinkling of Jews; and a substantial number of Catholics were concentrated in Maryland.

One hundred and seventy years later the material scene had changed dramatically and profoundly. Indeed, in all modern history, no other people had experienced such revolutionary changes in size, power, and wealth so rapidly or so easily. The United States of 1959 was a nation of close to 175 million inhabitants covering a vast area from the Atlantic to the Pacific,

from the Great Lakes to the Gulf of Mexico, and Alaska, to boot—a total area of 3,600,000 square miles. This four-fold increase in area was far outstripped by a forty-fold increase in population—an increase which was cumulative. In the single decade of the 1950's, population increased as much as during the first 250 years of history of English America, or as much as the first seventy-five years of the history of the Republic. The United States changed, too, from a nation predominantly rural to one predominantly urban: by 1959, there were four metropolitan areas with a population larger than that of the whole United States in 1789, and sixteen with a population of over one million. There were now forty-nine states instead of thirteen and—what would have been inconceivable to the Fathers—one of them—Alaska—was not even contiguous. The increase in wealth had been even more rapid than the increase in size and population, and by 1959 the United States was indubitably the wealthiest nation on the globe.

It is almost fatally easy to assume that these fantastic material changes in the United States carried with them comparable changes in character and in institutions. That would be a signal error. Not change but similarity is the most striking feature of the American political and social and even cultural scene over this period of years: it is symbolic that almost alone of modern nations the United States had never had a revolution. If we look at the statistics of the United States in 1789 and 1959 we might conclude that we are contemplating two different societies; if we look to the institutions and the culture we are forced to conclude that the society is qualitatively the same. Hector St. John de Crèvecoeur's classic description of the American, written in 1780, fits well enough the American of 1959.

Indeed we might almost say that the price of tremendous change in the material realm has been permanence and stability in the realm of institutions.

The United States in 1789

What, briefly, were the basic institutions of the United States in 1789?

First, nationalism itself. The United States was the first of the "new" nations—the first colony to detach itself from a mother-country and set up on its own, the first nation deliberately formed by its people into an independent state. Its constitution was dedicated to the creation of a "more perfect union," and the success of its experiment depended—as Washington himself pointed out—in the first instance on the union holding together—that is, on the success of the experiment of nationalism.

Second, the United States was organized on the basis of federalism: that is the distribution of power among governments on some agreed-on basis, with some system for the enforcement of the terms of the agreement. The federal system of thirteen states has grown now to a federal union of forty-nine. There have been some quantitative alterations in the power of national and state governments, but the qualitative division remains much the same. Certainly whatever the modifications of federal-state relations in the last century, no one would ever confuse the American system with, for example, the English or the French or the Spanish. Ours is still not only a federal republic, but the model for federal republics throughout the globe.

Third, the United States provided from the beginning for expansion on the principle of equality. At the very outset the new nation repudiated the ancient and traditional system of colonialism—the system adopted by and used by every other country—which held that colonies are subordinate to the Mother Country and exist for the benefit of the Mother Country. Americans, indeed, did away with the very word "colony" and substituted for it the term "territory" and "state." On the basis of the enlightened principle of equality of territory and mother country, the United States expanded westward to the Pacific with less trouble than Britain had with Ireland or Sweden with Norway in the nineteenth century. The principle of equality was applied just last year to the Territory (e.g. colony) of Alaska, and enabled the United States to absorb that large and distant area into the federal system; it will doubtless soon be applied to the even more distant Territory of Hawaii.

A fourth basis of the American system of 1789 was self-government. This was more than a principle; it was a practice as well. The doctrine that men make government, and can alter or abolish it and institute new governments, was set forth eloquently in the Declaration of Independence. It was then actualized into a workable institution in the Constitutional Convention. Beginning with Massachusetts

one state after another adopted the institution of the Constitutional Convention as the only sound method for drawing up fundamental law. From the United States this institution spread throughout the globe—to France, to the states of Latin America, to the member-states of the British Commonwealth of Nations like Canada and Australia. We still use it today whenever we want to change the Constitution of a state, but we have largely forgotten its revolutionary significance.

Self-government flourished not only in the institution of the Constitutional Convention but in the habit of participation in the daily business of government. That habit, too, was of long standing: it can be dated from the compact drawn up in the hold of the *Mayflower* and the first legislative assembly of the colony of Virginia. It is safe to say that in 1789 more Americans participated in the ordinary business of government than did any other peoples, with the possible exception of the Swiss and the Icelanders. Suffrage was, by the standards of the time, very broad, and a large proportion of white adult males could vote and could hold office. All through the nineteenth century suffrage expanded, and so did other forms of participation in politics. Eventually the rest of the world caught up with the United States and some countries even passed her in the proportion of popular participation in government.

Perhaps the most important mechanism for popular control of government and the fifth basic institution is the political party. Parties, as we know them, did not exist in 1789, but they did come into existence within five years or so. It may be said without exaggeration that Americans invented the modern political party, and that the party has assumed its most characteristic form in the United States. It is worth noting that the political party emerged in the United States in a special way: it was national, not local; it addressed itself to immediate and practical problems rather than to the championship of theories; it differed from other parties rather in method than in philosophy. It is no less important that we started out with two parties, and have kept a two-party system to the present. Indeed most of the original features of the party remain: parties are, today, practical rather than theoretical, national rather than local or class, and they differ from each other more in men and methods than in principles.

A sixth institution that flourished at the beginning of the Republic was the separation of church and state and the principle of religious freedom. We take these for granted now, but in fact they

represented something new under the sun—anyway under the western sun. The United States was the first modern nation to try the bold experiment of separating church and state and to establish complete religious freedom. These principles of separation of church and state, and of religious equality and freedom, were first written into some of the State Constitutions, then into the First Amendment to the Federal Constitution. It is in part, at least, because the United States started with freedom and voluntarism in religion that it has avoided most of the religious difficulties and quarrels that have afflicted other western nations.

Social Equality

The first of the truths which Jefferson stated to be self-evident was that all men are created equal, and a seventh institution, or practice (it is, of course both), of the new United States was equality. The "American Farmer," Crèvecoeur, noted in 1780 the prevalence of social equality among the Americans and noted, too, that one of the foundations of this equality was easy access to land. Thereafter, almost every European visitor has been struck by the same phenomenon—a social equality that had its origins in real or potential economic equality. At the beginning there were differences, to be sure, even among the whites: differences between the planter and the indentured servant, between the merchant and the fisherman, between the lawyer and the laborer. But these differences were narrow by European standards and were not transmitted from father to son—or to daughter. Legally American society was, aside from Negro slavery, classless; in fact, too, it was largely classless, for there was a larger degree of social and economic equality than was to be found elsewhere in the western world.

What explains the prevailing equality of 1789; what explains its persistence into our own time? Partly the absence of legal distinctions: no titles, no aristocracy, no provision for the inheritance of the first-born, no entail of estates to a family; partly the existence of immense untouched resources available for those who were willing to work; partly the continuous westward movement, and continuous large-scale immigration, which had the effect of breaking up and reforming the social fabric all the time; and partly, too, a philosophy which insisted that a man was to be judged not by family or wealth but by character and ability.

An eighth institution, or practice, closely connected with and in a sense basic to many of the others, was that of free public education. It is fair to say that the stand-

ards of literacy in the United States of 1789 were higher than those which obtained in any other nation at the time. Interest in education made itself felt almost from the beginning: the Boston Latin School was established in 1635, Harvard College in 1636, and the first compulsory public education law passed in 1647. To be sure, there was no such thing as universal free public education in the United States in 1789—that was still an ideal, but it *was* an ideal, and already as early as 1785 Congress had moved to set aside public land in the west to the support of public schools. All through the nineteenth and twentieth centuries the United States led the world in the proportion of the population enjoying some form of education and in the proportion of the population exposed to higher education. Today something like 3,000,000 Americans attend college, university, or professional school: the number may be compared with the 100,000 or so attending British universities.

Private Enterprise

A ninth practice which flourished in 1789 was private enterprise. The English colonies in America, in contrast to the French and the Spanish, had been founded largely by the enterprise of joint stock companies, or of churches, rather than of government, and their freedom from onerous governmental restrictions was doubtless one reason why they flourished. The new United States of 1789 had a further advantage: it started out, as it were, with a clean slate, without vested interests or commitments that might oppose insuperable obstacles to the talents and the enterprise of individuals. There was no powerful central government to establish or exercise monopoly. There was no strong army or navy to require the subordination of private interests to the supposed interests of the military, or to enjoy special privileges. There was no established church, and the whole field of religion was wide open to voluntary enterprise—which is one reason for the proliferation of denominations. There was no landed aristocracy controlling or preempting land or other natural resources; these, too, were available to those who had the enterprise and the foresight to secure them. And there was no rigid class hierarchy which circumscribed the area of activity on the part of ambitious individuals, or condemned them to particular services and duties. Finally, and most important of all, enterprise flourished in the realm of thought. The Bills of Rights, state and federal, went far to guarantee that freedom from governmental interference essential to complete freedom of expression

and of association, and to assure that the new nation would have the inestimable benefit of scrutiny, criticism, and advice, and that the economy would benefit from the same free-ranging criticism and inventiveness.

All of these institutions, in turn, made possible a tenth institution, or practice: that of voluntary association. The French observer Alexis de Tocqueville, in his magisterial study *Democracy in America*, concluded that the habit of voluntary association was one of the master keys to the American character. Whatever, he said, was customarily done by government in France or Spain, was customarily done in America by private individuals banding together into voluntary associations. The voluntary association has been, from the beginning, one of the basic American institutions, and it still is. Every political party, every church, every labor organization, every professional association, every fraternal order is a private voluntary association. In the United States men and women band together to build a hospital, found a college, carry through a reform, further business or professional activities, carry on humanitarian operations, or enjoy common interests, and American society consists of a labyrinthine network of voluntary associations.

II

These institutions and practices, then, provide the framework within which the United States experienced its immense growth since 1789. There have, to be sure, been modifications of these practices; there have been elaborations on and additions to them. But by and large they have persisted and flourished, and operate today pretty much as they did 170 years ago. Their persistence indicates that change in America has been more quantitative than qualitative, and that Americans have not departed radically from the principles they embraced and the practices and habits they adopted at the threshold of their history.

There have, however, been important developments that have conditioned and even directed the growth of the nation over the years. It will be sufficient if we mention some of the more important of these:

1. The Civil War, which tested the Union and, in the end, strengthened it; which settled forever the question of state sovereignty and of secession; which led to Constitutional changes that assured greater authority to the national government; and which provided Americans with an important body of symbols, traditions, and legends.

2. The destruction of slavery and the emancipation of the Negro. That emanci-

pation was, at first, largely physical; only over the years has it been extended to the civil, the political, and the social life of the Negro. That process is not yet complete.

3. A policy of unrestricted immigration which brought in some forty millions of peoples from every quarter of the globe. Beginning in the 1920's, to be sure, effective restrictions were established, but even these did not apply to the countries of the western hemisphere. Unrestricted immigration has been one of the most effective instruments for the rapid development of the resources of the continent, for the rapid increase in wealth, for the growth of economic and social democracy.

4. Expansion to the Pacific, and exploitation of the richest body of natural resources available to any nation up to our own time. The existence of these resources of soil, water power, forest, oil, gas, coal, iron, and precious metals has been largely responsible for American leadership in industry and in wealth.

5. In large part, as a result of the availability of natural resources and of an adequate labor force, the spectacular increase in the standard of living until it became one of the highest in the world, and the highest in any of the large and populous nations.

6. The industrial revolution and the shift from farm to factory brought with it the organization of industry into giant corporations, of finance into giant banks, and of labor into giant unions. These and other great concentrations of power represented a serious challenge to the welfare of society and of nation.

7. Concentration of control in the economy was paralleled, however, by the growth of the authority and the competence of the government in the same realm. Gradually, and since 1933 with increasing effectiveness, government extended its authority over the entire economy, regulating it in the public interest.

8. This growth of the regulatory power of government was matched by a growth of governmental authority in the realm of social services. In the second quarter of the twentieth century the concept of the welfare state, already familiar in western Europe, was gradually accepted; its acceptance was dramatized by the espousal of social security by both major parties.

The Pattern Remains

Happily these developments did not seriously disrupt the pattern of American society or economy. Only two of them were accompanied by violence—the Civil War and the destruction of slavery. All the

others were fitted into the existing framework and adapted to existing practices with relative ease. Thus, over forty million immigrants were absorbed into the social and political body and within a short time, newcomers from the most distant countries became indistinguishable from native-born Americans. Westward expansion, though it strained, did not disrupt the ties of union. It spread population over a vast territory, but so rapid was the growth of population that emigration did not weaken the eastern sections nor were successive Wests condemned too long to linger in a frontier and undeveloped state. Nor did internal mobility, on a scale not known since the barbarian invasions of the Roman Empire, disrupt American society; on the contrary, Americans adapted themselves with wonderful ease to volcanic changes, and managed to make each new section or community much like the one they had left. Rapid increase in the standard of living did threaten for a time to array class against class, but the danger was averted, class warfare in the Old World sense of the term unknown, and in the twentieth century those who profited most from the rise in wealth and in standards of living were the poorer two-thirds of the population. By mid-twentieth century the nation was in sight of the ideal of the abolition of poverty. Not only did the nation avoid class warfare; it avoided, too, that clash of giant interests which so often before had destroyed governments and disrupted societies. In course of time a working equilibrium between industry, capital, labor, and agriculture was achieved; 170 years after Madison had advanced the novel theory of strength through a balance of interests, that theory was vindicated in the American economy. Not only did government prove itself strong enough to regulate sections, classes, and interests, but undertook responsibility for providing in a positive fashion for the public welfare. This is the meaning of those developments inaugurated by Theodore Roosevelt, and which reached their logical climax under Franklin Roosevelt and Harry Truman—the growth of a welfare state which avoided both extremes of authoritarianism and operated within the framework of the democratic tradition.

III

So much for the domestic scene. Here it is no exaggeration to say that the American people were enlightened, prosperous, progressive, and peaceable, and that they had achieved as much as could reasonably be expected from any people. Would the institutions and practices which had proved effective in the domestic realm

prove equally efficacious in the international arena?

Notwithstanding a nineteenth century tradition of "isolationism," the United States had never been truly isolated from the Old World, either in fact or in principle. Even when Americans fought for independence they were conscious of larger obligations to the rest of the world, and addressed their argument to "the opinions of mankind." In the last of his *Crisis* papers, Tom Paine congratulated the new nation that it was "in our power to make a world happy." Washington, in his last wartime message to the states, reminded his countrymen that "with our fate will the destiny of unborn millions be involved," and sounded the same note in his Inaugural Address: "the preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered as deeply and finally staked on the experiment intrusted to the hands of the American people." Jefferson, Lincoln, and Wilson sounded the same note, and so did Walt Whitman and James Russell Lowell and Stephen Vincent Benét.

These early references to "mankind" were, to some extent, mere literary usages. At the time the concept of "mankind" was a limited one; it meant what we would call today the Atlantic community. As American interests expanded, and as immigrants came from new quarters of the globe, American notions of mankind, and American sense of obligation likewise expanded to take in the peoples of all continents. By the end of the nineteenth century the United States found herself a world power, with commitments in every quarter of the globe; as her power grew, so too did her commitments. How did the United States discharge the obligations that go with power?

World Power

We have had, now, some sixty years in which to learn the lessons and the responsibilities of world power. This is a long time in American history, but a short time in world history. It took Great Britain over a century to learn how to conduct herself as a world power, and no other nation ever really learned. Furthermore, the United States was called upon not only to be a world power, but to head a great coalition of nations; she was expected to play in the twentieth century the role that Britain had played in the nineteenth—but without any other nation to play the role that the United States had played!

If we look to the sixty-year record what do we find?

First, the fact itself. The United States is today one of the two or three great

world powers, its concerns extending to every country of every continent and embracing, for good measure, the Arctic and the Antarctic as well.

Second, that the United States has grown to be a world power without imperialism in its traditional meaning. It has engaged in four successful wars, two of them world-wide wars, without acquiring (with minor exceptions) territory or other material rewards.

Third, the United States has extended her trade and her business to every quarter of the globe without involving herself in economic imperialism. For a time the United States was caught up in some forms of economic imperialism—particularly in the Latin American countries and in China. But President Wilson repudiated what he called "dollar diplomacy" and that repudiation has stuck. That the United States (like Britain) is interested in maintaining unimpaired large investments in oil in the Middle East is readily acknowledged, but there is no evidence that economic considerations (as distinct from considerations of defense and security) have controlled official policy in this area. It is worth noting that the areas of largest American investment are the most independent of American authority: Canada, notably, and Western Europe.

Fourth, since World War II the American people have used their wealth and power for the rehabilitation of the economies of war-torn countries, and for stimulating the economies of backward peoples. Under the Marshall Plan (renamed the European Recovery Program), the Organization for European Economic Cooperation, and the technical assistance program, the United States has made available over sixty billion dollars of aid, economic and military, to other countries. Not unnaturally the United States has hoped that the countries and people who have received this aid would be sympathetic to American policies, and would not ally themselves with communism, but there have been no formal strings to this vast foreign aid.

Fifth, American influence has spread throughout the globe not so much through formal economic aid, and even less through political pressures or cultural propaganda, but by force of example. What we are witnessing is not an imposed but a voluntary Americanization of much of the rest of the world. American science and technology, the American habit of making labor saving machinery—washing machines, electrical refrigerators, vacuum cleaners, automobiles, and so forth—available to all; American expectation of a high standard of living for the common man; the American habit of equality between

the sexes; American motion pictures, recorded music, magazines, and books—all of these have spread across the earth by their own force. This spread of American machines, American gadgets, American food and drink habits, and American popular culture has aroused the bitterest kind of hostility among privileged groups abroad, but proceeds apace notwithstanding this hostility and promises to increase rather than to decrease.

Sixth, the United States has been required by two world wars, and by the demands of leadership of the free nations against communism, to become a major military power. The principle that the civil is superior to the military has persisted, but it is no longer possible to draw meaningful lines between the two. It would be a gross exaggeration to say that the United States has become militarized in the sense that Germany and Japan became militarized during the first half of the twentieth century, but it is no exaggeration to say that military considerations have come to permeate every aspect of American politics, economy, and society. We are not a militarized nation, but we are a military nation.

Seventh, the United States is not only head of a coalition of free nations, but a member of a group of international organizations, and is bound therefore to consult with and cooperate with the members of these other organizations. Though the United States rejected the League of Nations in 1919-20, it took the lead in creating the United Nations, as it subsequently took the lead in the creation of the North Atlantic Treaty Organization (NATO) and other international groupings and alliances. It is no longer a completely free agent in the conduct of foreign affairs.

IV

What, finally, of the prospects for the future—not the distant future (for we are by no means sure that there will be one) but the immediate future?

The problems of the immediate future differ profoundly from those of the historic past. The differences are qualitative, rather than quantitative, and this suggests that we may be at one of the major watershed of our history. It remains to be seen whether our experience and training has fitted us to solve them.

Here are some of the major problems that loom up on the horizon:

First, science and technology have brought about an unprecedented increase in population throughout the globe. The population explosion is far more serious in China and India, or in Puerto Rico and Cuba at our doorstep, than in the United

States, but it is serious here at home. Will the United States develop the resources to maintain a high standard of living for a population that may double within the lifetime of children now alive! And even if the United States can take care of such an increase in population at home, can she survive in a world where population increases faster than available resources?

Second, the technological revolution has brought with it the problem of increased longevity and increased leisure. In the past, our country has been put to it to find enough workers to do the tasks that clamored to be done; the task for the future will be rather to equip a large part of our population to use leisure time beneficially. One example of this problem dramatizes its character: at present some twenty-five million persons are involved in some form of adult education; in all probability this number will double in the next generation.

A third problem is closely connected with the first: the preservation of existing and the discovery or creation of new national resources. In the past Americans have directed their energies to exploiting their fabulously rich resources; in the future they will have to conserve them or find substitutes for them. We are running out of soil, water, forests, oil, and other resources. There are substitutes for some

of them—oil for example—but are there practicable substitutes for water? Or for soil?

Fourth, the relation of the United States to new world powers. In the nineteenth century the United States could address herself pretty much to her own concerns; in the first half of the twentieth to the affairs of the Western Hemisphere and of Europe. The great powers of the future will in all probability be China and India, and along with them an Arab confederacy. These, certainly, will challenge the position now occupied by the United States, Britain, and Russia. Americans must learn to live in a world where these new and unfamiliar nations are equal or senior partners.

Fifth, in the past two centuries—indeed ever since Franklin's experiments with the lightning rod—Americans have applied the findings of science and technology largely for benevolent purposes—to improve standards of living, to combat poverty, to wipe out disease, and so forth. Now we are confronted with the overwhelming problem of atomic power. Probably no other technological device in history has had so great a potential either for good or for evil. The problem of the ultimate use of atomic power is not one which Americans can solve by themselves, but it is one in the solution of which the American people will play a decisive role.

THE MAKING OF AMERICAN FOREIGN POLICY, 1789–1958

By

HENRY F. GRAFF,

Associate Professor of History, Columbia University

THE UNITED STATES has always been deeply involved in the problems of the rest of the world. But only in times of crisis has the interest of the American people and their leaders in foreign policy been equal to the country's needs. It seems hard to believe that in his first inaugural address, Woodrow Wilson did not feel obliged to refer to international questions at all, and that as late as 1936, Franklin D. Roosevelt could campaign successfully for reelection without mentioning them more than once—and then only casually. As a nation we were unprepared for the burdens of world leadership that fell upon us in the last generation. But ready or not, we had no choice save to bear them. Finding the right policies has become as important

and as difficult a challenge to our democracy as any that we have faced in the past.

Under the hammer blows of world-shaking events in the twentieth century, what happened to the traditional policies of the United States? First of all, we are now committed to "permanent alliances." These provide us with the military bases and the manpower we would need to supplement our own bases and manpower in the event of a war. Our alliance system is vast and complex. In 1949, we took the lead in creating the North Atlantic Treaty Organization (NATO); in 1954, we were instrumental in bringing into being the South East Asia Treaty Organization (SEATO); in 1955, we helped to establish the Baghdad Pact. Furthermore, in 1948 we aided in

the establishment at Bogotá, Colombia, of the Organization of American States. The capstone of the structure is the United Nations. It became the agency through which we conducted the "police action" in 1950 to 1953 that forestalled aggression in Korea.

The stakes for which we vie with the Soviets are enormous. They include not only the great markets of Europe, Africa, and Asia, but also the principles on which we like to believe permanent world order must rest. Secretary of State Cordell Hull once defined our purposes this way: "We want to live in a world which is at peace; in which the forces of militarism, of territorial aggression, and of international anarchy in general will become utterly odious, revolting, and intolerable to the conscience of mankind. . . ."

No President, be he Democrat or Republican, is likely to change these facts. Our responses to the Soviets have become astonishingly uniform.

In 1947, Truman enunciated what quickly became the "Truman Doctrine." He explained it: "I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures. . . ." Ten years later, in the face of new threats of subversion—this time in the Middle East—the administration in power responded with the so-called "Eisenhower Doctrine." In providing promises of economic assistance and armed aid, it restated the purport of the Truman Doctrine. We may expect to restate it again to apply to other parts of the world in the years to come.

In a world in which the struggle is for men's minds and allegiances rather than for their territory, non-interference in the domestic affairs of other countries is no longer a tenable policy. It did not seem wrong, for instance, in 1953, when Secretary Dulles openly expressed his hope that Konrad Adenauer would win a sweeping victory in the parliamentary elections for the German Federal Republic. This was a form of interference that would not have been attempted a generation ago.

Neutrality Has Gone

Our long dependence on neutrality in Europe's wars is a thing of the past. There is no such thing as neutrality for a great power. By withholding its strength from a conflict it just as surely affects the outcome as if it participates actively. Its interest lies in taking positive steps as soon as possible in behalf of the side it hopes will win.

The old principles of foreign policy having passed into limbo, what are the new

ones? The first is that the physical defense of the United States must be the prime concern of the policy makers. The "ram-parts we watch" may be thousands of miles from our shores, in the frozen north or in the steaming tropics, or they may be just across the border. Maintaining them inviolate is the business of joint military and diplomatic activity.

The second is that the United States must play an active role in the great ideological struggle in the world. This role now takes the form of financial aid through the Mutual Security Program, and psychological assistance through the Voice of America and other propaganda organizations. The United States must win the sympathy and friendship of the so-called uncommitted peoples. These are the peoples who, having broken away from dying European empires, are newly arrived at independence.

The Perspective of the Past

To form an idea of how far we have changed from our original concept of our role in the world, it is useful to go back into history.

At the beginning of our republic, the principles that guided us in our foreign relations were clear and generally accepted as representing the prevailing opinion. The early makers of our foreign policy recognized that the United States stood to gain most if it could avoid entangling itself needlessly in disputes and issues abroad, especially those in Europe. The finest statement of the foreign policy of the Revolutionary generation is contained in George Washington's Farewell Address of 1796. Washington's words were clear: "The great rule of conduct for us in regard to foreign nations is in extending our commercial relations, to have with them as little political connection as possible." Yet Washington advised his countrymen only against *permanent* alliances. "We may," he wrote, "safely trust to temporary alliances for extraordinary emergencies."

To Washington's "great rule of conduct" was added a second principle: the United States must refrain from interfering in the domestic affairs of other countries. This republic, born in revolution, felt a kinship with other republics and a strong sympathy for revolution—wherever it might help to create a republic. Nevertheless, we would take no *official* stand. The first Secretary of State formulated this policy. Said Thomas Jefferson: "It accords with our principles to acknowledge any government to be rightful which is formed by the will of the nation, substantially declared." In a word, we would recognize in our international dealings, governments which were strong enough to maintain

themselves, be they monarchies or republics.

A third principle was that whenever Europe went to war it was incumbent upon the United States to maintain a position of neutrality, and thus to avoid giving aid and comfort to either side. Until 1914 this principle served us well, even though it did not prevent our involvement in the War of 1812.

The Monroe Doctrine

Our relations with England were of a special order. Despite the War of 1812 with the Mother Country, British interests and American interests tended more and more to coincide with one another rather than conflict. Although it long was customary for politicians to strike an anti-British pose, in practice a strong basis for international friendship existed. This is illustrated in the formulation of what we know as the Monroe Doctrine.

The story of the Doctrine can be best understood against a background of far-reaching developments in Europe. The monarchs of the Continent, after the defeat of Napoleon in 1814-1815, had formed themselves into an alliance that led many to expect Spain to seek to recover her colonies in the New World, which had broken free. In August, 1823, the British Foreign Minister invited the American Minister to England to have the United States join Britain in a declaration to European countries warning them to keep hands off the Americas.

The United States, firmly guided by its brilliant Secretary of State, John Quincy Adams, rejected this unusual offer from a great power to a tiny one. Adams decided that we must go it alone in warning the crowned heads of Europe. Adams' conclusions found their way into President James Monroe's annual message to Congress of December 2, 1823, which is the source of the Doctrine that bears his name.

Shielded by the principles of Washington and Monroe, Americans turned to the formidable tasks they faced on this continent. They expanded their borders by expelling the European nations one by one: France's turn was first (by the purchase of Louisiana in 1803), then Spain's (by the cession of East Florida in 1819), and then Russia's (by the purchase of Alaska in 1867). The War with Mexico in 1846-1847 brought us California and the Southwest.

In the years that followed the conclusion of the Civil War, the principles we had held since Washington's day continued to be our guide. There was a growing body of Americans who believed that the United States could profit from owning colonies,

but Congress remained opposed to building an empire. Indeed, an arrangement in 1867 to annex the Danish West Indies was turned down by the Senate—even though the King of Denmark had already bade his subjects a fond farewell! And in 1869 a treaty providing for the annexation of Santo Domingo met the implacable opposition of the Senate, which rejected it.

Rise of Pan Americanism

Side by side with this attitude of anti-imperialism, there developed an interest in Pan Americanism. The controlling impulse of this movement to foster better relations among the Americas was commercial, although from the outset it was clearly recognized that the construction of machinery to settle disputes peacefully would be a powerful boon to good will in the Western Hemisphere.

Pan Americanism gained ground slowly, for by the 1890's the desire to own colonies was winning out in the United States, and the "Norte Americanos" aroused deep suspicion among their neighbors to the south. A change had come over millions in the United States which portended a significant change in foreign policy; the spirit of jingoism was about to triumph, bringing with it an interest in the excitement and glory of war and conquest.

This air of belligerence was owing in part to an insistent attempt by the rising generation of national leaders to develop for the country new and more adventurous ideals. In part it resulted from a desire to bring the blessings of our own people to others less fortunate. In part it arose from the belief that Americans had an unmistakable duty to take colonies in order to provide naval bases needed to protect far-flung interests.

The consequence of these stirrings was war against Spain in 1898. A series of quick but by no means easy victories caused Spain to sue for peace before the summer was over. The treaty of peace gave us the Philippine Islands, Guam, and Puerto Rico.

This treaty triggered the first great debate over foreign policy in our history—revolving on the question of whether or not we should acquire colonies. The answer we accepted was that we could serve the former Spanish colonials best by placing them under our political tutelage.

Nevertheless, the urge to acquire colonies died out shortly, and over a period of years we gradually made provision either to free our territorial possessions—as when we released the Philippines in 1946, or to give them greater autonomy—as when we created the Commonwealth

of Puerto Rico in 1952, or to bring them into the Union—as in the case of Alaska in 1958.

The ownership of colonies left its mark on our foreign policy. Soon after the Spanish-American War, we acquired the right to build the Panama Canal. This led us to take special steps to guarantee the relative stability of countries in the vicinity of the Canal Zone. The fear persisted that a failure by one of the Caribbean nations to meet its international obligations might invite foreign intervention in order to compel compliance. Our policy became one of saying to European nations that they might not chastise an American nation but that, if necessary, the United States would undertake to do it for them. This policy received formal expression in 1904 in the so-called Roosevelt Corollary to the Monroe Doctrine. In thus claiming for ourselves an "international police power" we aroused fierce hostility in Latin America. Suspicions of United States motives began to abate slowly after Woodrow Wilson promised in 1913: "The United States will never again seek one additional foot of territory by conquest."

Nevertheless, misgivings about our intentions persisted. Even the "good neighbor policy" of Franklin D. Roosevelt did not put them to rest. Today, these suspicions have been replaced by a growing belief among Latin Americans that the United States neglects their economic and social problems while concentrating on those of Europe, the Middle East, and Asia.

The Open Door in China

After we acquired the Philippines, we formalized our policy in the Orient, just as we had done in the Caribbean. But our Far Eastern policy has carried less conviction than our Latin American policy because we have wavered in defending it. It has been based on the principle that access to the China market—the value of which we have always exaggerated—must be equal for all countries. We have also declared ourselves as standing four-square against the break-up of China's territorial unity.

Although we paid lip-service to the Open Door policy in China, as the years passed we accepted the favored position that Japan was assuming for herself in Korea and in Manchuria—two regions that belonged to China. We were consistently unwilling to place the force of arms behind the policy we avowed. In 1916, as the United States found itself fettered by the war in Europe, it stood idly by while Japan carried on imperialism against China. Japan's expansionist activities continued in the 1920's and '30's.

Our insistence on the Open Door was a contributing factor in leading us to war in 1941; but when the war ended, the Door had been firmly shut despite our sacrifices in blood and treasure. Although our economic health does not depend on the China trade—and never has—our exclusion from China cuts us more deeply than any other disappointment in international relations. Our pique is based on sentiment rather than interest. Only a Pollyanna can believe that we shall see the Open Door in our time.

Still another effect of becoming a colony-owning nation in 1898 was our involvement in international politics on a larger scale than ever before. We were now caught up in currents we could not control and for which George Washington's "great rule of conduct" would no longer serve. In a world bent on having a war, the United States stood perilously alone. When hostilities broke out in Europe in 1914, few believed that the United States would have to be involved in the actual fighting. To many it seemed like part of the age-old struggle for power between rival armed camps. But a few perceived that we could not be indifferent to its outcome, and that a victory for Germany would establish for the first time in modern history a hostile nation supreme both on land and on sea. This would inevitably bring the Germans into British possessions in the New World and thus threaten the vital interests of the United States. Moreover, Wilson soon realized that it was one thing to proclaim *neutrality* and quite another to defend the *rights of neutrals* in a world at war. German submarine warfare brought us at last into the struggle. Outraged at Germany's international behavior, Wilson asserted: "The world must be made safe for democracy."

But Wilson soon had a more important war aim: a league of nations "for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike." Although the Covenant of the League of Nations was written into the treaty that ended the war—the Treaty of Versailles—the Senate refused to ratify it without reservations which Wilson considered to be too crippling to accept. Thus, with world-wide commitments and interests, and in spite of the lesson of the war just ended, the United States refused to adopt a policy which would connect it formally with the League of Nations.

Substitutes for membership in the League were devised—and they proved to be inadequate. To defend our interests in the Orient, we fostered a series of treaties at the Washington Arms Conference in 1921-1922; to defend the peace in Europe, we negotiated with France the Pact of

Paris of 1928 (later accepted by many other nations), which outlawed war "as an instrument of national policy."

Although there were high hopes for both of these arrangements, neither could be adequate in the face of a determined aggressor. This was clearly shown after 1931 when Japan first, and then Italy and Germany, callously disregarded their international obligations and indulged in unrestrained aggression. But it was not until the spring of 1940 when, one after another, the countries of western Europe were being trampled, that the great majority of Americans came to recognize the extent to which the United States was imperilled by attempting to stand alone in the world.

Puzzled Americans

Many Americans today are confused about the policies we pursue abroad. On the one hand there is solemn talk of bipartisanship in foreign policy, and on the other there is public debate between the major parties and, sometimes, within the parties, over whether or not we are on the right track.

The question of who should make foreign policy is an old one—as old as the Constitution. It arose for the first time in the Constitutional Convention. Pierce Butler of South Carolina insisted among his fellow-delegates that the power to declare war should reside in the President. The President, Butler said, could be expected to possess the qualities of mind required to reach correct decisions, and could be counted on never to make war unless public sentiment supported it. Butler's colleague, Elbridge Gerry of Massachusetts, was appalled. Gerry asserted that he had "never expected to hear in a republic, a motion to empower the executive alone to declare war."

The Constitution itself finally provided for Congress to have the exclusive right to declare war. But as time passed, the power over peace and war—like the power over all foreign policy-making—came to be in the province of the President. It had early become apparent that while the legislative branch may be presumed to represent the people more directly than the President does, its proceedings are slow, and it is not continuously in session. Of course, Congress could today be assembled in less than a week, but unhappily the developments in military technology have made even "less than a week" an intolerably long time. So, just as the case has been since the start of our history, the executive branch dominates the formulation of our foreign policies.

In practice, therefore, the President may involve us in obligations—even war—re-

gardless of the wishes of Congress. There are numerous illustrations: James K. Polk created the situation that led to the conflict with Mexico in 1846; Wilson sent General Pershing against Pancho Villa in 1916 under circumstances that could easily have led to more widespread fighting; and Harry S. Truman, in ordering troops to Korea in 1950, presented Congress with a *fait accompli*.

Of course, Congress may withhold funds for the conduct of hostilities it does not approve of. But this is usually impractical: once war has broken out and the enemy is engaged in battle, it would be unthinkable. Presidents have almost invariably avoided outright defiance of Congress on questions of foreign policy—although there was the occasion in 1908 when Theodore Roosevelt sent the fleet around the world against the wishes of leaders on Capitol Hill. He asserted simply that as commander-in-chief he could order the fleet to the Pacific and that if Congress did not appropriate the necessary funds to bring it back, there it would remain. Congress complied.

In exercising their enormous power in the field of foreign affairs, the Presidents have relied heavily upon their secretaries of state. The secretaries, therefore, long worked under the mantle of Presidential protection, which gave them a prestige not enjoyed by any other member of the cabinet. This prestige was enhanced by other factors: first, the Secretary of State is the senior member of the Cabinet; second, for a considerable part of our history, the Secretary of State stood next in line of succession to the President and the Vice President; third, the Secretary was the single figure in the executive branch (with some notable exceptions) who seemed to stand above the fray of domestic politics; fourth, working often in secrecy, the Secretary until recently was usually spared the brickbats of his fellow-citizens.

Today, the amount of specialized knowledge required for the conduct of foreign affairs makes it inevitable that the part for the Secretary of State to play will grow. While the president must continue to be the voice for the country's foreign policy, the Secretary will be his lightning rod, drawing the fire of critics away from the chief. This was Dean Acheson's role as Truman's Secretary; it has been John Foster Dulles' under Dwight D. Eisenhower; it will be the role our next Secretary of State will have, too—regardless of his party.

Although the Secretaries have now become the experts, the place of Congress in making policy cannot be discounted. Consistent leadership in policy-making can rarely come from Congress, because Con-

gress is too large and too diverse. But there are times when it can declare itself boldly: in 1898 Congress was well in advance of the President in demanding a war policy; in 1948 the Vandenberg Resolution put the Senate on record ahead of the executive in favor of taking the steps that led to the North Atlantic Treaty the following year; in 1918-1919 a group of determined Senators, led by Henry Cabot Lodge of Massachusetts and William E. Borah of Idaho, blocked the ratification of the Treaty of Versailles which would have made us members of the League of Nations.

The public itself cannot participate directly in the shaping of foreign policy: the time factor is often critical, and sometimes expert knowledge is required that cannot be disseminated for reasons of national security. The negotiations conducted by the Department of State with the Vichy French regime during the Second World War provide an excellent illustration. There was widespread public disapproval of the relationship the United States maintained with the government of France, which many considered to be a puppet of the Nazis; nevertheless, the negotiations we conducted made it possible for Anglo-American troops to land unopposed in North Africa. The irritating secrecy was

thus later justified by the military results attained.

It appears unlikely that we shall ever discover an ideal arrangement for using the special contributions that the executive, the legislature, and the public can make in formulating foreign policy. But the subject has particular importance at present when there is unusual uncertainty—and hence dispute—over policy.

Obviously our security depends upon military strength able to match the military strength of any nation or group of nations which may challenge us. The military strength of the free world must be supplemented by non-military methods. We require once again a well-defined foreign policy. We shall need better-informed ambassadors abroad than in the past; we shall need representatives abroad who can deal easily in the language of the peoples into whose countries they come; we shall need higher salaries for our foreign service officers in order to attract to the foreign field men and women of high talent. Above all, we shall need a better-educated citizenry able to bear courageously and calmly the agonies and irritations of "cold war," and who have confidence not only in democratic institutions, but also in themselves to meet the needs and demands of foreign policy.

By

ALEXANDER DALLIN,

Associate Professor of International Relations, Russian Institute, Columbia University

THE emergence of Russia as one of the two super-powers has been one of the outstanding developments of world affairs. In terms of its background, the growth of Russia's power and influence has surprised many Western observers. Some analysts still speak of it as a fear-ridden, ill-managed hotbed of discontent. Others describe it as a successful and efficient machine. It is in fact a country of contradictions, with strengths as well as weaknesses, some of which are difficult to detect and estimate because of restrictions on the flow of information imposed by the Soviet regime.

What we call Russia is officially the Soviet Union, or, more correctly, the Union of Soviet Socialist Republics. Technically it has a federal structure (the Union consisting of fifteen Republics) and elective organs of government. In reality, it is a

totalitarian system, ruled by a combination of persuasion and compulsion through a complex system of formal and informal controls. The gap between constitutional fiction and political fact is important to bear in mind in examining the Soviet system.

The leaders—and their followers—profess to be dedicated to working for a system that will bring abundance and happiness for all useful members of society; they claim to represent the popular will. Yet the essence of the system, as evolved over the past forty years, has been ruthless and arbitrary rule. From the top of a political pyramid, a small group—usually a single dictator—has controlled not only the conventional arms of government and the entire economy, not only the army, police, churches, and labor unions, but also all forms of cultural life, education,

and often even family life and leisure time. The key feature of the Soviet system has been complete dictation from above and suppression of all expression of spontaneity from below.

To say that the regime is arbitrary in disregarding the popular will is not to suggest that it is the product of wiles and impulses alone (though under Stalin and perhaps Khrushchev, too, these may play some part in determining policy). The regime is committed to a very specific ideology, which both justifies and guides its actions. At the same time, there are forces (both inside and outside the country) which circumscribe what the system can do. Some of these are immutable historical and geographic realities; others, such as popular will and foreign attitudes, the Soviet leadership can and does try to mold and alter.

The Tsarist Heritage

Over the centuries, Russia has expanded through conquest, pioneering, negotiation, and inheritance from a small principality centered around Moscow, into the largest contiguous land mass under a single government. By the time the United States had grown to its present size, and the European powers had carved up most of Asia and Africa, the Russian empire had advanced across Siberia, conquered a wide coastline on the Pacific, and annexed the Caucasus and Central Asia as far south as the borders of Iran, Afghanistan, and China.

Here was a multinational empire, with some peoples annexed voluntarily and others absorbed by force. The so-called Great Russians represent a little more than half the total population; the other Slavic nationalities—Ukrainians and Byelo-Russians [White Russians]—are next in number, though until the last century they were without a pronounced sense of national consciousness. More than 150 other nationalities populate the rest of the country.

Until the twentieth century, it was a country rich in manpower and resources but backward in many respects. A thin layer of more or less cultured landowners and gentry, and an "intelligentsia" including outstanding writers and artists (like Tolstoy, Dostoyevsky, and Tschalkowsky) generally stood apart from the mass of the people, most of whom were peasants who until 1861 had been illiterate serfs and were leading a bitter struggle for survival. This gap in wealth and mutual understanding was equaled only by the gap between the potential of Russia's resources and her failure to develop them. In some measure, these failings were due to the

stagnant system of Tsarist autocracy, which left a legacy of strong central power, the right and duty of the state to guide the destinies of its subjects, and the absence of free political life.

Toward the end of the nineteenth century, economic development and industrialization were stepped up; labor as a social class and as a movement began to grow; the peasants increasingly pressed for the improvement of their lot; "land and freedom" became a widespread cry. Social changes, combined with intellectual ferment, gave rise to political demands. But the rigidity of Tsarist rule doomed reform movements to failure, and invited the other extreme as the most likely alternative to Tsarism: revolution and terror. An abortive revolution in 1905 succeeded in forcing the Tsar to grant a limited constitutionalism. In the following years, however, these gains were whittled down. No thorough-going reform took place, and the First World War saw Russia in the throes of severe dislocations, heavy losses, and economic distress. War-weariness and the incompetence and isolation of the rulers produced a crisis of confidence, which in March, 1917, led to the abdication of Nicholas II. The end of the Romanov dynasty ushered in a Provisional Government representing various parties, largely democratic and moderate.

The new regime, striving to be responsive to conflicting popular demands in the midst of an onerous war, was faced with the emergence of the Bolshevik Party—which in the spring of 1917 had fewer than 25,000 members and whose leaders were almost all in exile or abroad. With simple slogans promising all things to all men—"land, peace, bread"—and under the determined leadership of Vladimir Lenin, it became the major challenge to the Provisional Government. After several crises, power (as Lenin put it) "lay in the streets," and the Bolsheviks through a coup on November 7, 1917, ousted the Provisional Government and proclaimed themselves masters of Russia. The democratically-elected Constituent Assembly, with a clear anti-Communist majority, was forcibly dispersed in January, 1918. The "soviets"—originally councils of workers, peasants, and soldiers, which had been non-Communist at the outset of the Revolution—had become largely Bolshevik-controlled; they gave their name to the new, "Soviet" regime.

Communist Ideology

"Bolsheviks" (Majority Men) is the name Lenin gave to his faction of the Russian Social-Democratic movement when in 1903 they prevailed within the party over the

"Mensheviks" (Minority Men) in a fight over the nature and organization of the party. Lenin, then and later, stood for a strongly disciplined, army-like, elite party of professional revolutionaries. In this, as in other respects, he had pushed to an extreme some of the notions formulated by Karl Marx and Friedrich Engels in the years after 1848.

Bolshevism (or communism) is the combination of an irrational faith in a historical mission with a rational attempt at social engineering: the transformation of society—and man—in accordance with a preconceived plan and understanding of the universe. With only minor alterations, the present Soviet leadership remains wedded to "Marxism-Leninism," as it is called; and even though the tenets are at times neglected or twisted, the impact of ideology on the Kremlin's view of the world—and its actions—is far greater than Americans are accustomed to believe.

The basis of Marxism is *dialectical materialism*. It postulates that the progress of mankind takes place through a chain of conflicts; in each of its links the struggle between two opposites (new and old, or good and bad, or rich and poor) eventually leads to a new synthesis, which in turn generates its opposite, and so forth. It assumes that material factors are the determinants of social relations; and that the mode of production, or the type of economic system, at any stage is the decisive "base," which determines the nature of the "superstructure" of morals, values, and culture. This inevitable process, Marxists hold, explains the progression of mankind from one stage to the next higher—from primitive to feudal society, from feudalism to capitalism, and on to communism. But while in each hitherto-known system the conflict was expressed in terms of economic classes (the exploiters and the exploited), after overthrowing capitalism and the capitalists, labor will bring an end to the dialectical process: class struggle will end, and a classless society of equals will emerge. The ideology thus provides an analysis of history as well as a road map to communism.

For Lenin, political and civil rights were part of the transient "superstructure" of capitalist society, not self-evident or natural rights; morality, humanitarianism, and laws were all transitory phenomena of the present but not necessarily of the future social order. Lenin focused stubbornly on the "dictatorship of the proletariat" as the necessary first phase after the seizure of power, and on the Communist Party as the self-appointed "vanguard" of the toiling masses, whose interests it represented regardless of whether these masses had reached sufficient political maturity and sagacity to agree or not.

Thus the vision the Communists have held out—and a powerful vision it has been—is that of a classless society, in which "exploitation of man by man" is abolished, and the state (defined as an instrument of oppression wielded by the ruling class) must wither away. Society, having abolished private property by nationalizing it, regulates production and distribution by the formula, "From each according to his ability, to each according to his needs." It will be well to ask to what extent, if at all, Soviet practice has led to an approximation of these objectives.

The tenacity and the content of the doctrine make for a unique continuity of goals, along with a maximum of flexibility in the means of attaining them. The end explicitly justifies the means. Even in Khrushchev's "public-relations"-conscious reformulations, the inevitable victory of communism throughout the world remains; and while there may be instances (Moscow now maintains) where communism can come to power by constitutional means, the use of violence remains condoned wherever it furthers the cause.

Lenin, Stalin, Khrushchev

Leon Trotsky, Joseph Stalin's major rival for power after Lenin's death in 1924, once predicted that the Communist Party would usurp the place of the masses; that its leadership would displace the rank and file; and that a dictator would finally discard the party leadership as well. The Soviet experience has nicely illustrated the dominant role of the party as well as the emergence of one-man rule. Paradoxically, as the caliber of the leader (Lenin, Stalin and, after some struggle, Khrushchev) has successively declined, the power of the Soviet state has grown.

After a bitter struggle for survival against domestic and foreign foes, Lenin in 1921 called a temporary halt to the forced march toward communism. With political power consolidated within the new borders of Soviet Russia, "War Communism" was replaced by the "New Economic Policy" (N.E.P.), meant to be a prolonged breathing spell to permit economic recovery and reconstruction after years of crisis and famine. Yet, while the spirit of compulsive breakneck transformation relaxed, the one-party system was never permitted to weaken.

In the struggle for the mantle of Lenin, who died January 21, 1924, Stalin skillfully outmaneuvered both the moderate ("right") and the purist ("left") wings of the party. His victory was achieved largely through shifting, unprincipled alliances, first with one group, then with another,

while maintaining his hold over the organizational weapon: the party machine. Trotsky and other opposition leaders were exiled in 1927.

By 1929, Stalin's dictatorial control had been secured. At the same time, the N.E.P. came to an end, and a new militancy was injected in industry, agriculture, and foreign policy. The following decade, down to the outbreak of World War II, witnessed the blossoming of totalitarianism, with party controls extended over economy, bureaucracy, army, police, and intellectual life. All dissenters were branded as deviationists or "enemies of the people." This process culminated in an orgy of treason trials and the so-called Great Purges of 1936-38, which the Communists themselves now recognize to have cost the lives of many thousands of innocents—including the majority of "old Bolshevik" and Red Army leaders, along with numerous non-Communists.

At the same time, a "second revolution" was begun. It was marked by the introduction of the Five-Year Plans, forced industrialization, and collectivization of agriculture, all of which required tremendous exertion, force, and casualties. By 1936 Moscow could claim that all hostile classes had been liquidated and that the Soviet Union had achieved "socialism." (In communist parlance, "socialism" is but the "lower," imperfect stage on the road to the "higher" communist paradise.)

By 1939 Soviet Russia appeared to the world as an inscrutable, industrializing, arming, "maturing" state, which had suffered inestimable losses and which had also retreated from some of the naive expectations of its early years. Clearly, the Communist millennium was not around the corner. Neither state and law nor even crime were about to wither, as had been hoped. The original stress on equality in wages and opportunity, lack of discipline in education, scorn on family life were all abandoned as all resources were being harnessed for a centrally-directed, strenuous effort to build up the state and the economy.

World War II interrupted and rechanneled these drives into a gigantic exertion: first, to stem the German onslaught (June, 1941-December, 1942) and then, to strike back and pursue the invading troops to Berlin (January, 1943-May, 1945). In the course of the war the Soviet leadership considerably relaxed its stress on communism, in an effort to create a sense of broader national unity. But the loosening (like so many before and after) proved to be temporary. Soon after the war it yielded to a return to a "tough" policy. Its expression in foreign policy was the "cold war." In domestic life, it was marked

by the renewed insistence on Communist purity, anti-Western intolerance, dictation in arts and sciences, and a new round of greater conformity, tighter work discipline, and higher performance in economic life as well.

Beneath the surface, these years (1947-53) witnessed a renewal of bitter struggles within the Soviet leadership; a new peak of totalitarian rigidity and extremism; and the ludicrous adulation of Stalin himself. A new crisis and a new round of purges seemed to be imminent on the eve of Stalin's death (March 5, 1953); urgent problems remained unattended; and even his highest disciples feared new orgies of "unwarranted" terror.

U.S.S.R. in Transition

Since Stalin's death, the Soviet Union has been in a process of readjustment. The rulers and the ruled seem to have agreed on the need for some, and in many ways important, changes. What these were and who was to carry them out remained in dispute. The past five years have been marked by a contest for power at the top, and a number of reversals of policy at home and abroad. Most important, perhaps, have been (1) the maintenance of the basic communist objectives and outlook of the leadership; (2) the attempt to make government and economy more efficient and "rational"; and (3) the restriction of the machinery and atmosphere of terror—a process which has led to the emergence, perhaps for the first time since 1920, of a meaningful "public opinion."

Among the benchmarks of the post-Stalin era have been the successive elimination of his "heirs"—Beria, Molotov, Kaganovich, and Malenkov being the foremost. A more liberal course appeared to be indicated by the secret but well-publicized downgrading of Stalin by Khrushchev at the Twentieth Congress of the Communist Party in February, 1956; the so-called "thaw" in intellectual life; and some efforts at relaxing international tensions. But a new though incomplete return to a tougher course was made in the wake of the events of October, 1956, in Poland and Hungary and their echoes in the U.S.S.R.

By and large, the changes in domestic and foreign policy introduced since 1954 have shown considerable imagination, dynamism, and flexibility. The basic structure of power, the form and fiction of controls, and the nature of tensions in Soviet society have remained substantially unchanged. The most important feature of the present period may well be that, unlike the latter years of stifling Stalinism, the entire system has again come into motion. Policies and personalities are changing,

and the myth of Stalinist infallibility has been shattered once and for all. It is useful to think of the major problems, as the Kremlin faces them, as difficulties which have been with the Soviet regime for years but which today require attention and resolution with particular urgency and daring.

Government: Form and Fiction

Leadership, Stalin once remarked, is "the ability to convince the masses that the Party's policy is right." In its broadest sense, the task of propaganda is to dispel doubts, secure voluntary compliance, and keep up the spirit of urgency and participation. The Kremlin seeks to secure fullest allegiance not only through the network of many thousand propagandists and through the interminable reiteration of stock phrases and slogans in all media—from elementary schools to television. It also strives to buttress the sense of identification by an extensive edifice of pseudo-democratic trappings, which conceal more often than they reveal the genuine nature of Soviet power.

Formally, the Constitution of 1936, as amended, includes a bill of rights (with the right to work, education, social security, and leisure, and equality regardless of nationality, sex, and social origin). It pledges inviolability of person and home, and it provides for elective and presumably responsible organs of government. The equivalent of a parliament is the Supreme Soviet of the U.S.S.R., a bicameral legislature elected every four years by general, direct, and secret ballot. One chamber, the Council of the Union, consists of deputies elected on the basis of territorial districts (with one electoral district for approximately 300,000 inhabitants). The other, the Council of Nationalities, assures representation according to the constitutional status and approximate size of each national group (from twenty-five deputies for each of the largest, down to one for each of the smallest administrative units based on nationality).

This elaborate system is in fact meaningless. Formally the final repository of authority, the Supreme Soviet, in actuality is a rubber stamp which always acts unanimously. The deputies are picked in advance of election so as to include some known figures—writers, generals, chess players, fliers—and also a few dairy maids and unskilled workers. About nine out of ten deputies are members of the Communist Party. The elections themselves, without opposition candidates, are a mere formality, with over 99% "voting" for the official slate.

When the Supreme Soviet is not in session (which is true most of the time), its

Presidium (elected by it) has full authority to issue decrees, which later are retroactively approved by the two chambers. The chairman of the Presidium is the head of state, a powerless figurehead; at present he is Marshal Kliment Voroshilov.

The Supreme Soviet elects the Supreme Court and the Procurator-General (a chief prosecutor with considerable powers), and confirms the Council of Ministers, which is the cabinet of the federal government. This Council (until 1946 known as the Council of People's Commissars) is headed by a chairman (Premier). Stalin did not bother to assume the Premiership until 1941 (though he had complete control of the government long before); he passed it on to Georgi Malenkov, who, upon his resignation in February, 1955, was succeeded by Nikolai Bulganin; in March, 1958, Nikita Khrushchev in turn succeeded him in this position. In each instance control of the party (Stalin, Khrushchev) preceded control of the government machine; control of the latter without the former (Molotov, Malenkov, Bulganin) has been tantamount to impotence.

In regard to the structure of government, the Khrushchev era has seen two moves of significance. One has been the shift of some functions from ministries to a variety of government "committees" directly subordinate to the chairman of the council of ministers; the prime example of this is the substitution of the Committee of State Security (KGB) for the previously full-fledged Ministry of State Security (MGB) after the purge of Beria and associates. The other has been the administrative decentralization initiated in 1956-57. There was a widespread feeling in Moscow that the top-heavy over-centralization of the Stalin period was stifling initiative, that efficiency demanded some diminution in the direct controls of the central government, and that regional and national units felt their state rights trampled on. It is likely that decentralization was one of the several issues in the conflict among the Soviet leaders in 1957.

In actuality, the administrative changes involving the shift of some responsibility away from Moscow, do not seem to have influenced output significantly, nor to have reduced the effective control of the party; if anything, party control is more direct when it does not have to vie with the central state bureaucracy. For it is the party—or, more correctly, its leadership—that holds the reins of power.

The Communist Party

Real power resides in the Communist Party of the Soviet Union (CPSU), recognized by the constitution as the vanguard of the masses and endowed with

authority which has permitted it to emerge victorious from every real or potential challenge in the past forty years. Khrushchev's victory, like Stalin's a generation earlier, is the victory of the party machine, and Moscow openly states that the role of the party will continue to increase, while "administrative and repressive" functions (state bureaucracy, army, and police) will "lose their former role" in the Soviet state.

The Bolshevik Party has grown from a membership of some 300,000 in 1918 and 1,900,000 in 1938 (after extensive purges), to nearly 8,000,000 today. It is still a select group, thoroughly screened, and subject to special obligations but also special privileges. As a group, it is the defender of the revolutionary order, a model for all to emulate, and the holder of political monopoly. While state, economic, and other institutions may be decentralized and reorganized time and again, the Party has retained—and, it is safe to say, will retain—its highly centralized, disciplined character as a matter of principle and of expediency.

The party organization has spawned almost half a million cells ("primary party organizations"), which exist in virtually all factories, farms, and government offices. Operating as essential "transmission belts," they are responsible to district (county) committees, which in turn are under the direction of regional (provincial) committees, with the lower officials in each instance named or approved from above. The higher strata are represented by party organizations on the level of each Union Republic and finally, at the top, the All-Union leadership.

Formally, infrequent Party Congresses are supreme in determining strategy and electing the Central Committee, which is the most powerful single body in the country. It is composed of about 150 members and "candidate" members picked to "guide the entire work of the party" and "direct the work of Soviet organs." Under Stalin the Central Committee atrophied and became as much of a fiction as did other institutions; under Malenkov it continued its ineffective existence. Khrushchev, on the other hand, appears to have "packed" it and restored it as a key instrument of government.

The importance of the Central Committee is enhanced by the fact that it directs a variety of staff departments, such as the Agitprop (responsible for "agitation and propaganda"), the Military Department in charge of political control and indoctrination in the armed forces), the Foreign Department (which, since the dissolution of the Communist International in 1943, is responsible for contacts with Communist Parties abroad), the so-called

Cadre Department (which has the crucial say-so on personnel selection and promotion), and the supervision of the tens of thousands of party schools throughout the country.

The Central Committee meets in plenary session only about two or three times a year. In the interim, much of the actual work is carried on (in addition to the staff departments just described) by its Secretariat and the party Presidium (until 1952 known as the Politburo). The role of the Secretariat is suggested by the fact that Stalin was Secretary-General of the party during his rise to power, and Nikita Khrushchev, too, used the similar post of First Secretary of the party (which he gained in September, 1953) as the springboard to dictatorship.

When Stalin's heirs resolved to broaden the base of control, they had in mind a return from the dictator's one-man rule to "collective leadership" within the Presidium, a body of about fifteen members. It is here that struggles within the ruling elite can most easily be detected. It is the Presidium's members who constitute the real "interlocking directorate" by simultaneously holding key ministries or positions in the army and in economic life. This fusion of party and state functions was temporarily suspended during the struggle for Stalin's succession, but by 1958 the "collective leadership" had itself become a sham, and Khrushchev added the Premiership to his earlier control of the party.

Differences among the Presidium's members have probably existed at all times. It appears that Khrushchev had to appeal to the somewhat broader Central Committee (which he had "packed") for support against his opponents in the Presidium in the struggle which, in June 1957, led to the ouster of Georgi Malenkov, Viacheslav Molotov, and Lazar Kaganovich from the Presidium. Personality and organizational differences were superimposed on policy differences among the leaders. Molotov stood for a Stalinist course which would have continued most elements of terror, compulsion and "cold war"—either as a matter of principle or because he feared that any relaxation was dangerous. Malenkov stood for a series of cautious but real changes which might have carried the U.S.S.R. further away from the Stalinist model in the direction of greater emphasis on consumer demands and perhaps a corresponding foreign policy of retrenchment.

Khrushchev, occupying a middle ground, succeeding in ousting his rivals (as Stalin had) thanks to his control of the party apparatus. It would be naive to assume that such rivalries can be stamped out once and for all. The system itself gener-

ates new conflicts which, in the absence of free public opinion, must be expressed within the leading bodies such as the Central Committee and Presidium.

There is at present no obvious leader, cause, or organization around which anti-Khrushchev elements could rally. While the nature of controls is much as it was in Stalin's days, a new leadership and a new generation are rapidly taking over the reins of the party. Of all the men who have sat on the Politburo since 1919, there are only two in power today (in addition to Voroshilov, who is without genuine influence): Khrushchev and his first deputy, Anastas Mikoyan. All others are relative newcomers—most often not revolutionaries but technicians and bureaucrats.

The party itself has been transformed from a conspiratorial into a mass movement; from the master of a "proletarian" to the manager of a bureaucratic dictatorship; from the locus of idealism to a "gigantic club of time-servers." Yet it would be a mistake to look on the party as only a creature of the leaders' will. If only because virtually all Soviet officials and intellectuals, all men of real or potential influence are in the party, it is, also the arena of (often muted) debates and differences. Much of the ferment of recent years has centered in party circles, and virtually all spokesmen for unorthodox ideas have been party members—or, in the case of some of the student leaders, members of the party's youth affiliate, the Komsomol (Young Communist League). It is important not to look upon the party leadership or the party membership as a homogeneous, undifferentiated mass.

Police and Terror

In the view of many, the extensive and systematic use of terror is the greatest indictment of Soviet totalitarianism. It is an index to the sense of insecurity of, and the lack of full allegiance to, the regime. In Bolshevik theory, all government is force, and terror as "the sword of the revolution" is a necessary and legitimate instrument of power so long as enemies remain within and without. Terror is also the counterpart to propaganda: where persuasion fails, there remains the ever-present threat—both the "eyes and ears" of the regime and its blackjack.

The so-called Extraordinary Commission (Cheka) established in December, 1917, was the first of several Soviet agencies created to enforce "revolutionary justice" without due process of law. Soon it was made a permanent part of the Commissariat of Internal Affairs (NKVD) as the GPU. It was extensively used against "enemies"

within the party, against remnants of anti-communist movements, and wholesale against recalcitrant peasants who opposed collectivization. In the 1930's the NKVD greatly strengthened the repressive machinery, expanded the secret police and system of informers, took charge of the rapidly growing network of forced labor camps as well as border guards and "troops of the interior." It thus emerged as dreaded "state within the state." Its power continued unchecked, and the reign of terror, particularly intense between September, 1937, and July, 1938, has remained a ghastly experience in the memory of all who survived it.

Inevitably the operation of the NKVD (since 1946, the MVD, or Ministry of Internal Affairs, and the MGB, or Ministry of State Security) aroused opposition not only among the voiceless masses, but also among the army leadership, managers, intellectuals, and party brass. While the details are still obscure, it is clear that the chief (from 1939 to 1953), Lavrenti Beria, was at the center of bitter struggles at the end of Stalin's life and in the months thereafter. His arrest and execution (June and December, 1953, respectively) were only the most dramatic moves in the concerted effort of other Soviet leaders to eliminate the secret police machinery as an independent force whose power and abuse they feared. Now headed by Ivan Serov, the Committee of State Security is directly responsible to Khrushchev. Although it supervises substantially the same organization, it is unmistakable that the operations of the police machine have been subjected to the same "rationalization" that has recently characterized other areas of Soviet public life.

Most important have been the reduction in the atmosphere of terror in everyday life and the extensive amnesties of inmates of forced-labor camps. If official figures can be trusted (and there is some evidence that at least their general magnitude is credible), nearly three-quarters of all concentration camps, which had held literally millions, have been dismantled since Stalin's death. In the remaining camps (released inmates confirm), the previously abominable conditions have improved in regard to food, housing, and general treatment. Revolts in the Vorkuta and Karaganda camps in 1953 may have contributed to this change of policy. Measures introduced in 1957-58 aimed at having forced labor sentences served within the geographic area of the convicting court and at giving each community authority to oust from its midst "anti-social elements" as it sees fit.

While these latter moves are still in state of flux (the new criminal code has

likewise been under revision for several years), the easing of terror is exemplified by the abolition of the Special Board of the MVD, which since 1934 had had authority to pass secret sentence without normal charges, trial, or counsel. Acknowledgment of extensive abuses in the Stalin era, release of many former "offenders," and recent insistence in Soviet journals and pronouncements on the need for "legality" are welcome developments for those in Soviet society who look for some stability, routine, and order.

Nonetheless, terror remains as a powerful threat, and the leadership is prepared to use it. It has been argued persuasively that the Soviet system cannot dispense with it, regardless of who is at the top.

The Armed Forces

The other institution of "raw force" in the Soviet Union is the military. The Red Army was created in the early days of civil war and foreign intervention (1918-20) as the defender of the new order. From the outset the political leadership determined to inject special checks into the armed forces, partly because it feared the emergence of a popular general who might challenge the revolutionary leadership—the specter of "Bonapartism"—and partly because of the Communist desire to indoctrinate and control all its subjects, especially those who carry arms.

The chief instrument of control has been the political commissar, at times called deputy commander for political affairs. The commissar, a party man, has been a permanent fixture at each echelon of the Soviet armed forces. The contest between the latter and the party has manifested itself in the alternation between unity of command (in which the military commander was superior to the commissar) and the co-equality of authority between commander and commissar. Other channels of political control have been the system of party and Komsomol cells in the armed forces, a network of political informers, and the so-called "OO" (Special Sections) reporting to the MVD.

On the whole, the military have ranked high in prestige and rewards in Soviet society. In spite of this—or perhaps because of this—the military leadership has been heavily hit by purges, such as the execution of Marshal Tukhachevsky and other top commanders in 1937, now acknowledged to have been based on phony charges. The eclipse of the popular Marshal Georgi Zhukov and the armed forces, in general, as a political factor during the postwar years was indicative of the party's assertion of supremacy. Stalin's death

returned the army leaders to greater influence. Zhukov was the first military man to join the party Presidium and become minister of defense. However, the attempt of the marshal to reduce the power of the party-run Chief Political Administration in the armed forces was a major cause of his ouster in November, 1957. The party machine cannot tolerate autonomy of the armed forces any more than from any other segment of Soviet life. Indeed, so long as all key commanders are party men and so long as party discipline remains strong, the army dictator is an unlikely prospect on the Soviet scene.

Arts and Sciences

The Soviet regime has exerted great effort to expand educational and cultural facilities and services. While it is uneven in quality and greatly biased in some fields, the ten-year public school—which increasingly becomes the norm for Soviet citizens—offers a fairly solid foundation of learning, particularly for the training of specialists in the industrial society which the U.S.S.R. has become. Higher education and a wide-flung network of technical and adult-education courses add to the opportunities for learning open to most Soviet citizens. Some branches of arts and sciences have received generous state support, and Soviet successes in opera and ballet, nuclear weapons, and space satellites indicate that such selective concentration on desired fields of priority can yield spectacular results.

While the Soviet scientist and technologist can operate with relative freedom, the creative artist—the writer, the painter, the composer—and especially the historian and political scientist have been subjected to severe dictation of what may and what may not be said and done. The party "decrees" on various occasions what is good music (and the proscribed works are no longer performed), what is good history (and the condemned theories and books vanish, at times along with their authors), what is good literature or criticism or theory of language.

Such thought control cannot but be abhorrent to all but the opportunists among Soviet scholars and artists. Even if they have enjoyed material advantages and considerable prestige, writers, artists, and scholars were inevitably in the forefront of those pressing, after Stalin's death, for a relaxation of intellectual controls. The resulting "thaw," however limited, has seen the first significant and perhaps irreversible return to some creative freedom and the expression of some unorthodox ideas.

The new latitude was used by some to an extent clearly unwelcome to the Krem-

lin. And, in 1957-58, government policy moved against the non-conformists among the Soviet intelligentsia to keep the "thaw" from becoming a "flood." In mid-1957 Khrushchev formalized the tightening by reaffirming the imperative of "party-ness" (i.e., strict conformity with political directives issued by the Kremlin) in matters of arts and science. Political controls over intellectual life must remain. As a result in 1958 things were a far cry from conditions of creative and academic freedom, though they were markedly better than before Stalin's death. As in other areas of Soviet life, the rulers are caught between the desire to encourage creativity and devotion by relaxing the stifling controls, and the fear that by doing so they will unleash forces that may prove their undoing.

The Soviet Economy

Probably the greatest lasting accomplishment of the past forty years is the forced economic growth of the Soviet Union from a relatively backward state to a leader in many branches of economy, second only to the United States. This growth in some fields has been accomplished through tremendous exertion and privation and at a high cost; it has meant the neglect of other areas of the economy, and often of welfare and consumer demands. Economic development is basic to both Marxist thinking and Soviet experience. State ownership of the means of production and total direction of the economy are axiomatic. Indeed, nationalization (without compensation) of industry and land were among the first steps of the revolutionary government. For a decade, under the N.E.P., it tolerated—in the interests of rapid reconstruction and because it was relatively weak—a "private sector" while holding fast to the so-called "commanding heights" of the economy. In the past generation, virtually all economic activity has been non-private and closely directed from above.

After early efforts at partial economic planning (e.g., in electrification), total planning set in with the Five-Year Plans initiated in 1928. These have attempted to cope with economic and administrative problems of staggering complexity in setting goals, determining priorities in production, allocation, and regional distribution, as well as in supervising and improving performance, management, and distribution. The planning machinery has centered in the State Committee(s) for Planning (Gosplan), attached to the Council of Ministers.

In this giant effort the major emphasis has been on expansion of heavy industry, armaments, and machine-tool production

(as the basis for further growth). "Catching up with and surpassing" the West—especially the American, economy has been an explicit goal. In the drive for its attainment, a variety of devices have been used—incentives, emulation, extra rewards—severe labor discipline, pooling of effort; at critical points, along with manipulation of taxes, subsidies, allocation of equipment, and controlled investment pool. Not only has the rate of investment (in terms of its share of the total national product) been substantially higher than is normal under a market economy, but out of the resources invested, roughly half (or, twice as much as in the United States) has gone into industry—particularly heavy industry—and strikingly little into services and consumer goods.

Soviet policy-makers have recently reaffirmed their continued emphasis on heavy industry. At the same time they assert that the combination of industrialization, electrification, automation, and nuclear power can remedy the past neglect of the consumer sector. This analysis may be at least partially accurate, since the phenomenal rate of growth in heavy industry (about 15% annually) is beginning to slow down, and total capacity has reached a point where marginal productivity in consumer goods can easily be high and easy to utilize—provided the necessary political decisions are made.

Such political decisions have been at the heart of some recent controversies in Moscow. Some of the obstacles and bottlenecks are clearly built into the economic system: waste, stifling of initiative, inefficiency, stress on quantity at the expense of quality. Though serious at times, such difficulties and others have not been disruptive in the overall picture. In addition to agriculture, two of the economic headaches faced by Stalin's heirs have been over-centralization and the low standard of living. Recent reforms have aimed at increasing efficiency and obviating discontent. Apparently a severe dispute between planning officials (i.e., political decision-makers) and economic managers took place. After a brief ascendancy of the former (December, 1956), the party machine hastily forced through an ambitious reorganization (spring, 1957) which transferred the power of most economic ministries to 105 administratively decentralized territorial units (*sovmarkhozy*, or "councils of national economy"), each subject to local (party) control. In addition to its part in the struggle for supremacy in Moscow, this reorganization may do a little, but not much, to revive initiative and make allowances for local diversities to a greater extent than heretofore.

The heavy burden imposed on the econ-

omy by military expenditures—estimated at some 15% of the annual commitment of resources—is not likely to be substantially relieved. Yet a small shift in the share devoted to heavy-industry investments could make a relatively significant difference in consumer goods. Apparently this was part of the program, or at least appeal, of the Malenkov faction in 1953-54. Its popularity is easy to understand if one bears in mind that the standard of living of the average Soviet citizen has remained dismally low. One careful study put the Soviet worker's real wage in 1950 at one-sixth of the American worker's. Since then, it is true, some improvement has taken place, but nothing so striking as the giant strides made during the same years in the production of iron and steel, the extraction of oil and coal, or the harnessing of electric and nuclear power.

The Soviet population—totaling about 205 million—grows at an annual rate of about 3,000,000. It is obvious that food, housing, and clothing, not to speak of less essential items, must be produced in increasing numbers if only to maintain the present low per capita levels. In spite of the present clear-cut priority on heavy industry (reasserted since 1955), the Soviet leadership is in various ways tackling the greatest needs in this field—by seeking to provide more food and better housing; by launching a vast campaign aimed at equaling U. S. per capita production in dairy products and meat; and especially by reorganizing agriculture.

Agriculture, the Achilles' Heel

The peasantry has been the perennial headache of Marxism and of Russia—in Tsarist as well as Soviet times. The communist ideal in agricultural organization has been the state farm—a large “rural factory” employing farm hands, just as the urban factory employs workers. Such state farms (*sovkhoz*) exist, and Khrushchev's recent effort to cultivate so-called “virgin land” in Kazakhstan and Siberia has produced an expansion of state farms to about one-fourth of the total sown area of the U.S.S.R.

The prevalent type of Soviet agricultural organization, however, is the collective farm (*kolkhoz*), conceived as a long-term compromise between communist objectives and peasant attachment to soil and property. Such a concession to peasant sentiment has been necessitated by the obvious desire to enlist peasant cooperation in procuring the much-needed food. While on state farms farm hands are paid regular wages, in the collective, after all obligations are paid, the farmers share in the income and harvest and are allowed to

possess modest private garden plots which they can work in their spare time.

Wholesale collectivization, from 1929 to 1933, took a gigantic effort and an enormous toll in human lives and sacrifice. Millions of families were uprooted or exiled; millions of heads of cattle were killed; here and there pitched battles were fought. But the state prevailed. The coincidence of collectivization with the major industrialization drive was not accidental: mechanization in agriculture was needed to release millions into the new industries; above all the peasantry was singled out to bear a major part of the burden and cost of industrialization. Finally, the cities had to be assured adequate and cheap food, largely by requiring the collective farms to make compulsory deliveries to the state at minimal prices.

By the time Stalin died, agriculture was again—or still—in a state of serious crisis. After deliveries to the state and the state-owned Machine-Tractor Stations (M.T.S.), which lent machinery to the farms against heavy payment, the residuum for *kolkhoz* members was usually low. Discontent continued to smolder, and the collectives were repeatedly branded as centers of “survivals of individualism.” Peasant hostility to compulsion and over-organization (rather than to cooperative agriculture as such) invited retribution in the form of tighter political and economic controls. Worst of all from a national point of view, harvests and livestock were woefully inadequate. The population was growing faster than the food supply, while more and more people (especially young males) were leaving the farms for the cities.

The Khrushchev era has seen a determined effort to cope with this crisis. Compulsory deliveries from the private plots were lifted; prices paid by the government for produce procured from the farms were substantially raised; and more capital has been allotted to increase the available farm equipment. At the same time, collective farms have been merged into fewer larger units (to a total of about 80,000 in 1958) for the sake of greater efficiency as well as greater political reliability. In the spring of 1958 came the drastic decision to dissolve the M.T.S. and sell the machinery to the collective farms: these centers of administrative and political control in the country-side had long been objects of *kolkhoz* hostility because of the inefficiency and “dual-bossism” which their existence involved. This is considered an important step in the direction of increasing responsibility and initiative of *kolkhoz* managers, of reducing the overhead, and of satisfying some peasant complaints.

Simultaneous efforts have been made to increase the area under cultivation, to

emulate foreign (particularly U. S.) techniques, introduce new crops, and stop the flight of manpower from the land. It is important to note that the decision has been to bolster the existence of the collectives rather than to push for their transformation to the politically-preferred state farms. This reveals the urgency of improving the situation—a sense of urgency best reflected in the decree, issued in June, 1958, to end all forced deliveries from collective farms, in a gamble by the government to increase productivity in this fashion by relating peasant interest (and income) to the size of the harvest.

These drastic measures have brought some amelioration. The grain harvests, averaging about 80 million metric tons prior to Stalin's death, have risen to about 100 million—the goal of 180 million metric tons still seems quite unrealistic. Likewise the total number of heads of cattle rose from 56 million in 1953 to over 66 million in 1958—but has not yet exceeded the level of 1928 or even 1913.

Khrushchev has staked much of his reputation on his ability to remedy the ills in agriculture, which he considers a domain of his own special competence. The results will be awaited with more than passing interest. One other device has been discussed but thus far not widely practiced: wholesale import of food from abroad. Indeed, the Soviet Union faces the paradoxical situation that, while it is still an agricultural country (55% of the population remains rural), it may find it easier to export raw materials and industrial products in return for food, than to produce enough sustenance for its own population.

Soviet Society

Forty years of Soviet experience have transformed Russia from a fairly backward country that was making rapid but highly erratic strides toward economic and political growth, into a rigidly disciplined, hierarchically organized, leading industrial society. In the process, the social structure and the aspirations and values of the people have changed.

In the official view, Soviet society consists of three groups of "toilers"—workers, peasants, and intellectuals—harmoniously cooperating as equal, non-antagonistic elements. In reality, considerable disparities exist and probably continue to grow—in income, social status, and style of living. In part, these are the intentional results of the Bolshevik upheaval; in greater part, they have proved to be the necessary by-product of building an industrial state.

A new elite has emerged. It includes top

party, government, and managerial "brass," as well as scientists, artists, and writers. Various intermediate layers of bureaucrats, lesser intellectuals, clerks, and foremen make up the social strata below them. Workers as a group rank next in the proletarian state; and peasants make up the vast bottom class of the Soviet pyramid. If it is not impossible for the top artists and officials to earn 100,000 rubles or more a year, it is also not unusual for the poor to be barely above the starvation level; this level is indicated by the fact that the minimum monthly wage was only recently raised to 270 rubles in the country-side and 300 in the city. The typical wage is probably somewhere between 600 and 1,000 rubles a month. This low level, in terms of purchasing power, is, however, somewhat offset by the greater number of wage-earners per family and by the availability of free (or low-cost) housing, education, medical services, and other features of the "welfare state."

These welfare aspects have been broadly accepted as a matter of course. Nor is there any evidence that state ownership of industry, natural resources, and transportation causes popular hostility. Many citizens have come to feel that they have a stake in the system and that they owe to it their advancement and education. Others have unwittingly absorbed much of communist doctrine and propaganda.

Yet considerable tensions remain—tensions among individuals and groups as well as tensions between rulers and ruled. Some of these exist in all societies, but they are particularly grievous under Soviet conditions because of the unique pressures which the system applies on its citizens and because the grievances cannot be expressed or resolved. Some of these problems have been the inevitable result of industrialization and education. Indeed, one may wonder whether the demands of totalitarianism can in the long run co-exist with the demands of an educated, efficient, industrialized society.

With the rise of a new generation—the second Soviet generation—the extent to which people can be manipulated and manhandled has shrunk. The regime has always had to count with passive resistance and popular grievances; as a result it has conducted—just as in foreign affairs—a policy of calculated risk, advancing at any one time only so far as it could without endangering its own hold, a zigzag policy of the carrot and the stick administered in different doses. The use of Russian nationalism, the compromise with and utilization of the Orthodox Church, the collective farm itself are only a few examples of such concessions. Yet since Stalin's death all "wings" of the new lead-

ership (including Beria, Malenkov, as well as Khrushchev) have been more sensitive to popular pressures for greater security, greater opportunity, and higher standards of living. While especially the latter desire is strongest among the lowest-paid, it is (as in other societies) the intelligentsia that has emerged as the cautious spokesman for such aspirations.

It would be an error to think of these demands as subversive or revolutionary. Overwhelmingly, those who voice (or wish to voice) them stand for changes within the framework of the existing order, accepting it as a point of departure—either because they know no other or because they cannot see any other way. Probably only a small number today favor a forcible replacement of the system in toto, and even fewer a return to the old regime.

Yet it is precisely in the last few years that the sense of the inevitable and inalterable which Stalin had sought to inculcate has been shattered by the exposure of his crimes and the practical evidence that different—and contradictory—policies can be pursued in the name of communism. The official image of a steady progression to the communist millennium, both as a magnetic vision and as an excuse for present imperfection, no longer carries the sense of conviction it once did. Many, moreover, have come to be more interested in peace, predictability, and plenty today than in hypothetical benefits to generations yet unborn—and, in a thermonuclear world, perhaps never to be born. More questions are raised—and, the Stalinist freeze once overcome, the regime has been obliged to look and listen. Behind the smooth façade of “monolithic” totalitarianism, muted struggles, considerable soul-searching, and untold mental torment go on. The processes of social, political, and economic change in the Soviet Union are by no means over.

Is This Communism?

Communist leaders can point to many accomplishments. They will explain that the many privations were necessary, that most of them hit the idle or hostile elements of society, and that the worst is now over. They will explain that Soviet Russia has traversed only the “lower” stage in the building of communism, and that the better life will come once everyone does as he is told—and once the outside world either joins in or at least leaves the Soviet orbit alone.

Is it communism, though, that the Soviet leaders have been building? Even while holding on to the essence of their ideology, they have stood their own program on its head. The revolution which

was to do away with the state and promised the “withering” of all compulsion, gave rise to the greatest Leviathan the world has known and to a shocking abuse of terror. A system that professed to create a classless society has established new privileges and gradations of prestige, property, and power that run counter to the vision of a commonwealth of equals. The proletarian revolution has been successful in—and appeals to—peasant countries. At the same time it gives birth to a comfortable middle-class mentality—with middle-class tastes and values—while in the name of the international working class it suppresses workers’ uprisings in Vorkuta, Poznan, and Budapest and assails workers’ councils in Russia, Poland, and Yugoslavia as tools of reaction. A movement that proclaimed anti-imperialism as one of its foremost planks has established its own empire by conquest and subversion, with armed forces, diplomacy, and supporters abroad all marshaled for the expansion of the Soviet orbit throughout the world.

Foreign Policy: Ends and Means

Since Lenin and his followers seized power, the Soviet state has undergone a striking growth in strength and size. Foreign policy has changed apace. In the early days of fervent faith in grass-roots revolutions throughout the world, diplomacy was scorned as a “bourgeois” tool. By 1945 Stalin had come to toast clumsily the accomplishments of Soviet diplomacy: “A good foreign policy counts for more than two or three armies at the front.” Today foreign policy is a key instrument for the advancement of Soviet objectives.

Foreign policy in the Soviet sense is not limited to diplomacy. In addition to conventional international contacts through ambassadors and ministers, Moscow has used the international network of Communist Parties and so-called front organizations as means of pressure and vehicles for the promotion of its interests. And it has viewed the peoples of the world as targets of persuasion and potential allies in the struggle against their governments.

Lenin, Stalin, and Khrushchev have amended and reinterpreted individual facets of Marxism. Increasingly they and their propagandists have made use of it to justify, after the event, policies and occurrences not foreseen and not logically reconcilable with theory. In spite of this cynical manipulation, however, the fundamentals have remained—and seem so deeply impressed on the whole way of viewing the world that they become an automatic response, a tool of analysis no longer questioned but mechanically applied. “Marxism-Leninism” imparts to the Soviet outlook continuity, unity, and consistency

which make nonsense of the frequent questions, in the West, whether "Moscow has changed its goals."

This outlook includes not only the belief that communism reveals the scientific truth but more specifically that the course of history will inevitably bring about the world-wide triumph of communism over capitalism. Human action can help this process along, and it is here that tactical shifts are essential. As Lenin said, "One must combine with the greatest fidelity to the idea of communism the capacity to enter into all necessary, practical compromises." Thus, while the ideology helps us understand long-range aspirations, it cannot be used to predict short-term moves, which are based largely on tactical estimates of practical political opportunities.

In this light, the notorious zigzags of Soviet conduct are but necessary and passing deflections from a consistent line. The same "dialectical" view that explains history in terms of the class struggle sees the world conflict as a geographic projection of this contest between two inevitably hostile camps. In this struggle between opposite poles, the interests of the working class (in Moscow's terminology) are equated with the Communist Party which claims to represent them, and the Soviet state becomes the embodiment of these interests.

Revolution on the Installment Plan

In 1917 Soviet leaders had expected communist revolutions elsewhere in the world to erupt and succeed promptly. But the following years proved to be bitterly disappointing, and by 1921 Lenin had convinced himself that for some time Russia would have to struggle alone as the sole Communist-run state. Hence a period of "peaceful co-existence" was necessary—if only to permit Soviet Russia to catch its breath and build up its economic and military might.

By the 1920's Moscow had thus learned that (1) world revolution would not come suddenly but, as it were, on the installment plan; future wars, crises, and depressions would usher in new "rounds" in the inevitable but seemingly protracted struggle; and (2) revolution apparently need not always be spontaneous but could be imported—or imposed—from without: in Poland in 1920, in Outer Mongolia and the Caucasus in 1921, the Red Army sought to bring "the benefits of communism" to areas where the local Bolsheviks themselves had been unable to seize power. But then, from 1921 to 1939, there was no power vacuum anywhere along the borders of the Soviet Union, and realism commanded Moscow to refrain from suicidal aggression.

Moscow took advantage of the long lull between world crises—the period of "temporary stabilization of capitalism"—to build up the Soviet economy and transform Soviet society. While discipline and coordination among the various Communist Parties throughout the world were being tightened (through the machinery of the Communist International, or Comintern, founded in Moscow in 1919), the Soviet foreign office strove to establish "effective business relations" between the U.S.S.R. and other states in more conventional ways. Diplomatic recognition and commercial treaties gradually readmitted Soviet Russia to the family of nations. "Realism" permitted Moscow to make diplomatic deals and conclude alliances with countries which even outlawed the Communists (such as Turkey in the 1920's, Nazi Germany in 1939-41, and the United Arab Republic in 1958). The same kind of realism came to equate the interests of international communism with those of the Soviet state—a comfortable syllogism that implied that Moscow could do no wrong.

Soviet policy—and its successes—have been rooted in a combination of ideas and power; the two fuse harmoniously in Soviet theory and practice. Yet until 1939 Soviet foreign successes were minor. In 1934-35 Moscow abandoned its previous isolation, joined the League of Nations, and concluded alliances with France and Czechoslovakia, as the double-pronged menace of Nazi Germany and expansionist Japan seemed to make common cause against them more urgent than Soviet hostility for the entire "bourgeois" world. Yet Moscow did not abandon this hostility (any more than the other powers abandoned their anti-communism). In 1939, when Stalin was confronted with the choice between an alliance with Britain and France against Hitler, or a pact with Nazi Germany, he chose the latter: it promised rewards far greater and more certain than what the Western powers were prepared to yield.

In the following year the U.S.S.R. acquired, with Hitler's consent, what had been Eastern Poland, annexed the hitherto independent Baltic States, occupied Bessarabia and Northern Bukovina, and after the costly "Winter War" with Finland seized several important Finnish areas along the Soviet border.

This was the beginning of the "second round" of international crises which were bound to enlarge the communist camp. However severe the Soviet miscalculation that led to the German invasion in June 1941, and the ensuing Soviet defeats, Moscow's tactics were flexible enough to marshal a sense of patriotism and a genuine wrath against the invader, to make

full, forced, and strained use of resources and manpower, to beat back the foe—and promptly resume the quest for expansion.

Partly with the consent of the Allies, but largely in defiance of agreements concluded with them during the great partnership of World War II, the Soviet Union—thanks to the advance of the Red Army—gained pre-dominance and soon a monopoly of power in a vast belt of states that came to constitute the Soviet "orbit." The second round, as Moscow has not tired of telling the world, was the fulfillment of a prophecy: it transformed the single communist state—Russia—into a "world system" of twelve Communist-ruled countries—from Albania to North Korea, and from Mongolia to East Germany—a bloc soon greatly strengthened and expanded by communist victories in China and Vietnam.

The demands of communism and the dictates of Soviet security, as Moscow sees them, coincided in justifying the expansion of the Soviet sphere. Once in control, it moved to reshape the newly won areas in the image of the U.S.S.R. While leaving them formal sovereignty, it consolidated all power in the hands of the ruling Communist Party—and a small layer of leaders dependent on Moscow within it. It moved to transform the economy by industrialization, collectivization, and planning on the Soviet model. And, as in Russia, it ruthlessly proceeded to eliminate all real or imagined opposition.

Just as after the first World War the borderlines froze and the areas of opportunity for communism vanished, so again after the "second round" the vacuum produced by the defeats of Germany and Japan was soon filled, and only a few areas of ambiguity remained—such as Berlin and Korea. It was here that the final skirmishes, long and costly, of the postwar realignment between the Soviet and the non-communist worlds were fought.

The Khrushchev Plan

Toward the end of his life Stalin realized that a new "temporary stabilization" had occurred in the non-communist world. It remained for his successors to draw the policy conclusions from this fact. The formula adopted by Khrushchev (in distinction from the more intransigent Stalinists like Molotov) calls for consolidation in Europe and penetration into the "under-developed" countries. Soviet foreign policy has followed it since 1955 and presumably will continue to do so unless a drastic change occurs in Europe—such as an agreement on mutual disengagement, or Communist victory in France or Italy.

The Khrushchev plan recognizes the existence of the Western coalition and the

absence of targets which Moscow could secure in Europe without provoking a wider conflict. Hence the Soviet attempt to freeze the European status quo: on the one hand, Soviet insistence on having the outside world recognize Eastern Europe as a Soviet-dominated area in which the West has nothing to say; on the other, since 1955 the conclusion of the long-delayed peace treaty with Austria, Soviet recognition of the West German government, Soviet withdrawal from the Finnish naval base at Porkkala, and after a breach of seven years a temporary improvement of relations with the Yugoslav state (though not with the Yugoslav Party, leadership, or ideology).

The same strategy calls for a concerted effort to augment Soviet influence in the "colonial and semi-colonial" countries, which Moscow views as the area of greatest opportunity for the present. It has seen, over the past three years, an intense and sometimes successful Soviet campaign to raise its standing in the wide crescent from North Africa to Japan—not so much through local Communist Parties (which do not even exist in some of the countries involved) as through diplomacy, economy, and propaganda. All of these have required a new Soviet posture of strength, peacefulness, and reasonable willingness to show off and share its accomplishments and resources.

Khrushchev's economic policies have included an ambitious attempt to gain leverage in the Middle East and South and Southeast Asia by granting loans and credits on favorable terms, by undertaking to construct industrial and welfare enterprises ranging from steel mills and dams to hospitals and stadiums, and by stepping up mutually beneficial trade. Politically, Moscow has skillfully promoted diplomatic and cultural visits and exchanges (including Khrushchev's and Bulganin's trip to India, Afghanistan, and Burma, and the visits of Nehru, Sukarno, Nasser, and others to the U.S.S.R.). It has played on the broad community of interests between the backward areas and the Soviet Union, posing as the major defender of peace and national sovereignty, as the protector of the small and recently colonial states in their common hostility to the West, to imperialism, to capitalism, and as a model of rapid economic growth as well as educational and scientific progress in a previously backward country.

This shift in Soviet strategy has required some change in outlook as well. Not only has it meant transferring attention from the most highly industrialized states—which had originally been expected to be the first to go communist—to areas with feudal or primitive economies, with large peasant, peon, or serf but hardly any

worker populations. It has involved replacing the traditional communist formula of intransigence, "He who is not with us, is against us," with a new slogan which in effect says, "He who is not against us, is with us today." While this spells no long-range acceptance of neutralism, it does seek to bracket "uncommitted" nations such as India, Indonesia, and the United Arab Republic with the Soviet bloc in what Khrushchev calls the "zone of peace"—an intentionally ambiguous term which capitalizes on the common strivings of the Soviet and "uncommitted" worlds.

The new sense of strength and success in Soviet foreign policy is well illustrated by Khrushchev's facile sayings to American visitors, such as his famous "We will bury you" and "Your grandchildren will live under communism." Perhaps the most telling revision of a Stalinist stereotype has been the abandonment of the formula of "capitalist encirclement." For more than a generation, Moscow repeated that the hostile capitalist powers who surrounded the Soviet state were preparing to attack and destroy the U.S.S.R. and were eager to send (or were actually sending) agents into Russia to sabotage and destroy the Soviet regime. The whole exhortation to "vigilance" on which much of Soviet domestic propaganda was centered, and the call to breakneck economic development fed on the argument that the U.S.S.R. must raise itself by its bootstraps before the "capitalist encirclement" destroys it. In March, 1958, Khrushchev saw fit to abandon this view. The changes in power relations between the Soviet and non-Soviet worlds now permitted some doubt "as to who was encircling whom."

Moscow soon explained that—as a result of the gains in territory, resources, population, and supporters in the "second round," after the end of World War II—the Communist camp is "significantly stronger" than the forces of "imperialism" in the world. It points to the fact that the Soviet orbit (including China) comprises nearly one billion men and that the Communist Parties throughout the world have over 33 million members. It stresses the success of the "anti-colonial" struggle in areas with 700 million people and the growing tide against the West in the remaining colonial areas with some 600 million. The anti-Soviet camp, then, is limited to an American-led coalition of about 400 million people, itself deeply split.

Thus in Khrushchev's view, the short-lived era of U. S. world leadership is becoming a matter of the past. Soviet economic gains, predominance in rocketry, space satellites, thermonuclear development, and even sports are taken as indications of the new Soviet position of primacy and strength.

Coexistence and War

The Communist conviction of ultimate victory has gone hand-in-hand with a skillful propaganda campaign in favor of peace and coexistence. On the face of it, there is a contradiction between championing peace and insisting on the inevitable collapse of your opponent, especially while sanctioning violence as an instrument of change. To resolve this contradiction, one must look at the Soviet view of war and coexistence.

In 1921 Moscow recognized that, since neither the Soviet state nor the outside world had managed to defeat the other, the two systems were in fact "peacefully co-existing." This did not mean that either had abandoned its objectives. It merely recognized a reality and its opportunities. Likewise, after World War II Soviet foreign policy was described by Moscow as "proceeding from the fact of coexistence for a long time between the two systems, capitalism and socialism." (Here and elsewhere it is well to bear in mind that in Soviet parlance "capitalism" includes countries with a social-democratic system, such as much of Western Europe, and the term "socialism" is reserved for countries of the Soviet bloc.)

The important question is whether this coexistence can last. Here the Soviet answer is both evasive and clear. Coexistence, Khrushchev stated in an interview with William R. Hearst, Jr., in 1955, could be "prolonged": "We on our part believe that communism is invincible and the future belongs to the communist system. . . . As to how long this coexistence can last, the answer is that it will depend on historical conditions." During his trip to South Asia he repeated his conviction that "the days of the capitalist system are numbered." Peaceful coexistence can last indefinitely, therefore, provided the non-Soviet world does not attack the U.S.S.R. and, equally important, recognizes the inevitable collapse of capitalism and accepts it. Since the Soviet leaders will give up their objectives only "when the shrimps learn to whistle," the prerequisite of *permanent* peace is the replacement of capitalism by communism without war.

Traditionally communism has distinguished between "just" and "unjust" wars—"Unjust" wars—for instance, between two "imperialist" states—are obviously condemned and must (as Lenin put it) be transformed into civil wars: the toilers in each of the fighting armies must turn their arms against their own exploiters and rulers. "Just" wars—for instance, the Soviet struggle against the Germans in 1941—of course call for the fullest support of the national war effort. In substance, any war fought by the Soviet Union is "just"

and must be supported by Communists everywhere.

Moscow gladly acknowledges the crucial role which the Soviet army played, for instance, in establishing the satellite regimes in Eastern Europe and North Korea in 1944-45. It accepts the old saying of Clausewitz that war is a continuation of policy by other means. In the peculiar terminology of Moscow, war can be explained as part of the struggle for peace. As the basic Soviet textbook of foreign policy states, "the struggle for peace can have different forms, depending on the historical circumstances. In one case it may be expressed in treaties, agreements, commercial relations, etc. with capitalist countries. In another case the necessity may arise to liquidate with armed might a hearth of war established by the imperialists at the approaches of the U.S.S.R. At the base of all these actions of the Soviet state lies one aim—strengthening peace."

To recognize the legitimacy of war is not to argue for it. The Soviet government has never purposely involved itself in a war (though it has gladly involved others); both the Finnish war of 1939-40 and the Korean war of 1950-53 (from which, moreover, the Soviet Union formally abstained) were based on miscalculations on Moscow's part: it did not expect the opponent to fight.

Until World War II the Soviet Union was felt to be too weak to embark on military adventures—and too busy with domestic affairs. After 1945, events were running in Moscow's favor. There was no need to risk war if history put victories into your lap without it. While admitting and preparing for the possibility of war, the Kremlin has—especially since Stalin's death—striven to avoid it. This conduct stems as much from the belief in the possibility of peaceful penetration abroad as from a realistic appraisal of the hazards of nuclear warfare.

After years of intensive, secret research, during which Moscow accused the United States of "atomic blackmail" and demanded the cessation of nuclear weapons production abroad, the Soviet Union has itself emerged as a leader in the thermo-nuclear field. Whatever the number of bombs, warheads, and missiles available, it is widely assumed that the United States and Russia have attained nuclear parity: either can effectively paralyze the other in all-out attack and retaliation. This realization contributed to a revision of Soviet military doctrine in the last few years: the previous scorn of "surprise attack" and the traditional reliance on conventional factors (such as manpower, equipment, military organization) have been rejected. Malenkov (and Mikoyan) even went so far as to insist that a new world war would mean the end of civilization—not only of capitalism

(as Moscow customarily avers); that therefore all problems must be solved without war; and that nuclear parity in effect deters the United States from launching an attack on the U.S.S.R., and vice versa.

But Malenkov was soon made to recant—and was himself ousted from power. His view was condemned as extreme and unwarranted in various ways. Yet the terrible prospect of nuclear war has not been lost on the Kremlin. Khrushchev grants that war is no longer "fatally" inevitable (though the distinction, important in Marxist theory, may in practice be so subtle as to be meaningless). In addition, the Soviet authorities have made themselves champions in the drive for the cessation of nuclear weapons tests and perhaps production. In March 31, 1958, having completed a series of tests, Moscow announced their unilateral suspension, reserving the right to resume if other powers did not follow suit.

Yet the Soviet record is a mixed one. It has consistently opposed foolproof control and inspection schemes; it has for years obstructed disarmament efforts through the United Nations; it has insisted that allowing foreign checks on Soviet nuclear activities would be like "admitting a stranger into your bedroom." Nonetheless, many observers feel that control of testing and perhaps of production and stocks of nuclear weapons is, as a matter of self-interest to the Soviet government, a "negotiable" issue—unlike many others—between East and West.

The reasons for Soviet interest in nuclear controls include (1) the desire to free, if possible, the resources now devoted to nuclear research and production for constructive, domestic needs; (2) to freeze the present situation, since Moscow feels it is ahead, and to forestall the emergence of new nuclear powers; (3) to further the disintegration and economic crisis within the Western camp—which Moscow deems a likely result of nuclear disarmament; (4) to obviate the hazards of arming fellow-Communists in China and Eastern Europe with nuclear weapons. Moreover, if they can be circumvented by the U.S.S.R., the pretense of controls would only further improve its relative standing. Meanwhile the Soviet campaign has won it prestige and repeatedly distracted attention from more concrete issues.

While "watertight" agreements may be exceedingly hard to negotiate and implement, the success of talks between Soviet and Western experts (e.g. on policing a suspension of nuclear tests, in August, 1958), suggests the common interest of both camps in exploring further the ways and means of devising rules to prevent the destruction of mankind, without sacrificing the interests and objectives of either side.

Summit and Security

The greater willingness of Moscow to seek agreements was symbolized by the "summit" meeting of heads of state in Geneva in 1955. In reality the meeting brought little agreement of consequence. Since the end of 1957 Moscow has again campaigned vigorously for a new "summit" conference, largely to underscore Soviet willingness to arrive at "peaceful" agreements, Soviet advocacy of nuclear disarmament and disengagement, and Soviet leadership within the communist camp. These objectives once again reflect Moscow's sense of its newly won "position of strength."

Soviet policy in various parts of the globe may be reduced to the following formula: (1) to maximize Soviet strength; (2) to maximize all splits within the "enemy" camp; and (3) to maximize ties and commitments to the Soviet camp.

The Soviet policy to build up its own strength is illustrated in the continued modernization and training of armed forces as well as the Warsaw Pact with the states of Eastern Europe. Khrushchev has remarked on various occasions that a hound must have teeth to be able to bite, and that anyone fighting the U.S.S.R. would "choke on it." Soviet policy-makers have a concern for security—the security of their own rule as well as that of the country and orbit they rule. So far as we know, they are not suicidal blunderers. And, while ideological blinders have persisted for half a century, there is evidence in the last few years of a greater willingness among Stalin's heirs to depart from time-honored axioms in favor of realistic policies.

In the Soviet view, security can be bought in different ways. At critical moments (1918, 1941) it was essential to trade space for time (which is always on their side). More often, however, security has consisted in territorial expansion. The whole concept of aggrandizing the Soviet state combines defensive with offensive purposes. The flexible framework of the Soviet constitution makes provision for "admitting" additional countries to the U.S.S.R. (as was done with the Baltic states in 1940). Other states can be controlled without formal incorporation (as have been Outer Mongolia since 1921 and satellite Eastern Europe since 1945). Short of complete security (which Moscow equates with the complete triumph of communism), Soviet leaders hold that security increases as the territory they control and the influence they wield grow. Hence the reluctance to retreat from East Germany; hence the Soviet insistence on a voice (and perhaps a share) in the Middle East; hence the continued efforts to play off France against Germany, Britain

against the continent, all of Europe against the United States, and generally to weaken NATO and other American-supported military and political coalitions. Hence also the demand that the West recognize the status quo in Eastern Europe: it is here, in the area presumably controlled by Moscow, that the efficacy of expansion has met its greatest challenge.

The Communist World

In spite of the formal dissolution of the Communist International in 1943, obedience to Moscow's dictates and discipline among the various Communist Parties remained high until after Stalin's death. Tito's Yugoslavia alone had managed successfully to challenge Soviet leadership within the communist camp; the real or imaginary followers of a similar "national communism" elsewhere were mercilessly extirpated in the following years. Then, with Stalin gone and his successors less expert and less well-known to foreign Communists, Moscow's pre-eminence came to be questioned. Moscow's insistence that all communist movements must follow the Soviet experience as the "single road to communism" aroused grumbling and doubts, which grew into a genuine crisis of confidence in Moscow's leadership after Khrushchev's denunciation of Stalin in February, 1956. Even such die-hards as Italy's Palmiro Togliatti momentarily asked whether the Bolshevik system as it had evolved in Russia was not rotting at the core and whether it had not forfeited the right of leadership. Instead of centralized dictation, the various revisionists wanted a "commonwealth of communist states" or a "polycentric" system, in which several co-equal capitals (such as Moscow, Peking, perhaps Belgrade, Rome, and Warsaw) would hold equal authority.

Some foreign comrades were soon persuaded that this was heresy. If Moscow ever seriously weighed such a reorganization—as part of the general relaxation of tensions it sought in 1956—the idea was completely abandoned after the events of October, 1956, in Poland and Hungary. These events and their backwash elsewhere drove home to the Kremlin that the short-lived "thaw" was an invitation to suicide. In its relations with the satellite states and with foreign Communists, Moscow now launched on a cautious but determined campaign to suppress all centrifugal elements, to reassert its primacy of authority, and to have the various parties acknowledge (as they subsequently did in November, 1957) that, whatever the leeway permitted each party, all must accept "proletarian international solidarity"—a euphemism for stringent coordination of policies under Soviet leadership.

The new drive for conformity has been dramatized by the execution of Imre Nagy (June, 1958) and the vigorous Soviet attack on Titoism. "Revisionism" in foreign affairs has been a catch-all charge which blasts away at demands for reduced Soviet influence within the "socialist camp," just as the charge of "revisionism" on the home front has been leveled against those who demand less party control over the army (Zhukov), over the state and economy (Malenkov), the police (Beria), and the arts. It is revealing that Moscow seeks to combat most insistently neither the menace of the non-communist world (which is deemed to be marching toward its inescapable doom), nor the "dogmatic left" Communists (the few remaining advocates of more hasty or more violent revolution), but the "revisionist right." The attack is leveled primarily against those in Russia and elsewhere in the communist world who would rethink the problems of industrialization and totalitarianism, of a thermodynamic world and a socialist society, in other than official Soviet terms.

The survival of Tito outside the fold and of Gomulka within it is a constant reminder of Moscow's headaches. Other would-be Titos and Gomulkas—and Nagys—remain within the Soviet empire, and unquestionably other rifts have remained concealed from the public eye. Most important among these are probably Soviet relations with Communist China.

The Chinese Communists came to power and consolidated their hold in the face of a rather doubting attitude in Moscow. On the one hand, a Communist China meant a tremendous increase in the resources, prestige, and strategic perimeter of the Communist world. On the other, to the Moscow-centered Stalinists it foreshadowed the emergence of a power within the Soviet family strong and independent

enough not to accept Moscow's pronouncements and dictates unquestioningly. Indeed, behind the façade of fraternal co-operation, Peking and Moscow appear to have been at odds more than once in recent years, the general trend being clearly a growth of Chinese influence at the expense of Moscow. This was true both of Asia generally (the Bandung conference was an illustration) and of the Communist Parties in the Far East and Southeast Asia in particular. It was illustrated by the apparent prevalence of Chinese, rather than Soviet, influence in North Vietnam, and by the growing part played by Peking in North Korea, Outer Mongolia, and other areas contested by the two communist states. And it was confirmed by the dramatic visit of Khrushchev to Mao Tse-tung in July-August, 1958.

Chinese communist pronouncements on East European events—such as the Yugoslav and Hungarian crises—and on the Suez affair are other tokens of Peking's new role as a world power. Moscow has responded to it with greater circumspection and tact in dealing with China than was true under Stalin, but also with a peculiar hedging on the issue of China's place in nuclear weapons development as well as economic aid. All these reflect the concealed tug-of-war between the two colossi, whose interests for the present and the immediate future coincide, but whose eventual clash, if and when it comes, could be crucial for the communist empire.

Soviet foreign policy thus faces the dual task of coping with potential enemies and professed friends. While it has been scoring some signal successes against the former, it has inevitably run into difficulties with the latter. International communism is proving weakest at the very time when the Soviet state has reached a new pinnacle of strength.

SATELLITE EUROPE

By

Paul E. Zinner,

Assistant Professor of Government, Columbia University

THE TERM Satellite Europe applies to eight communist-dominated states—East Germany, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania and Yugoslavia. They form a buffer between the Soviet Union and the rest of Europe from the Baltic Sea in the north to the Adriatic in the south.

In the spring of 1958, Satellite Europe

once more found itself embroiled in violent ideological controversy. This time as on previous occasions the villains under attack were President Tito of Yugoslavia and like-minded Communists elsewhere. They were charged with the heresy of revisionism.

The viciousness of the struggle was not limited to invective. In the background,

lurked more potent weapons—economic reprisals against Tito in the form of cutting off promised loans and deliveries of much needed goods, political pressure on Poland and in extreme cases the threat of military intervention—as in the case of Hungary—against any recalcitrant communist state. The gravity of the controversy was tragically demonstrated by the announcement in June, 1958, of the secret trial and execution of Imre Nagy and several of his associates who headed a nominally communist government during the Hungarian revolution in October–November, 1956.

Nagy was a dissident Communist. Two charges were brought against him; one accused him of treason at the time of the revolution, by renouncing Hungary's adherence to the Warsaw alliance of communist states; the second charged him with setting the stage for the revolution (the Communists call it counter-revolution) by the ideas which he propagated. Of the two, the second was considered more serious. Without it no revolution would have occurred. Nagy's ideas indeed refuted several principles upon which communist governments are founded. He disliked collectivization of agriculture, he favored much more attention to the needs of consumers and less to industrial growth. He sought the cooperation of non-communist politicians in running the government. Worst of all, he desired national independence.

Of course, to date no country other than Hungary has staged a popular uprising sweeping away its communist rulers, if only for a moment. But the deviationist ideas of Nagy and his fellow Communists were symptomatic of disillusionment among Communists everywhere with the performance of the system of government to which they had subscribed.

Reds' Special Domain

The Soviet leaders regard the East European states under communist rule as their special domain. They brook no outside interference in the area and tolerate no move toward independence initiated within the area. The Soviet Union rejects any attempt of discussing at international conferences any possible change in the status quo in Eastern Europe. The refusal is based on fear of what would happen if the peoples there had free choice in expressing their political preferences. But it demonstrates the Soviet's stubbornness in holding that the situation created in Eastern Europe is irreversible and will remain so as long as Russia has anything to say about it.

For the past ten years none of the communist governments except the Yugoslav

has enjoyed any independence of action in foreign affairs. This applies even to Poland, which managed to carve out for itself a large amount of freedom of action in domestic matters in 1956. Yugoslavia ruptured its dependent relations with the Soviet Union in 1948 and made it stick. Since then its diplomacy has served but one aim, to preserve independence against encroachments from East and West. As far as the outside world is concerned, the other communist-dominated states act in unison at the command of the Soviet Union. They bolster Russia in its political objectives. They obediently second Soviet policy in the United Nations. They contribute heavily to the Soviet economic offensive against Western positions in the under-developed countries.

This does not mean that they are totally subjugated and without any will of self-assertion. The unity of these countries is much more apparent than real.

Their conquest by communist forces could not easily be averted. It came in the wake of World War II, when Soviet armies swept victoriously over the Eastern portion of Europe and Russia emerged as the dominant power in Europe. None of the countries could withstand the onslaught of Soviet military, diplomatic, or psychological pressure, combined with skillful political maneuvering by local Communists. By February, 1948, when a coup d'état, in Prague, sealed Czechoslovakia's fate Communists were firmly in control of the entire area. Years of extremely harsh exploitation followed. Under Stalin's relentless prodding all countries were rapidly being transformed into mirror images of the Soviet Union. They chafed under heavy police terror, they toiled to meet impossible economic goals, they suffered national humiliation by seeing their historic traditions and cultural values trampled upon in favor of worshipping at the shrine of the "new Soviet man."

Let-up After Stalin

Stalin's successors in 1953 permitted a let-up in the feverish pace of "socialist transformation." They also began to woo Tito to win him back as a member of the "socialist bloc." Their policies unwittingly released latent trends of opposition not only among the captive peoples but also among dissident Communists. The relaxation in pressures topped off by the denunciation of Stalin in February, 1956, encouraged criticism of police and economic abuses by local communist tyrants. Not all countries responded alike. Their behavior reflected a combination of many factors ranging from national tradition to dissension in the Communist Parties. Riots

in Pilzen, Czechoslovakia, home of the famed Skoda works, and in East Berlin in 1953 as well as in Poznan, Poland, in June, 1956, were forerunners of more serious trouble. In Poland and Hungary, the situation clearly got out of hand. In October, 1956, Poland staged a silent revolution by handing command in the Communist Party to Wladyslaw Gomulka, a man who was symbolic of opposition to the Soviet Union. In Hungary, events took an even more decisive turn.

The Choice in Hungary

Neither in Poland nor in Hungary was the Soviet Union able to forestall impending developments. Risking all out war with Poland at the time was apparently considered too high a price to pay to keep Gomulka out of power. In Hungary, it had little choice between losing the country completely and exposing Soviet brutality. The revolution was crushed by massive military might after it had demonstrated that a communist totalitarian regime could be overthrown.

Khrushchev has acted through two formal instruments, the Warsaw Pact and the Council for Mutual Economic Aid. The Warsaw Pact is a military-political alliance concluded in May, 1955, between Russia and seven European satellites (excluding Yugoslavia). Its military commander is Soviet Marshal Ivan Konev. Touted as a counterpart of the NATO structure, it has in time developed more formidable characteristics so far as its lesser members are concerned. It is essentially a means of holding them in check, as Hungary's ill-fated attempt at unilateral withdrawal from the Pact indicated.

The Council for Mutual Economic Aid has existed since 1949. But it came into its own only after Stalin's death and more particularly during the past two years. It is now an effective coordinating agency of the satellite economies. Intraorbit specialization has been pushed at an impressive rate. While it is designed to alleviate unnecessary duplications in economic production among the satellites—it also has the effect of increasing their interdependence and dependence on the Soviet Union, economically and politically the most powerful participant, which is the largest customer as well as the prime source of needed raw materials and foodstuffs. In 1958, intraorbit trade accounted for roughly 70% of the foreign trade volume of the satellites.

Meetings of the Warsaw Pact Council and of the Council for Mutual Economic Aid at Moscow in May, 1958, underlined the role of these organizations in weaving an inextricable web of military, political, and

economic commitments around the satellites. Publication in August of a new theoretical journal in Prague, in turn, underscored the importance of the relentless ideological struggle. The new periodical will be an important weapon in the never ceasing ideological battle against all types of heresies. The articles in the journal will carry the authority and weight of the ruling Kremlin circles. Not to echo these views nor to abide by them will entail grave risks for any satellite.

It may well be, as some observers have suggested, that as of the moment Satellite Europe is a net liability rather than an asset to the Soviet Union. Militarily, little reliance can be placed in the satellite armies, as the Polish and Hungarian events of 1956 showed. Politically, the area is a headache if not an acute source of contamination threatening the "socialist camp" with dissolution from within. Economically, several of the countries are a drain on Soviet resources. Even if this is so, the Soviet Union has given no hint that it considers any part of the area expendable in diplomatic, political, or military compromise. Soviet determination to stabilize the influence of communism in Eastern Europe and persistent opposition to such plans among the captive nations are the keys to future developments there.

Albania

Albania is the smallest and least significant of the East European satellites. It is a backward, economically underdeveloped mountainous little state bordering on the Adriatic Sea. It has no common frontiers with any Communist-dominated country except Yugoslavia. Its exposed geographic position is aggravated by the lack of adequate surface transportation. Access to it from "fraternal" communist lands is limited to a precarious sea route which complicates economic exchange and would act as an almost insuperable obstacle to effective assistance in time of war. The inadequacy of Albanian port facilities has not been substantially remedied during the past few years, despite persistent reports of construction of submarine pens for the use of the Soviet Navy.

Albania's greatest utility to the Soviet bloc consists in its nuisance value in harassing Tito's Yugoslavia. On a number of occasions since 1948, Albania was chosen as springboard for propaganda attacks on Yugoslavia. The common frontier provides opportunities for infiltration of agents into Yugoslavia and escape of Soviet sympathizers from Yugoslavia as the case may be. It can also set the stage for

frontier incidents should they be deemed desirable to precipitate more serious quarrel with Yugoslavia. In the late spring and summer of 1958, following the aggravation of the dispute between Tito and the Soviet bloc, a number of dissident Yugoslavs indeed made their way across the Albanian frontier and a series of minor border clashes also took place.

Current tension with Yugoslavia overshadows Albania's traditionally hostile relations with its other neighbors, Greece and Italy, although Italy continues to serve as a base of operations of Albanian refugees who seek to overthrow the present communist regime. Throughout World War II, Albania was occupied by Italian troops, who caused King Zog to flee. In the late 1940's, in turn, Albania was used as a supply base and asylum for the Greek communist rebels who were engaged in civil war against the Athens government.

Strained relations with Yugoslavia stem from 1948 when Tito was expelled from the Cominform. Until then Yugoslavia had virtual tutelage over its smaller neighbor. Through a series of treaties which it later denounced, Albania was well-nigh reduced to the status of a federal unit of Yugoslavia. More importantly, the Albanian Labor (Communist) Party which was organized only during World War II was directly subordinated to its "parent" organization, the Yugoslav Communist Party. After 1948 that control passed directly into the hands of the Russians. The Albanian Communists never acquired separate membership in the Cominform. In 1955, however, Albania was admitted to the Warsaw Pact.

The break with Tito led to extensive purging in the Albanian Communist Party which took the toll of many lives, including that of Koci Xoxe, one of the leading figures in the party. Since Xoxe's execution in 1949, Enver Hoxha, first secretary of the Party and Mehmet Shehu, appointed prime minister in 1953, have been the most powerful local personalities. They have succeeded in maintaining the stability of the communist regime.

Bulgaria

Of all the Slavic nations of Eastern Europe, the Bulgarians are the most closely related to the Russians by virtue of national origin, language, and a common religion. Moreover, the history of Bulgaria has been intimately linked with Russia since the nineteenth century when Russia emerged as the champion of Bulgarian independence. The reservoir of good will toward Russia was not entirely dissipated by the advent of Soviet rule there. Bulgarians continued to regard Russia as a

friendly, Slavic power rather than an exploiting, inimical communist state. The people's friendship for Russia as a potential protector of Bulgarian interests was enhanced by internal political conditions. In sharp contrast with popular sentiment, the royal house of Bulgaria showed a marked pro-German orientation, committing the country to assisting the German war effort in both World Wars. The political life of Bulgaria in the inter-war period was largely under the sway of a small urban minority, bolstered by the military who in 1923 ousted from office a peasant government which had won widespread acclaim in 1919.

Given the wide gulf between rulers and ruled, it was not particularly difficult to organize a broad anti-government coalition during the war. Going under the name of Fatherland Front, it included the peasant and Communist Parties as well as Social Democrats and the so-called Zveno group, which consisted primarily of disgruntled army officers. As the military fortunes of the Axis powers faded and the Bulgarian royal house was in decline, the four-party coalition staged a brief uprising in September, 1944, and swept the government from office. The Communists then immediately turned on their close collaborators to whittle down their strength and set the stage for a one party dictatorship. The peasant party with its good record stood out as a prime target. Representing the interests of the countryside, the party had a natural appeal to the majority of the people, about 80% of whom derived their livelihood from agriculture. The Communists themselves, however, also enjoyed a measure of public support. Even after World War I, the Communists were second in popularity to the peasant party.

Under the leadership of the veteran Communist Georgi Dimitrov, the country became a model satellite. After Dimitrov's death in 1948, his brother-in-law, Vulko Chervenkov, took over the reins of power. He dealt swiftly with opponents within the Communist Party itself, executing Traicho Kostov, an old-time Communist with reported nationalist leanings, and demoting Anton Yugov, the former Minister of Interior. Under Chervenkov, Bulgarian foreign policy was marked, among other things, by serious clashes with Greece, which led to the suspension of diplomatic relations.

Similarly, in the face of attacks on its Minister, Donald Heath, the United States withdrew its diplomatic representatives from Bulgaria in 1950. Relations remain suspended despite three attempts in recent years by the Bulgarian government to exchange representatives.

Bulgaria also played an important role in the campaign against Yugoslavia. Questions of a possible federation between the two countries were discussed prior to 1948 and while the idea had supporters as well as opponents in both countries, it was sternly denounced as a Titoist attempt at subjugating Bulgaria after 1948. Relations between the two countries improved somewhat after 1953, but they remain tense. Attacks against Yugoslavia delivered at the Communist Party Congress in Sofia in June, 1958, helped to fan the flames of discontent and enmity once more.

Chervenkov's personal rule was similar in character to Stalin's and closely resembled Rakosi's personal dictatorship in Hungary. It lasted with only minor modifications until 1956. After Stalin's death, when all Communist parties split the post of first secretary and prime minister between two separate individuals, Chervenkov retained the premiership and Todor Zhivkov became party secretary. In 1956, following the denunciation of Stalin, Chervenkov was also severely criticized as a practitioner of the "cult of personality." He yielded the premiership to Anton Yugov, his one-time opponent. But Chervenkov was not completely eliminated from the Party leadership and in the spring of 1958 his star again began to rise. The Party congress held in June confirmed him as a member of the Politbureau and as Minister of Culture he was responsible for containing whatever signs of rebellion Bulgaria's intellectuals might show.

Despite a grim record of rule, the Communist Party does not seem to be faced with massive pent up hatred on the part of the people as in Hungary. The Party itself, despite a history of internal conflicts, shows no signs of dissension serious enough to threaten its unity and undermine its capacity to govern. The Bulgarian economy, still chiefly based on agricultural production, has experienced less dislocation than the economies of almost all other satellite states. Given the predominantly agricultural character of the country, it has made the greatest strides toward completing a program of land collectivization. More than two-thirds of Bulgaria's arable land are held by collective farms. This is the largest percentage by a wide margin among Russia's East European satellites.

Czechoslovakia

Czechoslovakia occupies a pivotal position in the Soviet orbit. It is a heavily industrialized country and as such is used as an important workshop of the area. It supplies a substantial portion of the capital goods needed for industrial expansion

by other, more backward People's Democracies. It also makes a significant contribution to the Soviet economy. Czechoslovakia's political importance to the U.S.S.R. is largely a function of its economic potential. This is not to say that the Communists did not consider Czechoslovakia, the most westernized of the smaller East European states, possessing the richest tradition of democratic government, as a coveted prize. Militarily, Bohemia and Moravia, the two western provinces of the country, have long been regarded as invaluable operational bases in Central Europe.

Czechoslovakia is for the moment one of the more docile of the satellite states. Its domestic political life has registered few of the disturbances that have marked developments in Poland and Hungary. The Communist Party appears firmly in control of the situation. Under the surface not all is as serene as the Party leadership would have it, but Communist authority is not substantially challenged from any quarter.

The structure of the country's government still distinguishes it from the other People's Democracies. For unexplained reasons Czechoslovakia has preserved the institution of the presidency and the incumbent is actually endowed with political power. For the rest, the political structure conforms closely to the pattern prevailing throughout Eastern Europe.

A Congress of the Communist Party—the eleventh since its foundation in 1921—held in June, 1958, confirmed leading personalities in their positions and approved policies as well as progress being made toward the achievement of "socialism." Top men in the Communist hierarchy are Antonín Novotný, who combines his post of first secretary of the party with the Presidency of the Republic.

Among shortcomings noted at the Congress was apathy by the population toward active participation in party affairs. The age and social composition of the party has been deteriorating, showing a lack of interest among the youth and the workers in identifying themselves with communism.

A vexing issue is the relation between Czechs and Slovaks as partners in the state. The problem is not new. It was one of the contributing causes to the downfall of the first Czechoslovak Republic in 1939. However, the Communists set out to obliterate the sources of friction. They claimed to favor wide measure of self-determination for the Slovaks and invested heavily in that province to reduce the inequalities between its industrial development and that of the Czech lands. Slovakia, indeed, has a special provincial

executive, the Board of Commissioners, and a provincial assembly, the National Council. They are not altogether paper organizations. But the supremacy of the central government in Prague is everywhere manifest and traces of Slovak "separatist" aspirations are abundantly evident. Substantial differences between the economic levels of Slovakia and the Czech lands persist. Finally, profoundly divergent attitudes toward religion also serve as a source of conflict. The Slovaks are still preponderantly an agricultural people with strong attachments to the Catholic Church to whom about two-thirds of the population belong. The Czechs, of course, take their religion much more lightly. While the majority are Catholics, they abide by a strong national tradition of Protestantism in which political, social, and religious elements intermingle.

In ideological matters and foreign affairs, the Czechoslovak Communists have faithfully toed the Moscow line. They are among the more vehement critics of revisionism—signs of which they have detected in their own midst—and have lashed out vigorously against both Imre Nagy and Tito's Yugoslav regime. The subservience of the Czechoslovak Communists to Moscow and the passivity of the people are to some extent explained by a lack of realistic alternative in the country's foreign policy orientation. The Czechs, in particular, still nurture profound distrust of the West for having let them down in 1938 at Munich, and they fear the Germans, with whom they have a long frontier. Unlikely as it may be, the possibility of a return of some or all of the roughly 2,500,000 Germans expelled from the Sudeten areas after World War II understandably fills the Czechs with uneasiness.

The economic situation of Czechoslovakia surpasses that of any other satellite. Two reasons may account for this. The country started its program of economic expansion in 1949 with a much broader industrial base than the other satellites, except East Germany. It also made fewer mistakes in economic planning.

At present, Czechoslovakia stands second to East Germany in the volume of foreign trade with the Soviet Union. It is a chief supplier of industrial and consumer goods of the most varied types including steel, iron and engineering products, shoes, textiles, and housewares, to the Communist bloc and to underdeveloped areas. It is also a major source of arms supply. In the process of industrial expansion, Czechoslovakia as some of the other satellites became an importer of food stuffs to the tune of close to 1,000,000 tons a year. It is also dependent on Soviet

raw materials to keep its industries going. But real wages never decreased as steeply as in Poland and Hungary and the standard of living remained higher than anywhere else in the Communist orbit.

The workers have been remarkably successful in extracting economic concessions from the authorities in terms of wages and fringe benefits. They have also shown a strong tendency to drift into administrative positions as against jobs at the bench. Despite these "unhealthy manifestations," which invite continuous retort from the authorities, worker productivity is relatively high, and the economy in general is functioning at a high level of efficiency.

The economic program mapped out by the 1958 Communist Congress envisages no let-up in the pace and no change in the direction of further growth. Whatever it means, the Czechs have the attainment of "socialism" in sight and have set their aim at being the first satellite to achieve this goal. Among other things, their blueprint calls for continued collectivization of agriculture. They now stand second only to Bulgaria in the percentage of arable land and farm families to be found in collectives. In the spring of 1958 there were 11,378 collective farms with a total arable area of 3,461,548 hectares of land, and a population of 436,750 peasant households. An important feature of the current economic drive is the completion of a social revolution of major proportions. Remnants of the middle class who survived in sundry managerial and office positions are systematically moved to production jobs. Their place is taken by workers promoted from the bench.

The Communist conquest of Czechoslovakia was essentially a graduated process extending from May, 1945, when the country was liberated from the Nazis to February, 1948, when the Communists seized power in a deftly executed coup d'état. The fall of Czechoslovakia signalled the ringing down of the Iron Curtain over the Soviet-dominated portion of Europe with a tone of finality.

Unlike other nations in which anti-Russian feelings were either based on historical experience (Poland) or on still-retained unpleasant memories of an earlier encounter with bolshevism (Hungary), the socially progressive Czechs had no real fear of Soviet communism which they thought was inimical only to reactionary nations, classes, or individuals. This attitude reflected favorably on the Communist Party. The Communists who were allowed to function in the open during the inter-war period always attracted a sizable number of voters. They returned to Czechoslovakia after six years in exile

with enhanced prestige. Soft pedaling revolutionary aims and pursuing a strongly nationalist policy built around the expulsion of the German minority, they appealed to even larger number of voters. In elections in May, 1946, they won a clear plurality of 38% of the votes, the highest percentage ever obtained by them in free elections anywhere. Although a five-party coalition governed the country, the Communists exercised preponderant influence in it. As time went by their popularity waned. Simultaneously Soviet designs on completing the capture of Eastern Europe were accelerated. Under the circumstances, the Czechoslovak Communists exploiting the numerous positions of power they held throughout the government, the police, and other important institutions such as the trade unions, maneuvered their opponents into a hopeless situation and capped this maneuver by a successful coup d'etat.

Days after the coup, Jan Masaryk, the government's Foreign Minister, son of the illustrious founder and first president of Czechoslovakia, Thomas G. Masaryk, committed suicide. President Eduard Benes resigned in June, 1948, rather than ratify the new Communist-inspired constitution. He, too, died shortly thereafter. The Communists, in turn, moved relentlessly to consolidate their power and reshape the country's political and economic structure in the image of the Soviet.

East Germany

In many respects, East Germany occupies the most interesting and most complex position in satellite Europe. Its importance derives from several sources. It is the farthest point of penetration of Soviet military and political influence in Europe. As such, it is both an indispensable springboard for further Communist expansion in Europe and a first line of defense. It has surpassing significance in affecting an overall settlement for Germany, which remains the central problem of international concern in Europe. It is an invaluable asset to the Soviet bloc by virtue of its advanced industrial development even though it is lacking in a number of vital raw materials.

Officially designated the German Democratic Republic, it was declared a "country" only in October, 1949, following the adoption of a constitution in the previous May. Its boundaries coincide with the zone of occupation in Germany conferred upon the Soviet Union at the end of World War II. To this day, the Western powers, including the Federal Republic of Germany, also a postwar creation made up of the occupation zones of France, Great Britain,

and the United States, refuse to acknowledge the legal existence of the German Democratic Republic as a state or a separate sovereign entity. They regard it merely as a disguised Soviet dependency which is directly administered by the occupying authority. The Soviet Union, for its part, is steadily building up the German Democratic Republic as a full-fledged people's republic indistinguishable from any other Communist-run state in Eastern Europe.

Similarly, the Soviet government seeks to bolster the prestige of the East German regime. Full sovereignty, whatever that means, was bestowed on it in September, 1957, and the Soviet Union is represented through an ambassador. The presence of Soviet troops is regulated by a status of forces agreement akin to that signed with Hungary and Rumania. To underscore Soviet interest in East Germany, Khrushchev visited there in the summer of 1957 and again in July, 1958, when he attended the Congress of the ruling Socialist Unity Party.

The Issue of Unification

In line with these efforts the Soviet government seeks to force some form of recognition of the East German authorities by the West. The Soviet government for years now has referred all discussions of the question of German unification to the East and West German governments as the only qualified parties to deal with this matter.

So long as German unification is a major European issue, and it is likely to remain that for some time to come, East Germany is bound to be a pawn in an international power game. It is inconceivable that East Germany should be allowed to develop an independent foreign policy. But then, none of the other satellites can pursue an independent line in foreign affairs, either. One of the differences between them and East Germany is the latter's broad exposure to Western influence through the fluid frontier it has with the Federal Republic, not in any territorial sense but in terms of the heavy two-way traffic in temporary visitors. In addition, of course, there is a steady flow of escapees from the East at the rate of about 5,000 a week. It is a good demonstration of the political preferences of the people living under communist rule.

The fluidity of the frontier and the intimacy of person to person contacts place a high premium on vigilance against the possible defection of the entire "country" from the communist orbit. One form of precaution is the presence of Soviet troops. Though their stationing is formally regarded as "temporary," they fulfill an important function in keeping the communist administration in power. Just how vital Soviet troops are to this end was

dramatically demonstrated in June, 1953, when Soviet motorized units had to be engaged to quell a workers' riot in East Berlin which threatened to get out of hand because the East German police and defense detachments could or would not cope with it.

The Russians have shown no inclination to give up East Germany or to distinguish it in any way from any other Communist-held area. East Germany is as closely integrated with the socialist bloc as any other people's democracy. It is a member of the Warsaw Pact and participates in the Council for Mutual Economic Aid. It has a series of bilateral trade agreements with other Communist-ruled states and is closely tied to the Soviet economy. In money volume it has the largest trade turnover with the Soviet Union of all the East European states. A comprehensive seven-year plan for closer coordination between the Soviet and East German economies has been worked on.

The plan seeks sizable expansion of the East German chemical industry. In the process, East Germany will become appreciably more dependent on the Soviet Union. By 1965, the final target date of current long range coordinated planning, the German Democratic Republic will import four times as much oil than in 1957 (4.8 million tons), four times as much pig iron (1.6 million tons), five times as much aluminum (80,000 tons), three times as much copper (43,000 tons), and two and a half times as much rolled steel (1.6 million tons). In return, East Germany will deliver more products of the machine building and chemical industry. Interestingly, until 1962, Soviet deliveries are expected to exceed East German deliveries by a wide margin.

Communist Policies

The purpose of communist policies in East Germany appears to be to enlarge the gulf with the Federal Republic rather than to reduce it, and to tie the area as closely to the communist bloc as possible. The hope might well be that in this manner some of the disadvantages of East Germany against West Germany would be offset. In the event of unification, two truly distinct social and political units would have to reconcile their differences. If the changes in East Germany were profound enough—that is, if they were entrenched in the social and economic fabric of the society and were not limited to skin-deep control by a Communist government—the East German regime would have a far better opportunity at asserting itself than under any other condition. The communist conception might well envisage a federal solution for Germany, with the Eastern unit, though smaller, playing the role of the tail wagging the dog.

Just how firmly the communist system is ensconced in East Germany cannot be determined with any degree of accuracy. The fact that there have been few signs of profound unrest since the riots of 1953 means nothing. Having been crushed once without the slightest hint of Western assistance to them and having seen the Hungarians brutally beaten down, the East Germans are unlikely to display provocative attitudes.

Meanwhile, the East German economy which few considered viable, has shown steady if slow improvement. According to official sources, East Germany is the second industrial power in the communist orbit and the fifth in Europe, excluding Russia. An economic program approved in January, 1958, calls for a 25% rise in industrial production in the next three years. In the late spring, the government finally abolished food rationing, although prices remain high and there is a scarcity of consumer items.

Hungary

Hungary continues to exist in the shadow of its short-lived revolution of October, 1956, which swept the local Communist Party out of power and was put down only by massive intervention by Soviet troops. The execution of Imre Nagy and several of his associates in June 1958, was primarily meant for foreign consumption. Coming as it did in the midst of acrimonious debate on the issues of unity and diversity in the "socialist camp," it was aimed primarily at Tito. But it also served warning to Communists everywhere of the consequences of ideological deviation which threatens the theoretical precepts and undermines the practical achievements of communism. In its Hungarian setting, the trial was the latest in a long series of trials of Communists who abetted the revolution and non-Communists who participated in it. It served as a grim reminder of the determination of the shaky regime of party boss Janos Kadar and Premier Ferencs Muennich to settle scores with all those who collaborated in overthrowing the "people's democratic order."

Since Nov. 4, 1956, when it was installed in power by Soviet bayonets, the Kadar-Muennich regime has fought viciously to erase all traces of the revolution, restore political controls and rehabilitate the economy which sustained fearful losses during and after the revolution when workers refused to go back to their jobs.

One of the first tasks to which the government directed its attention was to break the power of the workers' councils

These were perhaps the most original and most significant institutions to which the revolution gave rise. For weeks after the revolution was put down, they were the only organs of power which commanded any respect from the people and they were, of course, bitterly opposed to the communist regime. By subterfuge and guile, promises and perfidy, the government managed to arrest the leaders of the Budapest Central Workers' Council. They were subsequently executed. Through martial law and additional threats of reprisals a general strike was eventually broken, the workers' councils were dissolved, and the formal authority of Communist-dominated trade unions was restored.

Having dealt with its most formidable opponent, the government turned its attention to Hungary's intellectuals, who were instrumental in fomenting discontent. The Writers' Association was dissolved and a substantial number of writers and journalists were arrested. Some of the more prominent ones (e.g. Tibor Dery, Zoltan Zelk, Gyula Hay, and others) were tried and sentenced to long prison terms. Meantime the Communist Party itself, which completely disintegrated during the revolution, slowly rebuilt its shattered organization.

Functioning under a new name, the Hungarian Socialist Workers' Party, it held congress in the summer of 1957. At that time it claimed to have about 350,000 members. Its position in the country, however, remained uncertain. Without the support of Soviet troops, whose numbers were variously estimated at 80,000 to 100,000, the Hungarian Communists could not maintain themselves in power as even Khrushchev found out when he toured the country in the spring of 1958.

But the presence of Russian troops assures tranquility. The chance of significant disturbances seems remote. Economically Hungary is at least a temporary liability to the Soviet bloc. The substantial losses in production—estimated at between 10 and 20 billion forints—could not be made up without loans and increased imports of all types of goods, including much food from the Soviet Union and other communist-ruled states. At that the economy has staged a remarkable comeback. By 1958 few of the economic effects of the revolution were still in evidence. Production was reported to have been restored to the pre-revolutionary level.

Try as they would, however, the Communists have been unable to erase the spiritual legacy of the revolution which represented a rare display of spontaneous outburst of popular indignation, joined in by a large number of disillusioned Communists. Far from being a "counter-revo-

lutionary" rising engineered by adherents of the pre-war system of semi-feudal social organization and obscurantist politics, it was mainly the work of young people. Many of them were brought up entirely in communist schools and grew contemptuous of the conditions of life forced upon them. In the time-honored traditions of oppressed people, the revolution was an anguished outcry for national self-determination. Its primary aim was to get Soviet troops out of the country and assure Hungarian independence by neutralizing the country, if necessary, on the pattern of Austria. In domestic matters the people wanted a democratic political order to replace the one party dictatorship with its many terroristic abuses.

Communism came to Hungary—as it did to all other countries in Eastern Europe—at Soviet gunpoint.

In the spring of 1953, when Stalin died, the political and economic situation was recognized to be so bad as to call for drastic remedies. Thus on the initiative of the new Soviet leadership, Hungary embarked on a program of moderate policies, known as the "new course." Its champion was Imre Nagy, who became prime minister in June, 1953, while Matyas Rakosi retained the post of first secretary of the Party.

The "new course" raised hopes of a better future. It eased the economic burdens of the population; farmers were even permitted to leave collectives. It also brought alleviation in the police terror. But the Party leadership with Rakosi, Erno Gero, and Mihaly Farkas at its head did not approve of the change in "course" and worked to undermine Nagy's policies. Seizing an opportunity provided by shifts in command in the Soviet Union, it ousted Nagy from office and called a halt to his program in April, 1955. This led to increased bitterness among the people and spurred opposition even within the Communist Party. Communist writers and intellectuals working through the Writers' Association and a newly organized debating society, the Petöfi Circle, so named for Hungary's famous revolutionary poet, grew ever more critical of the country's political leadership. They demanded reforms and a return of Imre Nagy to the premiership.

Through 1956 the intellectual ferment spread to the universities and beyond—to the workers and even the Party functionaries. When, coincidentally with denunciation of Stalin, it was revealed that the Communist Rajk and his fellow accomplices had been executed on trumped-up charges, indignation within the Party could no longer be contained. Rakosi was

dismissed, but his close associates retained control of the Party and fought vicious rear guard action.

Fired by the example of Poland's bloodless "October," Hungarian Communists who were seeking reforms called a sympathy demonstration. Their hope was that it would force the regime to make the desired concessions and return Nagy to government office. But the demonstration got out of hand and shooting started. The population, once aroused, could not be held back. Under the influence of patriotic slogans, of memories of past revolutionary greatness, of the intense nationalism which always distinguished Hungary, and of the pent-up frustrations of the past decade, which led to "hatred" of communism, Communists, and Soviet Russia, the masses took command of the situation. The Hungarian Workers' Party—helpless in the face of the enraged mob—disintegrated. All that remained of it was a six-member "caretaker" executive and Imre Nagy, who though a Communist, had become a symbol of opposition to all bad things associated with communist rule. Carried further than he wanted to go, he capitulated to the demands of the revolution and promised free elections and a multi-party system. He also renounced Hungary's participation in the Warsaw Pact and asked for neutral status on the Austrian model.

Although defeated at the hands of the Russians, the revolution caused incalculable damage to the communist cause. For one thing it precipitated a revulsion of feeling against Soviet intervention throughout the world and led to the disillusionment of many a Communist or Communist sympathizer. For another thing the revolution effectively smashed the myth of invincibility of totalitarian systems from within. It demonstrated the brittleness of the totalitarian control mechanism and the elemental strength of an aroused people.

As a consequence of the revolution, Hungary sustained fearful losses in manpower. Over 200,000 persons, most of them young, fled to escape reprisals against them. Additional thousands were deported to the Soviet Union. The internment camps of the Stalin era which were closed down during Imre Nagy's premiership have reopened. The number of people executed since 1956 has been estimated as high as 2,500.

Attempts by the United Nations to send on the spot observers to report on conditions have been steadfastly turned down by the Hungarian authorities. Similarly, a number of resolutions adopted by the United Nations General Assembly, which concerned itself with the case in a special

session in 1956 and again at its regular session in 1957, have been rejected by Hungary and by the Soviet Union on grounds that they constitute "interference in the domestic affairs" of Hungary. The resolutions have condemned Soviet intervention and called for the withdrawal of Soviet troops.

A United Nations Special Committee on the Problem of Hungary, established on Jan. 10, 1957, was charged with the duty of providing "the fullest and best available information regarding the situation created by the intervention of the Union of Soviet Socialist Republics, through its use of armed force and other means, in the internal affairs of Hungary, as well as regarding developments relating to the recommendations of the Assembly on this subject." The Committee issued a long detailed report on its findings, based on interrogations of refugees and study of the documentary record. The report goes far toward authenticating the genuine popular character of the uprising and condemning the suppression of the revolution by armed force. The special representative of the General Assembly, Prince Wan of Thailand, however, had no more success in contacting the Hungarian authorities than the United Nations Secretary General, Dag Hammarskjöld, when he sought to visit that country immediately after the revolution.

Poland

Of all the "satellites" Poland is in the most precarious position. Since October, 1956, the country has been governed by a communist leadership whose chief, Wladyslaw Gomulka, emerged from a communist prison to seize control in the Polish United Workers Party (Communist). He rose to power in a spectacular bloodless coup, against the objections of the Soviet leadership and in defiance of the threat of Russian military intervention. He won the support of the Polish people because he stood for national self-determination, democratic political reforms, and the restoration of the health of the economy, allowing for an improvement in living standards and continued industrial growth.

Under Gomulka—at first—the Polish people got a taste of freedom unheard of in a police state. They were relieved of constant harassment by the secret police. They could speak their minds freely without undue fear of repercussions. Artists and writers extricated themselves from the fetters of "socialist realism" and used their creative talents as they saw fit. The Roman Catholic Church regained a significant measure of freedom in administering

the religious needs of the people. Religious instruction was reintroduced in schools on a regular basis. The most pressing grievances of the workers were met by adjustments in wage scales and work norms. Administrative changes were introduced to decentralize the management of the economy. Forcible collectivization of agricultural holdings was ended.

To be sure, Poland remained a dictatorship ruled by a single party. But it was a far more benevolent dictatorship than any communist-run country in memory. The Communist Party by no means controlled all facets of life. Even in politics a degree of democracy was allowed to creep back. Splinter parties, such as the United Peasant Party and the Democratic Party, which had existed as meaningless puppets of the regime, experienced genuine revival. The Peasant Party in particular was making headway in the countryside. In elections in January, 1957, voters had a limited choice between candidates. The National Assembly, a unicameral legislative body, once again became the scene of serious exposition of government policy and debate. If its performance fell far short of the standards expected in a democracy, it also ceased being a rubber stamp. The officially sponsored communist youth organization (ZMP) disintegrated and in its stead a number of youth groups sprang up including some affiliated with the Catholic Church. The Scout movement was also revived. (The Association of Democratic Youth, however, was dissolved in the spring of 1957.)

A Privileged Status

Bowing to the inevitable in 1956, the Soviet leaders never fully acquiesced in the privileged status of Poland. They openly criticized the "excessive" liberalism of Gomulka's government and subjected it to steady political pressure to conform more closely to the dictates of the Soviet Union, to abandon dangerous experimentation with freedom and to assume its place as a regular member of the "socialist bloc."

However, Gomulka's own utterances and the measures taken by his government gave ample proof of the difficulties under which he operated. For one thing, on June 28, 1958, he felt it expedient, after a silence of some days, to voice cautious approval of the execution of Imre Nagy and his associates. Though his approval was couched in far more moderate terms than those of other communist chiefs (he merely acknowledged the seriousness of Nagy's crimes), it represented a painful departure from the genuine compassion expressed for Hungary's plight in 1956. It was a definite concession on Gomulka's part to Soviet insistence on a show of solidarity in this matter.

For another thing, a variety of moves by the authorities indicated retrenchment from extreme positions of freedom won by the people in 1956. Writers and artists once again met with serious censorship problems. The most outspoken critics of communism were strongly censured, though not yet threatened with imprisonment. (Publication of "Po Prostu," the most rebellious newspaper speaking for the youth of the country, was suspended as early as October, 1957.) Workers' Councils which belonged to the more radical innovations introduced after the overturn of October, 1956, were shorn of their authority to participate in management. They were again subordinated to communist-controlled unions. Tension between the Church and the government rose to high pitch. The government accused the Catholic hierarchy of abusing its freedom for political agitation against the regime. The Church retaliated, charging the government with invasion of religious sanctuaries and excessive censorship.

With the retreat from "October" the Polish people found plenty to grumble about. But the fact that they could still grumble at the top of their voices clearly distinguished them from their less fortunate neighbors.

The precariousness of the Polish situation derives from many causes, some external and some internal to Poland. A decisive element is the country's unhappy geographic position between two predatory neighbors. After World War II, Poland's frontiers were shifted westward, exposing the country to the new threats of reprisal by a resurgent Germany which could not acquiesce in the permanent loss of a large portion of traditionally German soil or blackmail by the Russians in case the Poles failed to heed Soviet wishes. Despite repeated assurances from the East about the permanence of the new frontiers (no such commitments have been made by the West) Poles cannot help being apprehensive about them.

Because of its unhappy geographic position Poland has been the victim of dismemberment by its stronger neighbors on a number of occasions. The last time was in 1939 when Hitler and Stalin agreed on carving up the country. The repeated vicissitudes suffered by the people through generations have nurtured a romantic nationalism which has found expression in part in an exaggerated myth of national greatness and in part in sporadic hopeless outburst against the oppressors. Preoccupation with national security was the hallmark of the Polish Republic after the nation regained its independence in 1918. Excessive attention to foreign policy and national defense stifled the growth of

democratic institutions. Economic progress was impeded because a high percentage of national income had to be diverted to defense production.

The problems of the present government are not substantially different from those of the past. The people dislike or hate the Germans and Russians in about equal proportion. Their experiences with the Soviet Union are more recent, but the imprint of the wartime period when Hitler's hordes all but annihilated the Poles living under their control is still vivid. Matters were not improved by the summary removal of about 7,000,000 Germans from the territory awarded to Poland in 1945.

In its foreign relations the Polish government has little leeway in making independent decisions. A complicating factor is the presence of Soviet troops in East Germany. So long as they remain there, Poland will have to contend with Soviet requests to maintain supply lines and secure these with adequate troops. This means indefinite stationing of Soviet troops on Polish territory. They are a constant menace to the stability of a Polish government.

Loans from U.S.

The most Gomulka's regime has been able to accomplish in pursuing an independent foreign policy is to initiate negotiations with the United States for modest short-term loans. Two loans of \$95,000,000 and \$98,000,000, respectively, were arranged in 1957 and 1958.

The present political situation borders on the absurd. Gomulka is top man, although he has no position in the government. He is a Communist of strong, if in some respects unorthodox, convictions. He enjoys a large degree of popular support. The party through which he seeks to administer the country is in thorough disrepute and the vital organizational machine of the party is still shot through with functionaries who neither like Gomulka nor agree with his program. His chosen instrument is therefore unsuited to aid him in governing efficiently. He must seek the cooperation of elements outside the party. This he gets, in part, from the more rebellious intellectuals and in more significant measure from the Catholic Church.

Years of persecution, if anything, increased Church influence among the Polish people, 98% of whom are Catholics. The leading Catholic prelate, Stefan Cardinal Wyszyński, was released from confinement coincidentally with Gomulka's rise to power. He had the foresight of throwing his personal prestige behind the Communist leader in October, 1956, to prevent a national rising against the Soviet Union

which would have meant certain bloodbath for all. The Cardinal has played an important role in bolstering Gomulka against possible collapse.

The two men have a common objective in staving off massive Soviet intervention in Polish domestic affairs. The Cardinal knows that the alternative to Gomulka is not greater freedom but more thorough oppression.

Expansion and Consumer Needs

Casting a dark shadow over the political scene are past economic policies and the country's continuing economic commitments to the communist orbit.

For years before 1956, economic expansion was pushed at breakneck speed. It required investments of up to a third of the national income, an exceedingly high rate for any country. As a consequence consumer needs went unattended. Worker productivity was depressed in the absence of adequate material incentives. Allocation of investments caused one sided economic growth. Heavy industry, especially the manufacture of steel, received high priority while other branches, such as home construction and agriculture were starved of funds. Insufficient mechanical improvement in agriculture, coupled with forced collectivization, resulted in a drop of agricultural production. Poland became a heavy importer of foodstuffs, including staples such as wheat. Compulsory exports until 1953, especially of coal, Poland's chief marketable raw material, to Russia at 1/12 of world prices robbed the country of possibilities of profitable trade and accumulation of convertible currency.

Since 1956, the government has been trying to alleviate the worst of economic evils. Given extensive destruction suffered during the war, when literally entire cities were destroyed, shortages of convertible currency and capital reserves, and the commodity structure of Polish foreign trade, the problems of economic rehabilitation are staggering. Investments have been cut back to an annual rate of about 15% of national income. Non-productive, wasteful projects have been scrapped. Poland is no longer usuriously exploited in its export of coal and other items to Russia. The prospect of meeting consumer wants, however, are not bright. The government has been able to offer only modest wage increases. At the same time, it has had to fight off inflationary tendencies caused by unrelenting demands from the workers for higher money wages. In agriculture while collectivization has stopped and most of the existing collective farms were disbanded, production has not risen sufficiently to allow the government to abolish the system of compulsory deliveries. But prices paid to farmers have been raised. Poland is still an importer of sizable

quantities of foodstuffs and of raw material, especially iron ore, on which its overextended industries depend. A three-year economic agreement with the Soviet Union, signed in February, 1958, calls for a 35% increase in trade between the two countries. With no early prospect of substantial improvement, workers and peasants, whose morale is low anyhow, must be exhorted to produce more, better, and at less cost for the sake of an uncertain future.

Amid conflicting aims and pressures from above (Moscow) and below (the Polish people) Gomulka treads an uneasy path, seeking to preserve communist supremacy in Poland, maintain close ties with the "socialist bloc" while at the same time resisting undue encroachments on national sovereignty and upholding the legacy of his own victory in October, 1956.

Rumania

Rumania occupies a strategic position in the Soviet empire. It borders on Hungary, Yugoslavia, and Bulgaria and is a handy gateway for Russian penetration of the southeastern portion of the European continent. Rumania derives additional importance from controlling a long navigable stretch as well as the mouth of the Danube River, the most important international waterway connecting the Black Sea with Central Europe. Finally, its oil deposits (near Ploest) make it an important source of supply of a commodity which is otherwise not abundant in that part of the world.

Once, perhaps, the most solidly anti-communist of all East European countries, Rumania has shown few of the signs of the unrest which have plagued Poland and Hungary. Initially, the weakness of the Rumanian Communists (they counted fewer than 500 adherents in 1944) as contrasted with the popularity of young King Michael and the strength of the Rumanian army which preserved much of its striking power as a result of a fortunately timed withdrawal from the war as an ally of Germany and Italy, necessitated forceful Soviet diplomatic intervention in order to promote local communist interest and establish Communists in advantageous positions. But even then, Rumania knew how to ingratiate itself to its former enemies. By switching sides successfully in August, 1944, it vastly facilitated the task of the Soviet troops advancing on the southern flank of German-held positions in Eastern Europe. Probably as a reward for this service, the peace treaty with Rumania concluded in 1947 restored Rumanian sovereignty over Transylvania—a disputed territory inhabited by a large

Hungarian population. Transylvania was first awarded to Rumania after World War I, but in 1940 it was reappportioned between the contending states by Hitler.

The communist conquest of Rumania was completed by the end of 1947, after the trial and imprisonment of outstanding opposition leaders such as Juliu Maniu and Ion Mihalache and the unceremonious expulsion from the country of King Michael. Since then the Communist Party has kept itself in power with remarkably few disturbances. Its leadership has been far less riddled by purges and show trials than any other satellite Communist Party. Not even Ana Pauker, the chief victim of purges which took place in 1952, was brought to trial. The very thinness of available communist replacements may account for the absence of violent upheavals in the Party's leadership. By the same token the precariousness of the Communist Party's position may be responsible for its relatively cautious policies which, though by no means easy to bear, have fallen far short of the massive attempt at large scale social transformation undertaken in Hungary and have also lacked the vicious terroristic character of communist rule practiced in that neighboring country.

The docility of the people and the absence of pronounced revisionist tendencies in the Workers' Party have stood the Rumanians in good stead with the present Soviet leadership. Some sources of irritation as the loss to the Soviet Union of the long disputed region of Bessarabia, remain. Soviet troops continue to be stationed on Rumanian soil, although their withdrawal in the foreseeable future has been announced. On the whole, however, Rumanian-Soviet relations are on even keel. Concessions won from the Russians (presumably for good behavior) in the form of economic assistance have helped to alleviate a number of chronic economic difficulties. If Rumania is not a shining example of Communist achievements and displays far less militancy in imitating and supporting the Soviet Union than East Germany or Czechoslovakia, it is not a hotbed of troubles either. It is an island of relative tranquility in an otherwise agitated part of the Soviet orbit.

Yugoslavia

On June 29, 1948, the Cominform expelled Josef Tito and his Yugoslav Communist Party for insubordination to the dictates of Moscow. Ten years later, Marshal Tito, first secretary of the Yugoslav Communist League (a name adopted in 1952) and head of state of the Federal Republic of Yugoslavia, was once again

under heavy fire from the Soviet Union and other communist lands, notably China, for alleged ideological heresies which impaired the unity of the entire socialist camp.

The latest round of acerbity was touched off by Tito's last-minute withdrawal from promised attendance in November, 1957, at the fortieth anniversary celebration of the Russian revolution. He was the only leading Communist not present. On instructions from him, his deputies refused to affix their signatures to a declaration subscribed to by all other Communist and Workers Parties of the socialist bloc. The declaration reasserted the supremacy of the Soviet Union and spelled out the permissible limit of freedom in choosing divergent paths to socialism in a way that would badly cramp Tito's style. Adding insult to injury the Yugoslav League of Communists in March, 1958, issued a lengthy doctrinal statement in the form of a program for their forthcoming Congress. The program itself contained nothing new. It was a summary restatement of what the Yugoslavs have said about socialism during the past ten years. But it packed a wallop because it presented what might pass for a separate doctrine in comprehensive form for the first time.

State visits by Soviet President K. Y. Voroshilov in Belgrade and by Tito in Warsaw have been called off. The Soviet Union has unilaterally proposed postponing for five years economic credits promised to Yugoslavia, valued at \$285,000,000. But there has been as yet no hint of a concerted war of nerves, of psychological warfare on a grand scale, of military pressure and thorough economic blockade against Yugoslavia. All these were weapons used by Stalin.

For Yugoslavia to knuckle under to Soviet demands would mean the loss of sovereignty which it had so stubbornly defended. For the Soviet Union to acquiesce in Yugoslavia's persistent refusal to "join the bloc" would be—as it already is—a humiliating psychological setback.

After all, it was Khrushchev together with the now cashiered Bulganin who ate humble pie in extending the hand of friendship to Tito after Stalin died. They traveled to Belgrade in what was widely interpreted as a voyage of penance in May, 1955.

Khrushchev and Bulganin invited him to go half-way in meeting them and joining the Communist family.

The Soviet leaders had every reason to expect that sooner or later Tito would relent and reconciliation would be complete, closing an important gap in the Communist-controlled ring of states in Europe.

Tito's Wary Role

Yugoslavia has played a wary role. Its first reaction to the Hungarian revolution which deplored Moscow intervention, its manifest encouragement of the Polish experiment, and its no-nonsense policy on interference in its domestic affairs coupled with steadfast insistence that its own path to "socialism"—quite different from the Soviet approved version in several respects—was as good as any other, could not but provoke the Soviet leaders. So long as Tito developed a brand of home-grown communism which stood the test of time, he would serve as a beacon for disgruntled and dissatisfied Communists to follow. He would thus effectively threaten the hierarchical structure of the "socialist bloc" and challenge the primacy of the Soviet Union in it.

Yugoslavia's stance toward the West can best be described as one of grateful but aloof appreciation of services rendered. There is no doubt that Tito owes his survival to adequate and timely Western assistance. The United States alone provided him with a total of about \$1,500,000,000 in aid, about half of it economic and half military. Yugoslavia continues to receive modest United States aid, but as of the fall of 1957, Tito renounced further military assistance, less for want of need than as a result of peevishness at Congressional prying. Tito accepted Western help eagerly when the going was tough and made no bones about their life-saving value.

But in return for vital support from the West he has not made any formal commitments for diplomatic, economic, or military cooperation with the West. Expectations of the British Laborites that he might veer toward a democratic type of socialism have been bitterly disappointed. Tito has let it be known that he is a Communist, if a self-styled one, who holds no brief for certain aspects of Western foreign policy and for Western type of democracy. In international councils—especially at the United Nations—he has let the chips fall where they may, voting with or against the Soviet bloc as was warranted by the occasion. In a general East-West conflict in which Yugoslavia was not directly attacked there is no telling how his troops would be engaged.

Studied Neutrality

Under the circumstances the major positive foreign policy plank of Tito's government is studied neutrality. Tito is an ardent advocate of peace and an equally ardent opponent of military blocs. He perceives the best guarantee of stability for his regime in a world order that would make no demands on him to choose sides.

Titto has made contact with like-minded leaders of Arab and Asian countries. His wide ranging diplomatic journeys have taken him as far as India and Burma with a stopover at Egypt. He in turn has been visited by Nehru, Nasser, and other lesser potentates.

Titto was installed in full command of his country sooner than any other Communist in Eastern Europe. What is more important, he achieved his goals without Soviet assistance. The type of regime he established earned him no additional popularity. Between 1945 and 1948, when the break with the Cominform came, Yugoslavia was a model communist satellite. It made more rapid headway toward "communization" under a ruthless totalitarian leadership than any other East European country. The disagreements with Stalin concerned purely internal, communist matters. Stalin, ever distrustful of foreign Communists, wished to infiltrate Tito's Party and subordinate it as well as its policies to direct dictation from Moscow. Tito demurred. The discipline and loyalty of the party, the police, and the army made this possible. The absence of Soviet troops from Yugoslav soil helped. The existence of a territorial buffer between Yugoslavia and the Soviet Union in the form of other satellites was also useful.

Changes in National Program

As Yugoslavia became a beleaguered country, Tito's stock as a national leader again began to rise. He himself was forced to relent from the rigorous program of political and economic transformation which had been mapped out. Accommodation with the people was an indispensable prerequisite for the survival of his regime. Little by little, acting pragmatically rather than on dogmatic principle, the terms of adjustment were worked out. This is not to say that the peoples of Yugoslavia (for it is a multi-national country) won meaningful political freedom. The area of freedom never approximated what the Poles experienced after 1956. Yugoslavia is still a one-party state in which monopoly of power is exercised by a handful of men. The Communist League, the Federal executive and the legislative, as well as the administrations of the six Federal republics are run by an interlocking directorate consisting of no more than about a dozen persons. In elections to the Federal People's Assembly in the spring of 1958, 306 candidates, picked by the communist front "socialist alliance of the working people," competed for 301 seats. The choice before the voter was not exactly wide. Witness to the sensitivity of Tito's government to criticism is borne by the imprisonment of Milovan Djilas, a leading figure in Party councils before he became disillusioned

and denounced the practices of the "new class" of communist rulers. Recent trials of socialist professors also attest to the regime's determination not to brook political competition. But under the surface of official controls, traditional values and patterns of life remain largely undisturbed. The chief exception is the curtailment of the activities of the church. For the rest, the population is spared many of the "amenities" characteristic of totalitarian states, ranging from acute persecution by the police to incessant exposure to political indoctrination. Away from the centers of government, life goes on pretty much undisturbed.

It is in the economic realm that the government has made the most far reaching concessions. Right now, the general economic situation is more promising than it has been for a long time. After the break with the Cominform, Tito had to abandon his program of industrialization, which was overambitious. While it was under blockade, the Yugoslav economy could barely hold its own, even with Western aid. Living standards did not rise, but far-reaching adjustments in economic management took place. Their combined effect was to decentralize the economy, introduce an element of competitiveness into it and allow workers a measure of representation through workers' councils in the factories. Similarly, collectivization was suspended. Cooperative farming is still the goal of the authorities, but when that goal will be implemented no one knows and few people talk about it. With the alleviation in conditions after 1953 as a result of loans from communist countries and the restoration of normal trading with them, the Yugoslav economy received a much needed fillip. In the spring of 1958 in pre-election speeches and in his address to the Congress of the Communist League Tito was able to cite cheerful figures of economic growth covering 1953-1957. Postponement of the Soviet credit, which was originally arranged in 1956, will mean, among other things, abandonment of a huge aluminum processing plant, a pet project of the government. It is, however, not likely to have far reaching effects on the economy in general.

The overall internal situation thus appears stable. Tito was re-elected to the presidency of the Federal Executive Council in April, 1958, and was reappointed first secretary of the Communist League at its Congress in the same month. There is no question of his personal domination and of the security of his position. This, of course, does not mean that he and his regime enjoy the undivided support of the vast majority of the people. The people of Yugoslavia are no more inclined to support communism than any other na-

tion. There is also a continuing if negligible opposition to him within the Communist League. It consists of those who side with the Russians on the ideological questions under dispute. The revival of skirmishing led to the round-up of a hundred or more "Cominform sympathizers" while a smaller group escaped across the frontier to Albania. No violent change in conditions, however, is imminent either as a result of popular discontent or subversive machinations by opposition Communists. The communist leadership is tightly knit.

It has been the most stable of all Communist Parties, including the Soviet, for more than a decade.

So long as Tito remains at the helm, the direction of Yugoslavia's policies appears to be set. As matters stand, in the struggle with the Soviet Union, Tito is more than holding his own. If he rejoins the camp it will be on his terms. His country, an insignificant power in terms of population, size, and resources, is a factor to be reckoned with in satellite Europe.

UNITED KINGDOM

By

WALTER JAMES

Editor, *The Times Educational Supplement*, London

INTERVENTION in Lebanon and Jordan in 1958 saw Britain and the United States marching in step. There were plenty in Britain to say that the demonstration of armed might showed a total misunderstanding of the situation and alienated Arabs who wanted no more than to run their own affairs profitably without commitment to East or West. But the majority were happy that the West was acting together in an area which contains oil reserves, whose free use is vital to Britain and Europe. The passions of Suez (1956) had died away. Then, many in the Conservative Party and in the general body of the people (who did not share the Labour Party's Confidence in the United Nations) felt betrayed by America. The Suez stroke was delivered in the confidence that once it was started, America would join in. She did not, and the bitterness was great.

But the cease-fire was owed more to the refusal of American support than to respect for United Nations resolutions or Russian threats. The sense of the need to walk in step with the United States is now very great in Britain. At Washington, in October, 1957, when the Suez hatchet was buried, Prime Minister Harold Macmillan signed the Declaration of Common Purpose with the United States. In the next year, at De Pauw University, he called that declaration "a blueprint for interdependence." This interdependence does not come easily to the British. The role of junior partner is hard to learn. Yet the lesson is driven home constantly by the facts of Russian power.

There are forces in Britain who would prefer to see the country leading a third and middle power of United Europe, a combination of highly developed and technically proficient nations who could deal

on equal terms both with the United States and with the U.S.S.R. These forces are few. In the first place, the old rivals in Europe are not united and find unity difficult to create. In the second, Britain's Commonwealth connections, and long traditions of sea power and foreign trade, have influenced her against European entanglements. It is de Gaulle's France, not Britain, which is tempted towards the leadership of an independent Europe, and the creation of a Middle Power.

Trouble in the Family

Although Britain's basic interests incline her persistently towards America, it is a love-hate relationship. There is a feeling of kinship, but family relationships are notoriously difficult. The common language is probably a more powerful bond than either side would think of acknowledging. But it is the regular failure of British and American interests and policies to coincide which places the greatest strain on an instinctive friendship. Middle Eastern oil means everything to Britain, less to America. The United States refusal to recognize Red China appears in Britain as little better than a breakdown in logic. Yet it is absolutely true to say that a British desertion of the American alliance is inconceivable. The alliance is a cornerstone of British policy. This is as axiomatic with Labour as it is with the Conservatives. Aneurin Bevan himself has said so.

But essential to Britain though the alliance is, it cannot rule out all differences. Even on the major fact of world policy, the cleft between Russia and the West, the lines are a little crossed. All parties in Britain, and Labour as strongly as any, are revolted by Soviet practice—

Hungary, 1956, is never going to be forgotten. But Marxist theory, or socialism, is less feared in Britain, and while leftist intellectuals will admit American tolerance and freedom, they find it hard to swallow that the leading Western nation should be whole-heartedly the home of private enterprise and capitalism. Doctrinaire socialism counts for less in Britain, even in the Labour Party, than much public discussion would suggest. Yet the respectability of socialist theory within its shores makes it easier for Britain as a whole to believe that one day, at the summit or by other means, some understanding with the U.S.S.R. is possible.

British interests are still worldwide and they do not everywhere coincide with America's. That was one thing proved by Suez. So Britain's defense, though seen as geared to America's under the North Atlantic Treaty Organization, is also still conceived independently. Bases like Cyprus, torn between Greek and Turk; Malta with its economic weakness; Aden, with its closing circle of Arab nationalism; Kenya, with responsibility from Central Africa to the Persian Gulf; Singapore and Hong Kong, all make their claims on slender resources. It is a system wide open to the drain of constant small troubles which once they arise are fanned by the scouts of world communism. It is the requirements of small police operations and old-fashioned petty wars across the globe that arm the critics of Britain's defense policy.

The Rising Cost of Duty

The nation is intensely conscious of two things—great and world-wide responsibilities and the increased expense of discharging them. It is a bit like some old nobleman still seeking to live in state in his castle, and discharge the duties of his position, with the rents of his estates no longer what they were. Britain has clung to the position of a Great Power and the weapons that go with it. An ultimate independence, proper to a Great Power, is accepted as necessary by all political parties. Even Aneurin Bevan, once sharply opposed to Britain's possession of the ultimate weapons, after he had been designated Labour's future Foreign Secretary, told the assembled Party in 1957 that Britain's representative, without the hydrogen bomb, would enter "naked" into the international council chamber.

The small but active Liberal Party and a vocal minority of the Labour Party wish to see unilateral renunciation of the hydrogen bomb. They are impressed by Bertrand Russell's prophecies of world sui-

cide, by the genetic dangers of radiation rising from bomb tests, and by the not unfounded fear that in any nuclear world war the United Kingdom, a small and crowded outpost, would be annihilated in the first hours. Behind these views is a judgment, widely held in the churches, that nuclear weapons are morally indefensible.

Strong though such feelings are, it can be said that the majority in Britain take some satisfaction in belonging to the atomic club. Back of this satisfaction lurks the sense that the United Kingdom is not as interdependent with the United States as politicians publicly announce. The possession of the bomb is a kind of insurance policy. The fact that the bomb is held by Britain and could in the last resort be independently loosed by her, provoking almost certainly a world war thereby, does supply an argument to America that closely agreed policies are desirable. No one can say what the future will be or the relative strengths of the Powers, and it is at least possible to imagine a situation in which America was unable or unwilling to intervene, when Britain had only her own deterrent resources between her and a fate similar to Hungary's. Quite apart from such gloomy forebodings, many of those most impressed by the moral case against the bomb are unable to square a British renunciation of it with the continuance of an alliance with an America whose world strength is founded largely on its possession.

There are, however, powerful arguments from the very fact of that alliance against British development of a nuclear arsenal. As in all other spheres, Britain's defense policy is constrained by limited finance. Defense absorbs about a tenth of the gross national product; it involves an expenditure of foreign exchange equal to the proceeds of all the aircraft, aero-engines, electrical machinery, and locomotives exported. A great part of the defense budget goes in the nuclear weapon program and its associated activities. Some of those most committed to the American alliance will say that its very existence makes such duplication of effort futile. The British are unlikely, this argument runs, ever to be engaged in a nuclear war except at America's side; in such an event America will possess all the weapons necessary—enough, in that sort of war, is enough—as President Eisenhower has remarked. It would be far wiser for Britain, and far more useful to the alliance, for her to concentrate on mobile conventional forces, which are what she really will need for the small, regular, and far-flung operations likely to fall to her lot.

Economy Program

The economizing five-year defense program launched in 1957 provides for ending the call-up to the services in 1960 and a smaller regular army of 165,000 men. Fears are that an army of that size will be insufficient for Britain's NATO obligations to maintain forces in Europe and also to protect her many interests overseas. In other words, these critics argue, Britain would be well-advised to make her economies in the nuclear program, trust to America for that form of defense, and use the funds released to expand her conventional forces. The debate in Britain on defense policy is still unresolved. There are critics of the present cut-down of conventional forces in the Government's own ranks, and while Labour remains officially committed to a nuclear effort, the party contains many who would seize the first opportunity for dropping it.

Any discussion of British defense policy drives home the fact that being a Great Power in these days is an expensive business. The recurrent inflationary crises merely illustrate the strain, in which defense is only one factor, the whole economy undergoes to uphold the panoply of greatness. It is doubtful whether many in Britain realize the strain. There is some sense, increased by the ill-luck of the Suez adventure, that the Great Power of the present is somewhat reduced from the Great Power of the past. But the deep popular support given to Anthony Eden showed the nation had still a taste for the bold deeds associated with sovereign independence.

There are no signs at all of general willingness to lay down freely any of the burdens of a state expecting to play a leading part in the world. It is no light matter, for instance, to stay the banker of the sterling area. That determination bulks large in every crisis of the pound. Some economists have argued that running the financial business of the sterling area is no more than an inherited habit without any current profitability. Yet the British instinct is still that it pays a trading nation to manage one of the great trading currencies, even if it is sometimes a burden.

Colonial Development

Likewise in private overseas investment. This currently represents over 1% of the national income, against the United States' less than one-quarter of 1%. The British Government has also made available to her dependencies £230 million up to 1960 under the Colonial Development Acts and £100 million under the Colonial Development Corporation. It occurs to

few to question the propriety of investing such large sums abroad when the home economy is tight. In fact the extreme Left, professedly most contemptuous of all Great Power trappings and pretensions, is highly critical of the Conservative Government for not spending more on colonial development. Thus ingrained are the habits of a great nation's lifetime. Nowadays too, of course, the whole cost of the Welfare State must be added to the bill. It is a lot to carry.

When Mr. Macmillan said in 1957 that most people "have never had it so good," he was telling the truth. The working people in Britain enjoy nearly full employment and most of them have larger pay packets than ever before. The gadgets of comfort—ice-boxes, washing machines, motor cars, television sets—are almost as common in working-class as they are in middle-class families. On top of what wages will buy, there lie all the benefits of the Welfare State, which guarantees a livable minimum from the cradle to the grave. If Britain, perhaps, provides more generous amounts of free education and health services than other advanced European countries, she offers less in social security. Nevertheless, with pensions for the retired, payments for the sick and unemployed, allowances for children, the pinch of want is never allowed to be felt. But the cost is enormous. For the benefits, every working man and woman pays weekly contributions. These cover, however, only a fraction of the cost. When the National Health Service started in 1948, the gross cost was estimated at £175 million. This year (1959), it will be £740 million, of which the Government has to find £553 million. By the end of the 1970's, it is calculated that the National Insurance Fund's expenditure will be just about twice its income, because of the great increase in the retired population on pension.

The maintenance of a high standard of living, and the welfare apparatus to prevent anyone from falling off that standard, hangs on one thing only—the successful export of manufactured goods. Let that fail and everything fails. France could lose all her foreign trade, pull in her belt, and live off the fat of her broad agricultural acres. But English acres are too few for that. "Export or die" has been the slogan since the war.

Napoleon was Right

Napoleon's sneer that the English were a nation of shopkeepers has been literally true only since World War II. There are no reserves of any size—nothing to tide over any severe recession. Everything that Britain stands for—her western defense

contribution, her leadership of the Commonwealth, her full employment and welfare services at home—hangs on day-to-day trade. She walks precariously along a tight-rope as she has never had to do to this extent before.

In 1913, 30% of the cost of her imports was covered by net income from foreign investments. In 1933, the figure was still 20%. But in 1953, after the wholesale selling and loss of foreign investments in the war, net income from investments abroad paid for 3% only of imports. It was 2.7% in 1957; the drain has not stopped. This fact explains the deadly seriousness with which Britain faces each new threat to the remaining investments in the Middle Eastern oil installations.

Britain has thrown herself heart and soul into the export business. She was enabled to get it going again after the war by large loans from the United States—a helping hand not forgotten and still a powerful element in the basic strength of the alliance. By 1956, she had doubled her pre-war volume of exports, and raised the proportion of engineering goods to over half the total. She is concentrating on the development of new products and new industries—electronics, petrochemicals, plastics, and synthetic fibers. Out of the 1,157 turbine-powered airliners on firm order throughout the world in July, 1958, the British share was 550 or 47.5%. It is the export of machines that pays best, the more scientifically advanced the better.

For this reason, Britain has taken up the cause of scientific education in a big way. Before the war, the drive towards educational reform was left very much in the hands of the left-wing parties. Education was then seen mainly as a civilizing influence, and the extension of its opportunities to the lower classes was viewed as a stage in their social emancipation. Since the war, education—for which read "scientific education"—has become more and more vocationally conceived. It would be extremely difficult to prove that the Conservatives are less ready to spend money on education today than the Labour Party. But one believes that many of them back a "big education" policy much as they backed a "big Navy" policy before World War I. Their instincts of course, are entirely sound. Britain's survival depends on the successful export of scientifically designed machines, and so very great sums have been spent on fostering scientific education.

Even British industry took a hand with the schools in 1955 and raised over £3 million for laboratories and equipment to increase the output by 50% of young scientists from the public schools (independent, mainly boarding and fee-paying—in

America they would be called private schools). Under the Education Act of 1944 the compulsory age of schooling was raised to 15 in 1947, but nothing stops a boy of talent from staying on at school, free, until 18 and then going on to college or university. The pre-war university population has been doubled, and growth continues. But it is not considered that the universities can produce enough scientists and engineers and so in 1957 the Conservative Government began a great expansion of the technical colleges, with the aim of pushing at least ten of them up to university level. M.I.T. and Caltech are magic words of inspiration in Britain at the moment.

Changes in Attitudes

This expansion of scientific education and training is one of the most significant trends inside Britain. Traditional British culture has always been based on the arts; the sciences were not regarded as a study suitable for gentlemen, except a few mad eccentrics, and engineers were classed scarcely higher than plumbers. All these attitudes have fallen to bits in the last decade. The arts are in full retreat, and over 60% of boys in the upper forms of English high schools are concentrating on mathematics, physics, and chemistry (roughly these subjects occupy two-thirds of the time-table from 15–18).

The highly trained products of scientific education are needed to man a big program of industrial development. Since 1955, an optimistic year, a considerable amount of capital investment has been taking place. New factories have sprung up for heavy electrical engineering and chemicals. Terylene, silicones, petrochemicals, titanium dioxide, and transistors are examples of new products. Transfer machines in engineering and electronically controlled machine-tools are among the new processes. Alongside this activity there are vast schemes for atomic power stations, of which four are building, modernizing the railways, and mines, raising a new crop of schools, hospitals, and houses. The activity after 1955 was immense; but the engine was beginning to race.

In 1957, the brakes had to be applied. The crisis was typical. Let it stand for several since the war. It was no worse than overcame the Labour Government in 1949, when the pound was devalued. In May, 1957, the gold and dollar reserves rose; they were as high as they had been for a year. They rose still higher in June. Then in July there was a slight fall, and as the month drew on it sharpened, and by August had become catastrophic. Rumors of another devaluation of the pound were rife: Europe had lost faith in sterling. All

at once the emergency brakes were applied. Credit was restricted and the bank rate raised to 7%, the highest it had been since 1921. The Government decreed a standstill on public and private investment. Power stations, railway modernization, and school building were all abruptly slowed down. The expansionist program ground to a stop. Twelve months later the wheels were turning again. The gold and dollar reserves were marvellously improved. In fact, by the end of 1958, to curb a small growth in unemployment, the Government were easing credit and encouraging people to have a spending spree financed by bank overdraft suddenly made ridiculously easy.

Thus 1957-58 illustrates perfectly the tightrope character of Britain's postwar economic life. Industrial development, leadership of the sterling area, and everything else hangs on a stable pound. Britain's expansionist policies, supported by and themselves encouraging a persistent, feverish inflation, lead regularly to domestic over-consumption. Imports are sucked in and overbalance exports, and another crisis of the pound is made.

Part of the drag of over-consumption springs inexorably from full employment, which has immensely strengthened the bargaining power of organized labor. The inflationary tendency of wages to rise faster than productivity has been a constant problem to post-war governments. Wage policies are forever being discussed but never applied. The right of trade unions to bargain freely for whatever wages they can get is today virtually a clause in Britain's unwritten constitution. The five-week strike of London's red buses in 1958, was a deliberate challenge by the Transport and General Workers' Union to a Government which was using its influence over a nationalized industry to restrain a general rise in wages. The strike was defeated, but at the Trade Union Congress held later in the year, the unions voted as firmly as ever against any policy of wage restraint. The virtual impossibility of curbing excessive wage demands in a fully employed, expansionist and free economy, accounts for a great part of the financial difficulties of successive British Governments.

Stimulus in Crises

The recurrent crises, the perpetual walking of the tightrope, is a stimulus. Inside itself, few nations can be more self-critical than the British. Government, industry, and press are all obsessed with keeping favorable the delicate balance between incomings and outgoings. That British industry should be inefficient here, or backward there, is immediately seized upon

and trumpeted up and down. At one moment the public is warned of the dangers of producing too few scientists. At the next, the argument has switched to the deficiencies of British salesmen. "How can we trade better?" The obsessive question is always to the fore. It induces an unwonted flexibility of approach.

This emphasis on efficient shopkeeping is something new in Britain. It has its bad effects as well as good. On the face of it, the country goes about its old mission in the world. Former colonies grow up and are released into independence—as were Malaya and Ghana in 1957. Homes and work are found for the refugees from oppression—as for the Hungarians in 1956. Education is improved and the universities expanded. But there is no doubt that the rigors of the tightrope-walk do have a spreading materialistic influence. The persistent inflation is demoralizing. Families who in the past had small reason to think of life in money terms are forced to do so now by high taxation and death duties on inherited wealth. Rising prices combined with the bargaining power conferred by full employment drive trade unions to press for sectional rises in wages, no matter what the harm to the national economy as a whole. The fascination of the monetary rat-race is strong. The pull of idealism is weaker. In Nottingham and London in 1958 there were racial riots—colored people mainly from the West Indies were attacked in the streets. Yet there is no deep-rooted feeling about color in Britain. Many saw in these demonstrations no more than a nasty outburst of brutality among young people, Teddy Boys, whose minds had been left empty of a cause and a hope by life in modern Britain and who for that reason sprang to indulge themselves, and release their frustrations, in a modern equivalent of bear-baiting.

Nations do not live by bread alone, and Britain's necessary concentration on the sheer business of earning her living may be leaving the imaginations of her young people unfired. In the 1930's, there seemed to be no question that British power, if rightly directed, could be a great influence for good in the world; Nazism and Fascism threatened from Germany, Italy, and Spain, and the young felt they knew what ought to be done. The plight of the unemployed and the poverty of lower-paid workers were a standing challenge to social reform. Since the war, Britain's power to lead in the world seems dwarfed beside the giant antagonism between the United States and the U.S.S.R., and the completion of a great program of social reform, which is almost more than Britain can anyway afford, leaves little

scope to the idealistic politician. These facts partly account for the political apathy which is marked among British students at present, and indeed in the population as a whole.

Conservative Strength

In the autumn of 1958, Conservative Governments had been in office since 1951. They had pursued unpopular economic policies and suffered the enormous reverse at Suez, as well as the perpetual irritations of Cyprus. Yet public opinion polls showed the Government still slightly ahead of Labour. This was extraordinary. It seemed to contradict the law of the pendulum in British politics. It certainly showed the current lack of attractiveness of the Labour Party.

Political dynamite has gone out of reform simply because so much reform has been accomplished. While Labour aims at re-nationalizing steel and road transport, it has cut down on tendencies to nationalize everything. There is a scheme for the Government buying shares in private companies, with the objective of extending public ownership minus public control. But nationalization is less popular than it was, even with Labour supporters. Trade unions have found nationalized boards, with Government backing, can be tougher than private boards. Ordinarily hopeful men and women do not see in nationalized industries those better relations between managers and men that the Socialist zealots promised. Labour is also trying to interest the electorate in a national super-annuation scheme with pensions graded according to past earnings, and in comprehensive high schools of American type in place of the existing selective secondary system.

By late 1958 anyhow, the electorate was not beginning to bite. In fact, neither of the main parties aroused much enthusiasm—which accounts for the revival of interest in the now diminutive Liberal Party. When Asquith's grandson, Mark Bonham Carter, won a Devon seat from

the Conservatives in March, 1958, it was the first Liberal gain in years. The draw of the Liberal Party, which must not be exaggerated, consists in its freedom from ties with the two main interests behind British politics. Many thinking voters deplore the identification of the Conservatives with the owning and managerial classes, with organized labor ganged up politically on the other side. But the Liberals with no strong interest backing—their moral advantage and political disadvantage—have a long way to go to the top; the British voting system is unkind to third parties.

With politicians seemingly barren of inspiration, and the corrupting inflation driving all classes to be on the make all the time, Britain might appear to be slipping into a materialistic morass with no higher ideal than to maintain the standard of living. Partly true though it is, such a judgment does not give the whole picture. There is a deep love of the country and its past. More lies behind the obsession with science, technology, and trade than the mere wish to make accounts balance and see that everyone gets their expected slice of the national cake. There is also the finer wish to maintain a nation, whose hills and fields, cricket and racing enter into a pattern of life which all classes understand and enjoy together. Few peoples are more class conscious, yet no community is less divided. A leading trade unionist will sit down at a City banquet beside a Lord Justice of Appeal and both find enough of English life in common to enjoy talk over the wine. The factions quarrel over the economic spoils, but faced with a threat from outside will agree that the domestic devil is infinitely to be preferred to foreign friend or foe.

Britain is no longer the arbiter of the world she used to be. But the knotty strength is still there, underrated as it always is outside. The truth is that Britain is a community closely woven over the years, where religious or political differences cause no more than ripples on the surface and the basic instinct is to stand together against all comers.

COMMONWEALTH OF NATIONS

B4

C. HARTLEY GRATTAN

*Author of *Introducing Australia, Australia (U. N. series), etc.**

THE COMMONWEALTH OF NATIONS, also frequently called the *British Commonwealth* and occasionally the *British Commonwealth and Empire*, is an asso-

ciation of ten nations, all former colonies, or federations of colonies, of the United Kingdom of Great Britain and North Ireland. The ten associated nations are Can-

ada, New Zealand, Australia, the Union of South Africa, Malaya, Ceylon, India, Pakistan, Ghana, and the United Kingdom. It is usual to speak of the group as consisting of the United Kingdom and the overseas associates, but it must be kept in mind that the United Kingdom is nevertheless simply the first among equals. Future accessions to the association, like those of the past, are to be expected from among British colonies which may achieve autonomy, like Nigeria, the Federation of Central Africa, or the Federation of the West Indies.

While the Commonwealth is quite different and separate from the Empire, the Commonwealth grew out of the Empire and the Empire still survives. Hence the occasional use of the term, Commonwealth and Empire. The Empire today consists largely but not quite wholly of the colonial dependencies of the United Kingdom. Australia and New Zealand have dependencies which are properly to be called colonies. But it is the United Kingdom's colonies which are chiefly in question when the British Empire is mentioned.

As is well-known, by far the larger part of the British Empire today is in Africa, but British dependencies are also to be found in the Far East, the Mediterranean, the Caribbean, the Western Pacific, the Atlantic Ocean, and the Indian Ocean. Many of them will be mentioned in the articles on these portions of the world. In regard to the relation of the colonies to the Commonwealth, the point should be made that while the United Kingdom has unimpeded tutelage of the colonies, and by policy seeks to bring them forward to self-government and autonomy, she cannot confer Commonwealth membership upon them. They must, when finally autonomous, voluntarily ask for admission to the association; and acceptance depends upon the consent of the members of the Commonwealth.

The Commonwealth of Nations is, then, a peculiarly British political invention, a way of bringing into special association nations recognized in international law as independent countries. The association has the loosest of structures, based wholly upon conventions derived from past practices which are subject to change to accommodate to circumstances, rather than upon any written constitution. There is not and never has been a written constitution; and consequently there has also never been any centralizing organizational structure, like a special secretariat, for running the group. The relations of the members to one another and to the outside world are determined by the members individually and insofar as they share a common attitude or policy it finds expres-

sion only through voluntary consultation and cooperation.

A British Invention

The Commonwealth is, therefore, an association without a "common voice," a fact which contributes a great deal to making it a mysterious and elusive entity to the outside world. The integrative symbol of association is The Crown, the constitutional apex of the British system of government, or a legal concept to be distinguished from the king or queen who may temporarily be the wearer of the crown, or the occupant of the office of which the crown is the formal badge. All members of the Commonwealth, regardless of whether they are republics or monarchies, accept Queen Elizabeth II as "Head of the Commonwealth," and that phrase was in 1952 incorporated into her official title. Acknowledgment of Queen Elizabeth as Head of the Commonwealth does not, of course, give her any role whatever in the domestic affairs of the members—if they are monarchies they provide separately for this; and, indeed, the Queen has not any very visible role to play in conduct of Commonwealth relations. She is a symbol and a symbol only.

At the present time the United Kingdom, Canada, New Zealand, Australia, South Africa, Ceylon, Malaya and Ghana are monarchies, while India and Pakistan are republics. However, it can be stated that only the United Kingdom, Canada, New Zealand and Australia are firmly wedded to the monarchical principle. It can be anticipated that Ceylon will soon become a republic and sentiment for a republic is a force in South African politics. Malaya, which gained its freedom only on August 31, 1957, is likely to continue as a monarchy, with a royal personage, a rajah, as chief of state. Sentiment in Ghana is unclear. When Commonwealth members are monarchies they share a monarch in common. Elizabeth II is, then, Queen of the United Kingdom, of Canada, of Australia, and so on, and each has a separate legal definition of her Royal Style and Titles in relation to itself.

To perform the functions of the monarch in the countries where he or she is not normally in residence, a vice-regal personage called a Governor-General is appointed, with the advice and consent of the government concerned. A Governor-General can be either a citizen of the United Kingdom, a noble lord or a person without title, or a citizen of the recipient country. Thus, Australians have been Governors-General of Australia, South Africans of South Africa, and a Canadian of Canada. A Governor-General performs those functions which the Queen herself

performs in the United Kingdom, no more no less. When the Queen is visiting the country she performs the functions herself.

A Variety of Views

It might be argued that the countries which are monarchies are more intimately associated in the Commonwealth than those which are republics, but such a generalization would be subject to many qualifications and probably is meaningless. The views entertained of the Commonwealth vary a great deal from member to member and amongst equally significant citizens of each member. One can say, very roughly indeed, that there is an Australian view of the Commonwealth, an Indian view, and so on, but this obscures the significant differences between individual spokesmen, whether leaders of political parties, professors, or private citizens. Writers on the Commonwealth have a dangerous tendency to resemble the blind man and the elephant in the famous story. However, there is an elephant!

The forces which have created the contemporary Commonwealth have involved a large transfer of governmental authority from the Imperial center, the United Kingdom, to the associate members. The history of the Commonwealth is in large measure an account of such transfers and the reasons for them. Obviously, as the associates have waxed in power, the ties binding them to the United Kingdom have been weakened insofar as the ties were founded on authority. There has been a steady shift from the ties of legal authority to the ties of sentiment and as, in some cases, the latter ties are not entirely conspicuous, the question arises as to what holds the Commonwealth together. There is a body of thought, indeed, largely localized in Australia, New Zealand, and the United Kingdom, that feels rather strongly that the ties have become so tenuous, all things considered, that disintegration of the Commonwealth, or at least the departure of members from it, is an uncomfortably real possibility. At present, however, the balance of forces seems to favor the continuance as members of all the present associates. Historically only the Irish have left the Commonwealth after being in it and only the Burmese elected, on gaining autonomy, not to ask for membership.

Before World War II, it was possible to make some play with the ties of kinship as the cement of the Commonwealth, especially when referring to nations like Australia and New Zealand. This was a rather less forceful argument with regard to Canada and South Africa, with their articulate non-British peoples, respectively

the French-Canadians and the Boers. When the Asian colonies became autonomous and joined the Commonwealth the kinship argument looked rather ridiculous; and when Ghana joined it was obviously wholly irrelevant. Now it is necessary to argue that the Commonwealth is a valuable association because it transcends racial divisions, but this alleged virtue is under a severe test, as we shall see.

More emphasis has lately been given to another proposition: that the British have managed, as much by accident as design, to plant their version of democratic parliamentary government, and the accompanying institutions and practices, as well as the personal and social ideals which support them, throughout the imperial domain. Therefore we find that today the associated Commonwealth nations are all strongly committed to them. This close political similarity is clearly an integrative factor of great significance and its survival into the future is of central importance to the health of the Commonwealth. Any deviations from it will cause great alarm. Hence, for example, the anxiety about India's capacity to solve its social problems under democratic procedures.

No Centralized Machinery

The Commonwealth is sustained, perhaps, by force of common identification of purpose but it is maintained by consultation and cooperation. It has no centralizing machinery of a permanent and directive kind. All coercion is absent. There is nothing that must be done on peril of expulsion—there is no provision or precedent for expulsion, though the right of secession exists. Consultation and cooperation are all.

Consultation is continuous through intra-Commonwealth diplomatic channels. To facilitate maintenance of good relations, the associates exchange High Commissioners who, in status, are comparable to ambassadors. A High Commissioner is the representative of a government; he is not to be confused with a Governor-General, who represents the sovereign.

Of the occasional informal meetings for consultation, by far the most significant since 1939 has been the meetings of the Prime Ministers of the Commonwealth. By tradition no agenda is prepared for these conferences and in theory the posture of Commonwealth and world affairs determines what is discussed. Any Prime Minister may introduce any subject that concerns him. No votes are taken. The meetings are in the nature of "discussion groups" in which the Prime Minister's exchange views, but each must make his own version of the consensus and deter-

mine what use he will make of his conclusions when he gets home. He and, above all, his government are committed to nothing by attendance at the conference. A conference always ends with a formal communique, but it is rarely an illuminating document. The meetings receive little attention in the American press, and less comment. Few Americans know much about Commonwealth affairs.

Cabinet Ministers of lesser rank also hold meetings similarly managed to those of their chiefs, but rather sporadically. Finance ministers, foreign affairs ministers, ministers of trade, and so on meet to discuss common problems. Unlike the Prime Ministers, who can range where they will, the lesser Cabinet members stick close to their respective lasts, but occasionally a major policy is developed by them, as the Colombo Plan emerged from a meeting of finance ministers. An important meeting of this kind was held in Canada in September, 1958, to discuss intra- and extra-Commonwealth trade. The foreign ministers of Commonwealth countries occasionally meet for informal discussion at sessions of the United Nations; or comparable meetings may be held by the Permanent Representatives to the United Nations. Commonwealth High Commissioners are normally in touch with one another in the capitals at which they are posted and the High Commissioners in London regularly meet for discussions amongst themselves and with members of the United Kingdom cabinet. Commonwealth diplomatic representatives—ambassadors and 'ministers—consult with one another in foreign capitals, for example, Washington, D. C.

No Single Voice

In no instance do these consultations result in the Commonwealth speaking in a "single voice" on any subject whatever. The "single voice" theory of the Commonwealth is dead.

Cooperation here refers to joining together for the execution of specific tasks of importance to the association, the usual vehicle being the committee. Some committees deal with high policy questions, some do not, but all are concerned with matters that interest or involve more than a single associate. There is a Commonwealth Advisory Committee on Defense Science, a Commonwealth Scientific Conference, a series of Committees on transport and communications, an agricultural bureau, an Institute of Entomology, one in Mycology, one in Forestry, a Scientific Liaison Office. Some of these are of increasing, some of declining significance. Some are temporary arrangements, some are or have been important institutions of long history. A Commonwealth institution of

long history that now is fading away is the Judicial Committee of the Privy Council, established as the highest court of appeal in the Commonwealth and still recognized as such by a few associates. Eliminating appeals to the Privy Council and arranging that all law cases, including those involving the interpretation of a constitution, shall be settled within the associated country, is one way of emphasizing autonomy. Canada abolished appeals to the Privy Council in 1947, India in 1949, South Africa and Pakistan in 1950.

Unofficial Commonwealthwide organizations also play an important role in strengthening ties, especially insofar as they command membership from among opinion-makers. Conspicuous among these is the Royal Institute of International Affairs, with headquarters in London and parallel organizations in each associated country. In addition to sponsoring numerous publications on intra-Commonwealth and foreign affairs, this organization has since 1933 sponsored unofficial conferences on Commonwealth relations. The reports of these conferences shed very important light on what is "on the minds" of Commonwealth members, more light, really, than the communiqués issued by the Prime Ministers. The sixth conference of the series will be held in New Zealand early in 1959.

First Among Equals

It is hard in discussing the Commonwealth to avoid giving the impression that the United Kingdom is in some fashion, legal or extra-legal, open or concealed, the "boss" of the Commonwealth. In the theory of the Commonwealth this is not true. She is simply *primus inter pares*—first among equals. But as in all human situations where this Latin tag is invoked, the mere fact that her premier position is acknowledged gives her of necessity a position of prestige in Commonwealth councils. Moreover history fortifies her prestige, for she is the Mother Country to several members and former master of all. Nor is it possible easily to forget that until World War I the United Kingdom had sole direction of the foreign political relations of all the associates; that between the wars the associates made uneven progress in giving substance to their right to direct their own foreign policies; and that even today, when all members have their own policies, that the policy of the United Kingdom is the one to which they must, to an extent, adjust their own. However, the associates differ widely in the weight they are prepared to give United Kingdom policies.

Foreign students of the Commonwealth have long been plagued by the problem of how to formulate the differing attitudes

toward the United Kingdom of the associates, especially since in some of them the degree of deference has been defined in terms of greater or lesser "loyalty." There even used to be a parlor game of placing the associates in a list in the order of their presumed "loyalty." Australia and New Zealand invariably were placed at the top of the list, the Irish at the bottom. In the post-World War II Commonwealth, one must still reckon with this complex matter of "loyalty." It is an element that helps differentiate the views of Australia and India, say. Plainly the United Kingdom no longer "bosses" India and equally plainly she doesn't boss Australia, but she certainly commands far more deference from the Australians than from the Indians. This came out in the Suez crisis of 1956 when only Australia and New Zealand supported Anthony Eden's policy. India was outraged by it. At that time a dangerous split developed in the Commonwealth and it took all the resources of Canada's diplomatic capacity to resolve the conflict. Of course the Canadians had two objectives: to preserve the Commonwealth and to mend United Kingdom-United States relations. Suez demonstrated conclusively that the United Kingdom could no longer expect acceptance by the associates of policies disagreeable to them as independent nations. She learned that she must solicit support for her policies in consultation with her fellows; and she may not always get it; all she may get is acquiescence, as India acquiesces in her participation in NATO.

Relations with United Kingdom

There is, clearly enough, a contradiction of theory at the heart of the Commonwealth, in that relations between the individual associates and the United Kingdom bulk larger and have more importance than relations with any of the associates. Before World War II, a witty Canadian remarked that "We all constantly write home to Mother but we don't write often to one another." There is ample testimony that the volume of communication has risen all around since that time, but the correspondence with London is still the most voluminous. The United Kingdom is the only member to have a separate ministry for Commonwealth relations, headed by a Secretary of State who is a member of the cabinet. The rest normally handle Commonwealth relations through their ministries of External Affairs. There is a habit amongst the Commonwealth members of taking the norm of relations between the member and the United Kingdom as the desirable norm for all the associates. All the associates place great emphasis on their relations with the

United Kingdom and a lesser emphasis on their relations with the other associates. In fact, relations between two associates can be quite bad, while their relations with the United Kingdom continue good, and the good relations with the United Kingdom allow them to remain at ease in the Commonwealth. In the light of this, the Suez adventure was a blow at the heart of the Commonwealth for it opened up the prospect of strained relations between the United Kingdom and most of the Commonwealth associates.

The central position of the United Kingdom also comes out clearly when the material foundations of the Commonwealth are considered. They are to be sought in the fields of finance and trade (including shipping), and are primarily to be identified with that great subsystem of the global trade network, the Sterling Area, which is tied to the British pound. The financial and trading relations of the Commonwealth countries, except Canada, which is a "dollar country," are within the Sterling Area. The Sterling Area is, from the present point of view, a mixed group of national economies strongly linked to the United Kingdom economy. The position of the United Kingdom is central in the linked economies which make up the Commonwealth and that this is another factor in sustaining her position as unquestionably first among equals. However, it must not be overlooked that the economic factors do not *determine* Commonwealth relations. Canada, the senior overseas associate, has its primary trading and financial linkages with the dollar. The Commonwealth, in short, is not to be interpreted exclusively in material terms.

Traditionally Americans have assumed that "relations with the British" has meant simply relations with the United Kingdom. Even today there are Americans who still think of relations with the United Kingdom as covering pretty much all that is important in relations with the Commonwealth. This is, however, a dying error. Today American policy makers are aware that while the United Kingdom must loom large in their line of vision, they must also have policies for each of the Commonwealth associates and a sense of the impact of the policies on the other associates and the Commonwealth as a whole. The United States cannot join with Australia in SEATO without calculating the effect this will have on India; both must try to reckon out what effect India's hostility to SEATO will have on the Commonwealth as a whole. Similarly, the United States must calculate the effect of joining Canada and the United Kingdom in NATO will have on Australia and India. An American policy acceptable to one or two or three members of the Common-

wealth may be acutely alarming to another member. The United States must deal in both thought and action with each member individually while taking into account the probable effects on the other members.

The Need for Allies

The numerous ways in which the United States is linked with Commonwealth members makes it clear that the Commonwealth is not able to sustain its own defence. No member of the Commonwealth, acting alone, is believed to be capable of defending itself against a major enemy; and in two world wars it was demonstrated that the Commonwealth countries acting in concert were also not able, without outside support, to achieve the defeat of their enemies. Nevertheless several of the countries do have considerable war potential and one, the United Kingdom, remains, after the buffetings of recent times, still a Great Power of the second rank. Canada and Australia are regarded as Middle Powers of waxing strength. India's power, potentially immense, is today ambiguous because of the discrepancy between her tremendous manpower and the absence of commensurate industrial power to back it. The other Commonwealth countries have but limited defence potentials.

The question arises as to how to reckon the war potential of the Commonwealth as an association. Any increase in power in any of the members is important to all. The waxing industrial power of Canada or Australia is obviously a net gain to the association. Today the Commonwealth is organized for defense on the principle of maximum development for self-defence of each associate, plus a measure of cooperation and collaboration between Commonwealth countries, plus close collaboration with the United States. Only India stands aside. She is developing her own defensive power but she does not collaborate with her Commonwealth associates or with any outside power.

The pattern of collaboration between Commonwealth countries and the United States calls attention to the fact that the Commonwealth nations are found in many different regions, in all the major regions of the world: in Europe, Asia, Africa, the Pacific Basin, even Arctic and Antarctica. Since the decline of the Pax Britannica that reached around the globe, the Commonwealth nations have tried to bolster their positions regionally, normally reaching outside the association to do so. Canada is in the North American region and must work with the United States on a regional basis; Australia and New Zealand are in the Pacific Basin and work with the

United States there; and the United Kingdom is in the European region, hence her participation in NATO. The point of all this is that the Commonwealth is simply not put together so that it can solve its politico-defense policies by internal collaboration. It must seek allies outside its ranks. Today this means looking to the United States.

U. N. and Commonwealth

Commonwealth members are also members of the United Nations. They appear in the U. N. as independent countries, but they undoubtedly gain some prestige as Commonwealth associates. Each associate speaks in its own voice. Both the consensus that exists amongst the Commonwealth nations and the divisions of opinion that characterize it find expression at U. N. The Commonwealth countries differ in the importance they assign to U. N. (and parties within Commonwealth countries differ on this point). Should the emphasis be on U. N. or on treaties outside but not in conflict with the principles of U. N.? Today no Commonwealth country can be said to be willing wholly to sink its international identity in U. N.

Two Commonwealth countries, India and South Africa, have had difficulties with U. N., South Africa over efforts to members to make its domestic racial policies the subject of U. N. debate, and India over the Kashmir dispute it has long conducted with Pakistan. The net effect in the South African case has been to make its relations with U. N. formal and distant and with regard to India to raise the possibility that India has a double standard of political morality. The fact that the Kashmir question has found its way to U. N. illustrates that the Commonwealth lacks a machinery for dealing with disputes between members. It wholly relies on "good offices," in this case not adequate. The dispute is a point of strain in Commonwealth relations no less than an irritant in international relations at the U. N. level.

It is India that has tried hardest to make South Africa's racial policies a matter of formal debate at U. N. In South Africa, the established British policy of mild liberalism in race relations has collapsed, as astute observers of Commonwealth affairs have long predicted it would sooner or later. In the international organization, South Africa can seek the protection of the principle of "domestic jurisdiction." All the Commonwealth can do for her is to defend the correctness of her position and this both the United Kingdom and Australia have done. But it is perfectly well understood that South Africa's racial policies do have both inter-

national and intra-Commonwealth implications of a serious and destructive kind. Within the Commonwealth the policies and the tensions they create between members have obvious significance in straining relations between the predominantly European associates and the African and Asian members and this jeopardizes the possibility of the Commonwealth serving as a conciliator amongst the disparate races of the world. If the Commonwealth as one of the world's great multi-racial political associations fails as conciliator, it will be a major disaster to world order.

Residuum of Good Will

How to summarize intra-Commonwealth relations succinctly is a bit of a puzzle, especially when it is recalled that in spite of differences of opinion and policy which may on occasion become acute there is a residuum of goodwill amongst the associates that it is not easy to exhaust. It is this residuum that holds the Commonwealth together today and is chiefly relied upon to hold it together tomorrow. If India condemns South Africa for its racial policies, and the United Kingdom for adventures like that at Suez, and looks askance at Australia and New Zealand for their attitudes on these matters, this is not to say—not yet at any rate—that she is about to get out of the Commonwealth, though individual Indian voices may advocate that course. For the hard and negotiable fact is that the sense of ultimate common purposes in a world of uncertainties is a reality and the net gains of continued association to promote these purposes, even if by screechingly different methods, are considerable.

If South Africa outrages Asian and African sensibilities, not to mention the conscience of the world, and is outraged in turn by the failure of all hands to "understand" her predicament and the "necessity" of her policies, then South Africa may talk in a raucous voice of becoming a republic—no longer a very effective bogey in the Commonwealth—but this does not mean that she will step outside the Commonwealth simultaneously. She, too, recognizes that the value of the Commonwealth association is considerable and worth hanging on to.

On the record so far it would seem that all that can break up the Commonwealth, or lead to the defection of an associate, is not a failure to reconcile plaguing differences of policy—these will persist, even emerge in new shapes—but the abandonment of all the overarching identities of purpose and aspiration. Thus, if a Commonwealth associate should go Commu-

nist, it would undoubtedly be assumed also to have stepped outside the association.

How the Commonwealth Began

It has taken over a hundred years to bring the Commonwealth to its present position. Its point of origin is conventionally taken to be the proposals Lord (Radical Jack) Durham made to solve the problem of governing obstreperous colonies in Canada. He proposed devolving upon the resident settlers certain powers, reserving others for exclusive Imperial handling. From that time forward the characteristic program in a maturing British colony was to claim the powers of local self-government. To these, eventually, were added the powers needed for full autonomy. By 1907 the more advanced colonies were being called "dominions" with the implication that they were on the verge of nationhood. World War I stimulated the desire of certain of the dominions to translate this implicit admission into reality and in 1926 an Inter-Imperial Relations Committee phrased the position thus:

"They are autonomous Communities within the British Empire, equal in status, in no way subordinate one to another in any respect of their domestic or external affairs, though united by a common allegiance to The Crown, and freely associated as members of the British Commonwealth of Nations."

This formula was given legislative form in the Statute of Westminster, 1931. However, this venture in verbal rationalization and statutory law did not result in arresting change within the community. As early as 1939, theoreticians accepted the proposition that "dominion status" no longer correctly described the position of the Commonwealth associates, for equality of function as well as status, especially in foreign relations, had transformed the situation. After World War II, when the Asian colonies were granted complete autonomy, the whole relationship was again reinterpreted to make the integrating principle of "common allegiance to The Crown" apply only to the associates as members of the Commonwealth, not as citizens of their own nation, thus allowing India to enter the Commonwealth as a republic. Today it is possible to be a citizen of a Commonwealth country without being in the old-fashioned sense a "King's man" at all. Only in the monarchical associates do the old sentiments persist. The net result was to make the Commonwealth at once more flexible and more loose in organization.

The present-day Commonwealth is, in large measure, a functional organization, more in the nature of a carefully calcu-

lated political association, than an organic structure with its roots in the mystical blood of the British people. It is, as a matter of fact, no longer predominantly British racially. It is multi-racial. But whatever word correctly describes its character, the Commonwealth of Nations today is as securely founded as any association of sovereign states the world currently has, or ever has had in its history. This may not appear offhand to be saying much, but to those who recognize the virtue of being realistic about human affairs, and not taking an all or nothing attitude, it is saying a very great deal. The Commonwealth of Nations gives a valuable example of *community amongst sovereign states* in a world overly emphatic in favor of atomistic sovereignty.

Australia

By C. Hartley Grattan

The Commonwealth of Australia, located in the far southwest of the Pacific Basin under the overhang of Asia, with its front door opening on the Pacific Ocean and its back on the Indian Ocean, has since 1949 been ruled by a Liberal Party-Country Party coalition, with Robert Gordon Menzies, leader of the Liberals, as Prime Minister. The Official Opposition is the Labor Party, led currently by Herbert V. Evatt. For eight years before Menzies came to power, Labor had ruled, but when the tide turned against Labor, it turned decisively.

In Australia, a parliament normally has a life of three years and an election will take place late in 1958. All signs indicate that the tide is still running against Labor, particularly because it is torn by factional feuds, but it is well to keep in mind that the only alternative to Liberal-Country Party rule is Labor and to Labor the voters will one day turn again, probably only when currently open wounds are healed and divisive policy proposals are compromised or abandoned.

The Commonwealth is, of course, a federation and Labor, while out of power at the federal level, often holds power in the states, though at this moment it holds office in but two, New South Wales and Tasmania. The politics of Australia is not understandable, moreover, unless it is kept in mind that, in office or out, the Labor Party is a dynamic and durable force. It is the only political party on the national scene with a continuous history since federation in 1901. If, from the point of view of a conservative or a liberal, it chases after strange gods on occasion, or takes to expelling large blocks of members, it is nevertheless the case that by action and

reaction to its campaigns the politics of Australia is largely determined. Labor has been the driving force behind the growth of the welfare state in Australia and much that it has done while in office is determinative of the climate in which its conservative opposition must function.

The Six Colonies

The six colonies of Australia—New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, founded between 1788 and 1859—were joined in a federation as this century began. The colonies then took the designation *states*. A House of Representatives and a Senate were provided, the number of seats in the House being determined on the basis of population (this giving New South Wales the largest delegation), and in the Senate on the basis of equality of representation of states. The key representative body is the House. The leader of the majority party in the House (or the leader of the senior party of a coalition) becomes the Prime Minister and selects his Cabinet from the House (predominantly) and the Senate. There is an independent judiciary—the High Court performs much the same functions, including judicial review, as the Supreme Court of the United States. The state governments are organized on the British parliamentary model and uniformly date back constitutionally to colonial days. The only really striking innovation is the adoption by Queensland of the unicameral (one-house) system. The political head of a state is called a Premier, to distinguish him from a Commonwealth Prime Minister; and the Queen's representative is a Governor, as distinguished from a Governor-General. Voting in federal elections is compulsory and is on the preference system—a voter indicates his first, second etc., preferences on the slate.

The Australian continent is prevailingly warm and dry and contains immense areas of low-rainfall country with a high evaporation rate. Only about a quarter of the total area, which is approximately the same as continental United States, has the rainfall which allows close settlement. The "heart" of the continent is off-side in the southeastern portion, roughly contained by a line drawn cross-country from Brisbane in Queensland to the head of Spencer Gulf in South Australia. Most of the people, most of the agriculture, and most of the factories are within that area. There are valuable extensions of it: a narrow, well-watered tropical area between the Pacific Ocean and the coastal mountains in Queensland; and a sizable block of country in the southwest of Western Australia,

mostly south of Perth. There is always ample room for differences of opinion about the actual and alternative uses for country both within the areas here selected as "good" and the rest of the continent. The current pattern of use is roughly as here indicated. Progress in Australia, both in good country and indifferent country, can helpfully be viewed in terms of technological change and mastery. Much of the future progress of Australia will arise from a more intensive use of the areas currently under exploitation.

The first great and successful system of exploitation, the one that first roughly defined the area of the continent open to profitable use, was the pastoral, with the running of sheep for wool predominating, and cattle of secondary importance. Growing cattle for beef had to await the application of refrigeration to overseas steamships. Wool growing is still the basic land industry of Australia and Australia is the world's chief producer of wool. Crop growing has been important in Australia from early days, but crop agriculture did not become significant to the export trade until around 1880, for it took that many years to develop the necessary technology (associated with large-scale dryfarming) and the requisite transport, domestic and overseas. Today Australia is, for example, one of the world's major wheat exporters; and it also exports a wide variety of other foodstuffs from dried grapes to butter and cheese and sugar.

Basic Economic Policy

The basic economic policy in recent years has been to push forward with industrial development. Modern steel production dates from 1915 and so does modern industrial history. The whole accent of the great economic expansion that has dominated the Australian scene since World War II has been on factory industry. Today far more people work in factories and offices than on the land; the country is highly urbanized; and it rates as one of the highly industrialized countries of the world. Questionings of the wisdom of this policy, which are voiced, are decidedly minority views. The hope is that manufactures will play a larger and larger role in the export trade, currently dominated by the products of the land industries.

As a trading nation, Australia has traditionally been, and currently is, closely tied to the United Kingdom, but there is a healthy tendency, cultivated by policy, to scatter its trade over a wider and wider field. Nevertheless, the country is still deeply involved in the Imperial trading system and its financial counterpart, the

Sterling Area. The state of the London commodity markets and the state of Australia's sterling balances in London are decisive to Australia as trader. One of Australia's persistent economic problems is that while it has drawn close to the United States politically since World War II, it still normally runs a dollar deficit as an international trader. To meet its dollar obligation, it must get dollar allocations from the Sterling Area authorities. The marked increase in the flow of American investment capital to Australia since World War II to participate in the great industrial development has not fully corrected the condition. As matters stand today, Australia is still firmly within the British orbit economically, though not as deeply as its neighbor, New Zealand.

Australia has for many years placed a high emotional value on the "British connection," whatever the aspect of it under discussion. It was a foundation-member of the Commonwealth of Nations and still prefers to interpret the Commonwealth relation as an intimate rather than a loose arrangement. It feels—or some of its spokesmen feel—that some of the associates carry autonomy too far. Nevertheless the fortunes of World War II and international politics since the war have forced Australia to relinquish its policy of isolation within the Imperial fold and to formulate and pursue a national foreign policy. This has proved true both for the conservatives and Labor, though Labor at first showed rather more alacrity to respond.

Foreign Policy

In formulating a foreign policy, the Australians must take into account an array of factors which must somehow be balanced and which are not always easy to balance symmetrically. It must (1) define in terms reconcilable with present-day realities its relation to the United Kingdom; (2) it must define its relations with the other associates of the Commonwealth; (3) it must cultivate close relations with the United States as the predominant power in the Pacific Basin; (4) it must give proper weight and perspective to its activities in the United Nations; and (5) it must work out satisfactory relations with the countries of South and Southeast Asia both in and out of the Commonwealth.

Perhaps the fundamental problem, as the question is viewed today, is how correctly to balance its relations with the United Kingdom on the one hand and the United States on the other, though relations with Asia push firmly for major attention. Ordinarily, since World War II,

it has not been too difficult for Australia to keep its relations with the United Kingdom and the United States in balance. Australia has moved quite close to the United States in the Pacific and Asia without offending Britain and has followed a national line in Asia without tangling with the United States. It participates in ANZUS and SEATO (Australia, New Zealand, United States defense pact and Southeast Asia Treaty Organization) with aplomb. It does not recognize Red China. In fact, Australia has jeopardized its policy of balance between the United States and the United Kingdom more by siding with the United Kingdom over Suez than by getting too close to the United States on any postwar issue. But it is nevertheless the case that Australian-U. S. relations worry the Australians a good deal, especially when put in the perspective of what the United States will do if Australian security is actually (not theoretically) menaced by developments in Asia. Will the Americans again come to the rescue as in World War II?

For the Australians obscurely recognize that they are a paradox of history. They are culturally wholly Western, but they

exist in what is geographically "the East." They are not, like the Americans or the Canadians, so situated as to face both Europe and Asia. They are "in" the Asiatic area, though not as intimately in it as some Australians tend to argue. At any rate, they are fairly close to it and obviously remote from their Western fellows, even in the era of jet aircraft. What goes on in Indonesia, immediately over their heads like an umbrella, is obviously a more intimate worry to them than to the far-away Americans. They are Western and show few signs of any wish to be assimilated to "the East," either politically or culturally. When the expansion of Europe dispersed Europeans over the globe, they found in Australia a continent even emptier than North America. There they—chiefly men from the British Isles—built up a culture from scratch. The result is a Western exotic in that part of the globe where the standard style of life is Eastern. Hence the current Australian anxiety to sustain the position by rapidly building up population and economic strength. Only thus, plus the right foreign policy, can the Australians hope to sustain their peculiar position in the critical decades ahead.

CANADA

By

W. L. MORTON

Professor of History, University of Manitoba, Winnipeg, Canada

CANADA TODAY is a nation of disproportionate population and resources. Its population of less than 17,000,000 is almost ludicrously small in relation to its territory and resources. Canada is a very small boy wearing very large pants. Because of this disproportion, the nation's interest and activity in world affairs is also out of balance with its population and even with its industrial development, which is large in relation to its population. The consequence is that a country which ought to be wrapped up in its internal development, in fact has to be actively concerned with world politics. The disparity of Canada's population and resources, combined with its high degree of industrial development, gives rise to surpluses of raw materials and manufactured goods, which must be disposed of as exports.

To this economic reason, a second and political reason must be added: Anything approaching a policy of isolation within North America means domination by the United States for Canada.

In world politics, Canada moves in three areas, the Commonwealth, the Americas and the United Nations.

The Commonwealth is a traditional association. In it Canada finds means to preserve old friends, such as the British members, and to make new, such as the Asian and the African. In it, Canadians also hope to discover proof of their faith that political liberty is the surest bond of union among free nations.

In relations with the United States, Canada finds, of course, its best hope of defense and the source of much of its developmental capital and of its industrial strength. The binding military alliance between the two countries and the extensive economic ties constitute a relationship so close that among Canadians there is concern for the political independence of their country. This concern has its cause not in policies or acts of the United States, but in the tremendous inequality of the two countries.

Thus, the relationship with the United States, though in many ways a fortunate and rewarding one for Canada, is in other ways a cramping and even an irritating bond. Canada therefore seeks relief from this dependence in the United Nations. Here Canada has enjoyed participation in

world politics and, thanks in great part to the personal candour and diplomatic skill of Lester B. Pearson, Secretary of State for External Affairs, 1948-57, has achieved some distinction and performed some useful services. The United Nations, since the Security Council deadlocked, has of course become a forum of the smaller powers. In that forum, Canada, as a nation with a minimum of political interests outside its own borders, had a natural role to play as confidential intermediary and honest broker. This role Canadian diplomatists took up with much gusto and to some effect.

Canada has been a keen member of one other international organization, the North Atlantic Treaty Organization. It is not too much to say that NATO has been the ideal international organization for Canada. It brings into combination its Commonwealth and American associates. It affords a perfect framework in which to use Canada's relatively small population and relatively great resources in conjunction with those of both the United States and the United Kingdom. But while it brings these two together in a relationship from which Canada is not excluded, it also, by means of its European members, gives Canada associates whose members do something to offset the power of the two great members. These reasons suggest why Canada participated so eagerly in the creation of NATO and has contributed relatively so much to its upkeep even, as will be suggested, to its own possible detriment.

Canada in World Politics

Canadian foreign policy took a new direction after 1945, guided by two major concepts. One was that Canada, by virtue of its industrial strength, was no longer a small power. It had become a "Middle Power," with some of the power and therefore a claim to some of the responsibility and authority of a Great Power. The concept of Middle Power is at best only partly workable. Its validity is conditional upon world politics being responsive to economic and diplomatic influences rather than subject to military force. Or, to put it another way, the more world politics become power politics, the less workable is the idea of Middle Power. But from 1945 to 1956 there was a surprising number of opportunities for Middle Power politics.

The second idea was that after World War II Canada could not practise isolation as it had done before 1939 as a member of the League of Nations. Canada, the champions of its new policies held, must be ready to commit itself to measures designed to preserve a conjunction of world affairs favorable to Canada. Canada, in short, like the United States, gave up isolation.

If Canada was henceforth to be committed, to what was it to be committed? The immediate answer was, to the Charter of the United Nations. The Canadian diagnosis of the causes of World War II was the popular North American one, that the war had come about because the great powers had not supported the League of Nations against Hitler and Mussolini. The way to prevent another such war therefore was to establish a superior international organization and support it.

But when it became apparent after 1945, that even the United Nations was not to be immune from the rule that victory undoes the alliances which war makes, Canada had to make more limited but more specific commitments.

One of these was of course to NATO. By its membership in it Canada took the unprecedented step of committing its armed forces in time of peace to defensive positions beyond the borders of Canada. This was a remarkable indication of how profound were the forces which had produced the change in Canadian foreign policy. At least as large a majority of Canadians as of Americans had been traditionally and deeply opposed to any such involvement, and much more to any such engagement before an outbreak of war.

More recently, development of Russian nuclear power and the possibility of attack on North America across the Arctic has revived another Canadian commitment. This was one which took shape before World War II and which had almost been forgotten. At Ogdensburg in 1940 the two countries (i.e. Canada and the United States) set up the Permanent Joint Defence Committee. This act arose from the identity of interest in the defense of North America. The war itself and the fact that post-war threats to the peace had had targets more immediate than North America, caused the undertaking to fall into the background. But the threat of trans-Arctic attack revived it. Canada suddenly found itself in the line of fire between the nuclear giants, with the bulk of its own active forces stationed in western Europe. The realization of the necessity for a positive and courageous policy of commitment, evident to the clear-sighted in 1945, was now manifest to all.

Canada and the United Nations

Support of the U. N. has been the cornerstone of Canadian foreign policy since 1945. When the U. N. was set up, Canadians were inclined to be more interested in its economic and social agencies than in the political ones. In the former, the Economic and Social Council and the specialized agencies, such as the Food and Agricultural Organization, the Canadian

policy-makers thought that Canada's economic development, and its comparative political disinterestedness, would make Canadian efforts particularly useful. They also thought that in these agencies Canada would find a sphere suited to its peculiar development and situation. In it, Canada would be able to perform services and exercise an influence commensurate with its economic strength and beyond its political authority and military power. This idea was called the "functional" principle and on it was based in large measure the concept of Canada's role as a Middle Power.

Now that the economic and social agencies of the U. N. have fallen into the background as the world becomes preoccupied with the rivalries of East and West, Canadian hopes have dimmed in this respect. Also Canadian hopes of playing a great part in the economic and social agencies exaggerated the amounts of money and men Canada could in fact spare from its own development. Canada is itself, after all, in terms of its potentialities, an underdeveloped as well as an underpopulated country.

Nonetheless, the Canadian money contribution to the general expenses of the U. N. and to its specialized agencies is in most instances relatively high, when measured by percentages. These facts reflect the determination of the Canadian government and public to do somewhat more than Canada's share to maintain the international organizations which afford the smaller nations some effective participation in world politics.

Perhaps the most characteristic aspect of Canadian policy in the economic and social work of the U. N. has been the steady Canadian pressure for the setting up of a Special United Nations Fund for Economic Development. While Canada approves economic aid given by individual countries, it is manifestly necessary so far as possible to separate economic aid from national and especially from military considerations. The present membership of Canada on the Economic and Social Council affords an opportunity to press the development of the Special Fund.

To turn to the political agencies of the U. N., Canada is a member of the Security Council at present, 1957-1960, for a second term of office, the first having been in 1947-1949. Canadian membership in the Council has been marked by three things, disappointment at the extensive use of the veto by the U.S.S.R.; a tendency to see world politics in the same general terms as the United Kingdom and the United States; and quickness to attempt to bring disputes into the hands of the United Nations, particularly the hands of the Secre-

tary General, Dag Hammarskjöld. The Canadian action in calling for intervention by the U. N. in the dispute between Nationalist and Communist China over Quemoy and Matsu islands in September, 1958, is the outstanding example of this Canadian disposition to prefer action by the U. N. to action by one or more of the great powers. It was only after hesitation, and when convinced that it was a U. N. war, that Canada entered the Korean conflict.

The small power representatives on the Security Council, however, are in the nature of things overshadowed by the permanent members. And the Security Council itself has been largely nullified by the breach between the U.S.S.R. and the Western powers. The result of course has been a gain in influence and prestige by the General Assembly, and by the small nations whose numbers dominate it. Canada as a small and relatively disinterested nation, to some degree in the confidence of the Western great powers, has been able to play an active, an often useful and, on at least one occasion, a brilliant part in the U. N. The Suez crisis of 1956 will serve to illustrate both what a policy based on support of the U. N. means to Canada, and how effectively Canada has been able to act in the General Assembly.

It will be remembered that in the Suez crisis attention did not fasten on the fact that Israel had attacked Egypt, and that France as well as Britain intervened in the resultant war to obtain control of the Suez Canal from Egypt. Attention in the United States and Canada, and indeed in the rest of the world, focused on the fact that the United Kingdom had attacked Egypt, presumably to recapture its former place in that country.

In Canada there was a public reaction of mixed and conflicting sentiments. There were those who were deeply angered by the intervention, among them the Prime Minister, Louis St. Laurent, but they were no friends of Nasser. There were those who sympathized with Israel, but were appalled by the French and British action. And there were those who were prepared to support the Franco-British action, but were appalled by its recklessness and its incompetence. One result of this conflict of emotions, in the old British sections of the country, was a frustration which discharged itself against the government of Mr. St. Laurent in the general election of 1957.

The reaction of the Canadian Department of External Affairs, however, was to attempt to restore peace and to preserve the Commonwealth, the Asian members of which were overwhelmingly on the side of Egypt. The U. N. afforded the sole agency

by which this could be done with a minimum loss of face to the powers which had attacked Egypt. Mr. Pearson's swift improvisations in the General Assembly procured first the despatch of Mr. Hammarskjöld to Egypt and then the provision of the United Nations Emergency Force to restore the frontiers on which the fighting began and to set a screen between the belligerents. Canadian troops made up a considerable part of the force, and it was placed under the command of Maj.-Gen. E. L. M. Burns, the Canadian officer who was already in charge of the supervision of the truce between Israel and her Arab neighbors.

Canada and the Commonwealth

In world politics of today the Commonwealth has, Canadians generally believe, great practical value. That is that the Commonwealth maintains a bridge to Asia from the western world. It is a political association more intimate, more confidential, more influential, than the United Nations can be. The difference is that between a club and a public meeting. Many Canadians felt indeed in 1947, as a poll of opinion then indicated, that the real test of the value of the Commonwealth was whether India, Ceylon, and Pakistan would choose to remain within it. They did so—although Burma did not—and now Ghana has chosen to remain also, as it seems likely Nigeria will. Thus the Commonwealth has become a free association in which Africans, Asians, and Europeans may meet as equals and talk in confidence.

To what an extent Canadian policy can be affected by the Commonwealth association with the Asian—or African—members was strikingly illustrated by the Suez crisis of November, 1956. The effect of Suez on Canadian public opinion has been discussed above. The particular concern of the Department of External Affairs was with the shattering consequences of the Franco-British intervention on relations with the Asian and African nations. The possibility of the Commonwealth being disrupted and the bridge to Asia collapsing was a clear and imminent danger.

What helped to save the situation was the fact that Canada and India saw the disaster in much the same way and strove together to avert a calamity both feared. Mr. Pearson's great coup in winning the support of the General Assembly for the creation of the United Nations Emergency Force made possible the Franco-British withdrawal, the restoration of the Near Eastern situation to U. N. control, and the continuation of the Asian and African nations in the Commonwealth. It was action taken and by the U. N. which averted the

worst consequences that the Canadian Department of External Affairs feared would flow from Suez, but much of that action was inspired by the association in the Commonwealth of Canada and India. Mr. Nehru and Mr. Pearson spoke the same language; Mr. Nehru and Mr. St. Laurent shared a common aversion to imperialism.

Canada values the Commonwealth for another reason than the special ties it affords with the Afro-Asian world. It is that it gives Canada, in a more limited and intimate way, a circle of associates outside America which operates, as does the U. N., to lessen Canadian dependence on the United States. It is for this reason and not merely for reasons of sentiment, that many Canadians see in the expansion of Commonwealth trade a sensible and inoffensive way of reducing Canada's economic subordination to the United States. The amount of American capital investment, the control of American branch factories by American head offices and the excess of American imports over Canadian exports to the United States seem a matter of concern to many Canadians who are not necessarily anti-American in sentiment. They merely wish to insure Canadian control of the country's economic development by a judicious diversification of foreign interests in Canada and of Canadian external trade. The room for manoeuvre in redressing the balance between American and other economic relations is admittedly narrow; the Canadian and American economies are extensively integrated in many important sectors, such as the oil, base metals, wood pulp, and automobile industries.

Canada and NATO

If the Commonwealth is to be valued as a psychological and commercial balance to the United States, so also is NATO. Here Canada finds perhaps its ideal form of association, in that it is more intimate than the U. N. and more definite than the Commonwealth. It recreates, if mainly for military and presumably for transient reasons, that European-American relationship in which Canada developed.

Canada found NATO so satisfactory that it maintained substantial forces in Europe. These forces were kept up out of a total military budget which since 1950 has run at about \$2,000,000,000 a year. This tremendous amount has been taken from a Gross National Product which was \$18,203,000,000 in 1950 and \$30,475,000,000 in 1957. The Canadian Army maintained one brigade group, with all auxiliary forces in Germany, and the Royal Canadian Air Force the First Air Division in France and Germany.

Canada and the United States

Nothing perhaps could better illustrate the relations of Canada and the United States than the fact that Canada for the sake of NATO practically resigned its enormous northern territories to the custody of the United States. So great a trust in the friendliness and good faith of the United States almost obscures the basic premise of Canadian foreign policy, that Canada must seek to have a multiplicity of extra-American relations in order to devise an offset to the sheer weight and pressure the United States exerts by passive neighborhood alone. It is not defense against American aggression that Canada needs; it is merely to avoid national suffocation that Canada needs an open window on the world if it is not to be absorbed by osmosis into the gigantic and dynamic society beside which it lives.

The Canadian need to balance the pressure American society exerts upon the national life is itself opposed, however, by the needs of continental defense. By reason of the disparity of its population and territory, Canada has always had to rely for defense on some wider military complex than its own national forces constituted, first that of the British Empire, and now that of NATO. Neither of these, however, was organized for the defense of North America and Canada has had to face the fact that to defend its territory it must unite with the United States, and give that country facilities to ensure that Canada should not become a base for attack on the United States. Both realism and good neighborliness led to this conclusion.

With the growing prospect of attack by bomber or missile over the Pole, continental defense has become increasingly significant for both countries. The latest indication of this, since the construction of the Distant Early Warning (DEW) line of radar installations begun in 1954-55, was the formulation in 1957 of the North American Air Defense command (Norad) by which American and Canadian air forces are placed under a joint command, the commanding officer being Lieut. Gen. E. Partridge of the United States Air Force and the second in command being Air Vice Marshall C. R. Slemon of the Royal Canadian Air Force. The Canadian government which agreed to Norad had been elected in an election in which there were distinct anti-American overtones.

When on the one hand Canada is obviously determined to maintain its national identity and on the other prepared to entrust its territory to American guardianship and put its air defense under American command, it may be asked why there should have been a free and rather

querulous expression of anti-American sentiments in the election of 1957, and even earlier.

The practical difficulties arise from honest differences of approach. To the practical Canadian temper it seems indisputable that Mao Tse-tung is master of China. They feel none of the American sense of outrage and defeat at the Communist victory there. To them therefore recognition seems only common sense, and there is no doubt that the Canadian government refrains from recognition only because any benefits which might accrue from it seem likely to be much less than the strain recognition would impose on relations with the United States. None the less, neither the Canadian government nor people is prepared to lift a finger in defense of Nationalist China.

Canada has prospered on the great rush of American capital since 1945, but Canadians have resented some of its accompaniments, such as American control of whole industries, notably the petroleum industry. Such a reaction is not wholly reasonable, but it is of course reminiscent of the similar American dislike of British investments in the United States before 1914. It is exceedingly difficult to forgive one's creditors. The control by the State Department of shipments to China from American-owned factories in Canada was generally resented, and with justice, but it is perhaps the one solid grievance of its kind.

The important thing in American-Canadian relation is an understanding of the real and profound differences between the two countries. For example, Canada is a land of minority rights; Quebec ensures that. The United States is the land of majority rule; the Civil War ensured that. The American never knew defeat, until he met it in China; Canadians have been defeated many times. The American thinks nothing impossible; the Canadian customarily expects the worst. These differences sprang from a different historical experience, dispose the American either to patronize or ignore the Canadian, and the Canadian to resent being viewed as a kind of lesser American.

Some sense of this need and of the differences from which it sprang prompted the visit of President Eisenhower to Ottawa in July, 1958, and the setting up of joint committees of the American and Canadian cabinets, and of Congress and Parliament. If these bodies can function it may contribute not merely to a better understanding between the governments and legislatures of the two countries, but also their more effective co-operation in continental defense and in world politics.

New Zealand

By C. Hartley Grattan

In 1957, the New Zealand Labor Party returned to office after an absence of eight years, defeating its principal opponent, the Nationalist Party, by a narrow margin. The country's form of government is British parliamentary democracy, the principal variation being the absence of an upper house, abolished in 1950. In recent years there have been two principal political parties which normally command around 90% of the vote, and a varying number of fringe parties and independent candidates for office. The Labor Party basically represents the trade unionists, who are strongly organized, while the Nationalists speak for the conservative farmers and the urban business interests. The Labor Party and the Nationalist Party are evenly balanced. Since 1935 Labor has won five elections, the Nationalists three.

Because of the balance of the parties, politics must be conducted within a fairly constricted frame of reference. The emphasis is decidedly "social." The parties are concerned to a large degree with the details of who gets what and how from private and state enterprise and from the redistribution of income through the elaborate social services. There is a large area of agreement on the use of the power of the state to achieve economic and social goals by administered policy. What differentiates the parties is the greater willingness of Labor to "control" the economy in detail. The Nationalists normally favor a more relaxed policy.

New Zealand is a small island nation in the far South Pacific Ocean, 1,200 miles from the nearest continental landmass, Australia. Just over 2,000,000 whites, predominantly of British stock, and 138,000 Maori (Polynesian natives) live there. The approach to the Maori minority is in general tolerantly assimilationist. The Maori, predominantly a rural people, have as their outstanding problem a lack of sufficient fertile land. Of the two principal islands of the group, the North Island is most intensively developed, has the larger proportion of the population, the largest city, Auckland, and the capital city, Wellington. The islands are wholly within the temperate zone, rainfall is generally adequate and regular, and the prevailing topography hilly with occasional high peaks in the North Island and quite spectacular mountains, in which glaciers are found, in the South. The islands are in the earthquake belt, but disastrous 'quakes are uncommon.

The economy is founded on pastures, mostly now artificial, devoted to dairying and grazing. Productivity is high and the

standard of living ample—higher than Australia's. New Zealand is a major exporter of butter, cheese, meat, and wool. Crop growing is for local consumption and is of secondary economic significance. In recent times light manufacturing has developed and the establishment of heavy industry mooted. The basic power resource is hydroelectricity. The New Zealand economy is described as "dependent," in that it is an export economy (with the second highest trade per capita in the world), closely linked to that of the United Kingdom. About two-thirds of all exports go to the United Kingdom, about half the imports come from there. Great efforts have been made in recent years to stabilize the economy within the prevailing domestic pattern. However, any adverse movement of prices on the U. K. markets will throw the New Zealand economy into difficulties, as occurred in 1958. The crisis of 1958 led the New Zealand government to turn to Australia for aid and in early July a loan of £10 million (\$22,400,000) was granted. Moreover it seems likely that New Zealand and Australia will seek to strengthen their trading positions by close economic collaboration in the future.

The social services are highly elaborated in New Zealand. In fact, the New Zealanders were pioneers of the welfare state, the movement dating back to the 1890's. The temper of the country is equalitarian and the prevailing frame of social reference is lower middle class.

New Zealand has in its charge a number of South Sea Islands of which the best known is the Trust Territory of Samoa (of which group the United States controls part, thus sharing a common frontier with New Zealand).

In foreign affairs, New Zealand is normally satisfied to rest in the shadow of the United Kingdom. It is one of the "loyal" associates of the Commonwealth of Nations. When the relations of the members of the Commonwealth were formally defined back in 1928-1931, New Zealand was a member of the party of reluctance. It only brought itself into line with those developments during World War II. It has not felt it wise or necessary to go as far as neighboring Australia in developing its own foreign policy and a machinery of diplomacy to implement it. However, it has accommodated itself, with reluctant grace, to changed international circumstances by moving somewhat closer to Australia on a regional basis than was formerly characteristic, by accepting the implications of the power-predominance of the United States in the Pacific by joining the ANZUS Pact, and its membership in SEATO and participation in the Colombo Plan illustrate its acceptance of the

logic of its new relationship to Asia. New Zealand has played an occasionally conspicuous and generally creative role in the United Nations, but it reverted to its traditional position when it stood with Britain in the Suez crisis of 1956. How-

ever it was then under a Nationalist administration. Labor might have done differently. Today Labor's announced foreign policy is within the established pattern save for advocacy of the abolition of nuclear tests.

Because the World Politics section is organized on a regional basis we have placed other members of the Commonwealth within their areas. You will find each member of the Commonwealth of Nations discussed throughout this World Politics section.

FREE EUROPE

By

LOUIS L. SNYDER

Professor of History, City College of New York

Europe in the 20th Century

ONE OF THE decisive historical changes of the twentieth century was the decline of Western European civilization. Weakened by wars and revolutions and enclosed between the Atlantic and the frontiers of the Soviet Union, Western Europe lost her traditional dominance. Along with this development came the deterioration of the British Empire, the emergence of a new order in Asia, and the rise of the United States and the Soviet Union as world powers.

Twice in the first half of the twentieth century Europe was left in disorder and ruins by great wars. World War I from 1914 to 1918 came as a result of clashing imperialist ambitions, trade rivalries, militarism, and chauvinism. Germany was thwarted in her first attempt to obtain "a place in the sun." The tragic results of the war included huge human and material losses, the disruption of the European economy, and a residue of irreconcilable hatreds. Economic collapse was followed by challenge from totalitarian mass movements—communism in Soviet Russia, fascism in Italy, and national socialism in Germany. There was a bitter struggle for the continued existence of democratic ideas and institutions.

Many of the same causes that brought about World War I acted to lead to World War II. The human and material losses this time were inestimably greater. The entire fabric of European economic life was dislocated. Maintenance of the war effort engulfed all aspects of economics. Income from exports declined to a minimum, and investments were liquidated to pay for critical war materials. At the close of the war the gold and dollar reserves in Europe were near the vanishing point.

By 1947 a critical economic crisis was at hand.

From the American point of view this decline of Western Europe was a regrettable development. There were bonds of common interest and common historical development between Western Europe and the United States. The United States could not stand idly aside and witness the further deterioration of Western Europe. As leader of the Free World, the United States took on the burden of bolstering the faltering Continent. This took primarily the form of economic assistance. There was no necessity nor desire for political interference, since in general the political systems of Western Europe are oriented in the direction of the liberal-democratic state.

Beginning after World War I and continuing at accelerated pace after World War II, the United States stepped into the power vacuum resulting from the abdication of Great Britain as the top world power. The United States has had to pay a penalty for this new position. There has been some resentment in Europe against American wealth and prosperity, a kind of attitude of distrust toward the rich uncle.

On the other hand, there has been widespread recognition throughout Free Europe of the important role played by American aid. And there is also awareness that the American way of life is immeasurably closer to European civilization than is that of the Soviet Union. The choice of Free Europe for American orientation is a realistic policy based on survival. The people of the Western European countries are much better informed than are Americans on the nature of the Russian giant to the East. Closer to Moscow, they are aware of its aims, aspirations, and methods. As hosts to the persecuted who have escaped from

behind the iron curtain, they know at first hand the nature of the police state and its negation of the Western liberal-democratic ideology. They want their problems solved in a free society and are unwilling to barter their heritage of freedom for doubtful promises of a better future.

The Cold War

After World War II, slowly but with ever-increasing momentum, the greater part of the world gravitated into two antagonistic camps. What is called the "Cold War" is an expression of an ideological battle between the cultural humanism of the Free World, under the leadership of the United States, and the totalitarianism of the Soviet Union.

The balance of power in the postwar world shifted drastically as the Soviet Union annexed 200,000 square miles of European territory with some 24,000,000 inhabitants. The Free World took political, economic, and military steps to contain communism and prevent its spread in Europe as well as in Africa, the Near East, and the Far East. In the immediate postwar years UNRRA—The United Nations Relief and Rehabilitation Administration—brought relief to economically stricken European areas. In June, 1947, General George C. Marshall, then Secretary of State, proposed further support to the nations of Europe to prevent any additional disintegration. Under the European Recovery Program (E.R.P., or Marshall Plan) \$11 billion were spent from 1948 to 1951. The Marshall Plan, though labelled by Communists a form of "American imperialism," was an undoubted success, reducing communism in France, Italy, and West Germany.

In March, 1947, President Truman obtained authorization from Congress to send \$400 million to assist Greece and Turkey to overcome the threat of Communist infiltration (Truman Doctrine). Within three years the Communist guerrillas in Greece and Turkey gave up the struggle—the first significant victory of the policy of containment.

On April 4, 1949, Britain, France, Belgium, the Netherlands, Luxembourg, Norway, Denmark, Iceland, Italy, Portugal, Canada, and the United States became the first dozen members of the North Atlantic Treaty Organization (NATO), which agreed that an armed attack on any one or more of them in Europe or North America would be regarded as an attack upon all. This regional defense treaty marked the first time that the United States pledged itself before the outbreak of war to go to war in support of its allies. Greece, Turkey, and West Germany later joined NATO to com-

plete a pool of fifteen nations in a unique military and economic partnership. The United States assumed about one-third of the cost of mutual military bases. NATO is militarily divided into two major commands—SHAPE for Europe and SACLANT for the Atlantic Ocean area. The armed forces under the NATO Supreme Command include not fewer than two million men, about one-third of the total armed strength of the fifteen member nations. With forty-eight active divisions in Europe, a powerful force of jet aircraft, and some 350 jet airfields, the NATO powers possess a defensive shield deemed sufficient to deter aggression.

The striking military achievement of NATO is not the only factor in its success. American aid, amounting to some 40 billions of dollars (over and above the 50 billion dollars contributed by the United States to its Allies during and after World War II), helped to bring about a remarkable economic recovery in Europe. Communism lost ground in Europe—in Italy, France, and Greece, in West Germany, and in the Scandinavian and Benelux countries. In the vast area included in the NATO sphere no external aggression has taken place. Even when critical situations emerged, as in Egypt at the end of 1956, large-scale conflicts were avoided.

Within the framework of NATO there has developed a series of regional agreements for Western European integration. On January 1, 1948, the Belgian-Dutch-Luxembourg Customs Union was established (Benelux). This was followed by the Brussels Pact of 1948, by which Great Britain, France, Belgium, Luxembourg, and the Netherlands agreed to collaborate "in economic, social, and cultural matters for collective defense." Next, sixteen Western European nations formed in 1948 the Organization for European Economic Cooperation (OEEC) to cut down import duties and to convert currencies through the European Payments Union. In 1952 the European Coal and Steel Community (ECSC) was established by France, Italy, and West Germany to provide for supranational control of a common market for steel and coal. In 1957 France, Italy, West Germany, and the Benelux countries created Euromarket to stimulate trade, and Euratom, an atomic energy pool. In 1958 Belgium, France, West Germany, Italy, Luxembourg, and the Netherlands created the European Common Market, largest single customer for agricultural products in the world.

Meanwhile, steps were taken in Europe to implement the old idea of a Pan-European Council or a United States of Europe. Ten European countries participated in a

meeting at Strasbourg; Italy, France, and Britain had eighteen delegates each in a descending scale to Luxembourg with three. The Council of Europe, organized in August, 1949, was at long last an attempt to establish a single parliament for all Europe. While its success has not been spectacular, it does give a hint of future possibilities of European union.

Historical Background of Free Europe

Free Europe is the product of a long, continuous historical development. Its ideals of liberty, equality, and fraternity did not emerge full-blown, but are instead the result of trial and error, of the interplay of historical forces for centuries. The intellectual revolt of the eighteenth century Enlightenment, sometimes called the Age of Reason, gave ideology and goal to modern Western Europe and through it to the United States.

The Age of Reason was one of the few movements in history that brought an important new outlook upon existence and prepared the way for new and untried experiments. The rationalists opened a new world perspective. There was a climate

in which accepted systems of belief and conduct could be challenged. Their emphasis upon freedom of expression drove from the minds of men the crippling fear of being burned at the stake. Their regard for the natural rights of the individual was something novel and precious in human history.

From the Age of Reason emerged the twin forces of democracy and liberalism. Democracy, from *dēmos* (the people) and *kratein* (to rule) was germinated in the constitutional development of England, and its theory was disseminated by the French. Appearing in its modern form in the years from 1789 to 1815, it survived a struggle against reaction between 1815 and 1848, and thereafter grew in importance.

The concomitant force was liberalism, a spirit of "live and let live," of tolerance and understanding of other peoples.

Added to these historical forces was the appearance of nationalism. As the international Church lost its temporal power, national states tended to become more closely bound units, each possessing its own language, traditions, and culture. It was this spirit that made the French Revolution possible and successful. From France it spread to the corners of Europe.

FRANCE AND FRENCH UNION

Contemporary France

ON JUNE 1, 1958, the French National Assembly by a vote of 329 to 224 voted to invest General Charles de Gaulle, leader of the wartime French liberation movement, as Premier of France. De Gaulle returned to power twelve years after renouncing the Provisional Presidency and at a moment when France faced the threat of civil war. Immediately before he became Premier he set his terms in a seven-minute speech:

1. Six months of uninterrupted rule by decree without interference from Parliament;
2. Immediate action to reform the Constitution to permit a popular referendum on reforms to produce a strong executive and "separate and balanced powers";
3. Authority to submit to a referendum reforms which would replace the centralized French Union with a new confederation within which the overseas territories would be granted local autonomy approaching the status of independence.

The investiture of General de Gaulle was a major new step in French history.

While pledged to use only peaceful constitutional means, his government was certain to transform the Fourth French Republic* from a parliamentary democracy to a Presidential one with a strong executive and balanced powers.

Designation of General de Gaulle as French Premier came as a climax to one of the most serious crises in French history. Cabinets fell regularly and the country was without leadership at critical moments. On the left, the Communists took advantage of the chaos to advance their cause, while on the right General de Gaulle waited in the wings, having announced his willingness to take over, but only with authority to end the interminable squabbles he attributed to the na-

* The First Republic of France was proclaimed on September 21, 1792, during the French Revolution, and was ended by Napoleonic coup d'état on November 7, 1799. The Second French Republic began on December 10, 1848, when Prince Louis Napoleon was elected President, and ended when he made himself Napoleon III on December 2, 1852. The Third French Republic was set up on September 4, 1870, after the defeat of France at Sedan in the Franco-Prussian War. It lasted until June, 1940, when Marshal Pétain, hero of World War I, established the Vichy Government. The Fourth French Republic was established provisionally on November 7, 1944, under General de Gaulle, then leader of the Free French movement. Its formal existence was proclaimed on December 24, 1946.

lon's loose political structure. The glory that once was France had gradually lost its economic base as financial problems piled up. Equally disturbing was the fact that the French were caught between an empire they were unwilling to give up and a brutal war in Algeria.

The problems faced by de Gaulle had been piling up since the end of World War I. That conflict left France confused, discouraged, and disunited. The old malady of short-lived cabinets, traditional in all the French Republics, reappeared in even more aggravating form. No cabinet enjoyed the support of the entire nation. France had thirteen governments from her liberation in 1945 to March, 1952, and twenty-five governments from 1945 to May, 1958. The country was split three ways: a social democratic France, a communist France (though Communists were excluded from the government after April 30, 1947), and conservative France.

General Charles de Gaulle refused to accept any of these three parties. Maintaining that he was above parties, he launched a movement known as *Réassemblement du peuple Français* (Reunion of the French people), which demanded a strong France under a strong leader. Still another movement was known as "The Third Force," a loose combination of Socialist groups acting in collaboration with the MRP (*Mouvement Republicain Populaire*), a Roman Catholic faction opposed both to the Communists and de Gaulle. The struggle between these differing political concepts was furious and futile.

Crisis of May, 1958

Exasperations long fermenting came to a head in May, 1958, when the Algerian situation exploded. Some 30,000 French *colons*, driven by fury and fearful that the French government might abandon them, surged into the streets of Algiers shouting "The army to power!" and "*Vive de Gaulle!*" Army officers in Algeria, disgusted by what they believed to be political restrictions placed by Parisian politicians on a full-out colonial defense, organized a junta, which they called the Committee of Public Safety, and in effect established that was an illegal, insurrectionist government. The French Army in Algeria was not a revolutionary army in the Fascist, Hitlerian, or Franco sense, but rather an army of patriots frustrated by the cynical do-nothing policy of the squabbling members of the Assembly in Paris. The revolt was similar to those in the days of the Roman Empire, when army leaders in the provinces took power and waited for Rome to collapse of its own weakness.

In the background was the figure of General de Gaulle. He issued an ultimatum

during the Algerian crisis: France must turn its back on its outmoded system of parliamentary supremacy and accept a strong executive with power to make policy without interference from the politicians of the National Assembly. "For twelve years," he said, "France, at grips with problems too harsh for the regime of political parties, has pursued a disastrous course. . . . Today, in the face of troubles that again engulf the country, it should be known that I am ready to take over the powers of the republic." To millions of Frenchmen and one-quarter of France's Parliament who voted Communist this was the voice of Fascism. To his supporters de Gaulle was no dictator: "He represents the best of France and he is France."

The crisis that led to de Gaulle's premiership was the outcome of France's form of government, a government in which no single group could ever attain enough power to implement a consistent long-term policy. There was a multiplicity of political parties. The Cabinet was composed of various groups and was supported by a coalition known as a bloc.

Even before de Gaulle there had been demands for sweeping constitutional reform to shore up the parliamentary regime against assaults from either Right or Left. There were calls for a stronger executive power, more power for the Council of the Republic, and the formation of a national union government excluding Communists.

A complicating factor was the French economic dilemma. A degree of economic and industrial recovery had been achieved when Marshall Aid money began to flow into France from 1948 to 1951, but economic difficulties remained grave and persistent. Much of this may be attributed to the peculiar nature of the French economic system, which has not kept pace with that of other industrialized nations. The majority of the French people are engaged in agriculture. The towns are small and inhabited mainly by shopkeepers and artisans. The small peasant proprietor is an important cog in the economic wheel. Some of the larger estates are cultivated by tenants. There are still relics of the *métayage* system, by which the owner of the land provides the buildings, animals, and machinery, and the peasant, the labor. French industries remained largely in the luxury class—silk, wines, perfumes, and the tourist trade, all of which suffer in periods of recession or depression. Equipment and methods in factories and mines are obsolete and old-fashioned. Both management and labor object strenuously to modernization of equipment and standardization of techniques. French citizens are understandably depressed by the spectacle of their long-time opponents across

the Rhine, the Germans, surging to prosperity within a short decade after World War II.

The situation was aggravated by inflation. Prices remained high and wages were far behind. Governmental expenditure always exceeded income. The economy was further stifled by the traditional French reluctance to pay income taxes, as a result of which the government was forced to resort to the imposition of indirect taxes to raise revenue. The government took over a whole series of burdens which it was unable to counterbalance by taxes or loans. Both state and people lived above their means.

Added to the factors contributing to the economic decline was the severe drain of retaining the French empire. The fighting in Indo-China and elsewhere in the French Union, especially in North Africa, depleted the French treasury and cost a heavy loss of life. The cost of rearmament under NATO was another drain. In 1952, during the forty-two days of the Edgar Faure government, spending exceeded revenue by some \$2.8 million a day. When the Premier tried to finance the rearmament program by increasing taxes 15%, the National Assembly voted him down 309 to 283.

French Position in West

Equally as bleak were the distressing social conditions. Housing in France remained among the worst in Western Europe. Tenants insisted upon retaining fixed rents established long before World War I. Landlords refused to make repairs as long as rents remained at fixed low levels, as a result of which there was little incentive to build new units.

France was the birthplace of Rousseau's idea of popular sovereignty and exaltation of the individual. But Frenchmen tended to carry the concept of individualism to such an extreme in political, social, and economic affairs that the very foundation of the nation was threatened with collapse. For the Communists this was made-to-order chaos and an inviting road to eventual power. For de Gaulle it was a challenge to transform the French way of life before it was too late.

The deepening French problems—political chaos, financial instability, and labor strife—caused great concern among the nations of the Free World. France is indispensable to the Allies' position in Western Europe. Many constructive enterprises set into motion by the West were blocked by the continuing French crisis. French troops and NATO bases on French soil form an important part of the West's defense system, and NATO's central defenses

in Europe were weakened by the transfer of the French Army from the Rhine to North Africa. France is a key member of the European Common Market, the Coal and Steel Community, and the European Atomic Energy Community. The European Payments Union, which functions as a clearing house for European trade, was weakened by France's unstable economy. The effort to maintain a Free Trade area of 290 million people in Western Europe was hampered by France's insistence upon high import duties.

The Algerian problem, especially, posed a frustrating question for American foreign policy. For more than three years the United States, long the traditional ally of France, accepted the idea that revolt-torn Algeria was just another French province, like Brittany or Normandy, juridically a part of metropolitan France. But as the Algerian war threatened to engulf all North Africa, American foreign policy began to take the view that the fighting was no longer a concern only of the French. Anglo-American good offices missions and a private "friendly letter" from President Eisenhower were of no avail. Blazing with fury at "American interference" in French affairs, the National Assembly in April 1958, threw Félix Gaillard, France's twenty-fourth Premier since the end of the war, out of office by a vote of 321 to 255.

France's relations with her allies were brought to the breaking point. Added vigor was given to the anti-Western campaign of President Nasser of the United Arab Republic. Meanwhile, the Soviet Union made political capital out of the Algerian war by exploiting the term "colonialism" and portraying it to the world as an example of "expiring Western imperialism."

In this unfortunate situation there was a tendency among the French public to blame the Americans for France's troubles. It was widely believed in France that "when the Americans let the French and British down at Suez" (the British-French invasion of Suez began in November 1956), "it set off the whole North African situation." Anti-Americanism became the bond between Communists and far-rightists, both dedicated to ending the democratic system in France. General de Gaulle, before assuming power, criticized both the American leadership of NATO and what he asserted was the French government's slavish acceptance of it, but there were indications that his position vis-à-vis both the United States and NATO softened once he had assumed the reins of power.

How can we explain the dilemma of contemporary France? The psychological temper of the French was conditioned by a series of physical and mental shocks since 1914. In World War I, France lost more than

million of her young men. She was one of those "victor nations" that lost the peace. She desperately sought security by constructing the Maginot Line and by seeking allies wherever she could find them. Within two decades the Nazi Fuehrer was on the march, and in 1940 France was subjected to one of the most humiliating defeats in her history.

These were damaging blows to a great and gifted people, to whom the Free World owes much of its way of life. After having lost the cream of their youth in two World Wars, the French are in no mood to permit the liquidation of their empire or to accept the status of a second-rate power. Nor do they want any outside interference in their domestic affairs. Under the leadership of de Gaulle the French hope to recover that prestige that marked them as one of the great powers of the world.

Historical Background

France, the Gaul of ancient times, began its history as France, a separate nation, with the Treaty of Verdun (843), by which the territories roughly comprising what are today France, Germany, and Italy were divided among Charlemagne's three grandsons. Caesar conquered part of Gaul in 52-51 B.C. and the Franks overran it in the fifth century A.D. The first of the Capetians, Hugh Capet (987-996) ruled over the principality of the Île-de-France, from which the Capetian domain was gradually expanded by conquest, purchase, marriage, inheritance, and forfeiture. The task of breaking English power in France was begun by Philip II Augustus (1180-1223) and continued in a long series of conflicts called the Hundred Years' War, 1338-1453. Beginning as a feudal conflict between French kings and the English Angevin house, this strife ended as a national war, with France emerging as a modern centralized national state. The English had won at Crécy in 1346 and at Agincourt in 1415 but were defeated at Orléans in 1429 by the French under Joan of Arc.

Relics of half-overthrown medievalism still survived in eighteenth-century France. Louis XVI (1774-1792) was unable to solve the accumulated crises. The Old Regime, with its autocratic monarch and its privileged nobility, was an outworn society ready to collapse under the impact of revolution. The French Revolution beginning in 1789 resulted from lack of intelligent government, lack of political liberty, an arbitrary system of taxation, survival of medieval abuses, economic evils, and the ideas of the intellectual reformers of the Age of Reason. It was a dramatic, bloody fair which kept France in turmoil for years.

Napoleon Bonaparte gave France a short period of glory and then the humiliation of a stunning defeat. Napoleon hardened the changes that had been brought about by the French Revolution and made some of them permanent before the forces of reaction set in; he spread revolutionary reforms to conquered German and Italian territories; nourished the growth of nationalism; and consolidated the Industrial Revolution in France.

The Congress of Vienna (1815), called to remake the map of Europe on the basis of "legitimacy" and "compensations" after the downfall of Napoleon, restored the Bourbons to the throne. Louis Philippe abdicated and fled to England at the start of the Revolution of 1848, and the Second French Republic was established.

Taking advantage of a factional split, Prince Louis Napoleon assumed control of France in the coup d'état of 1851. A year later, on December 2, 1852, he proclaimed himself Napoleon III, Emperor of the French. He founded his Second French Empire on nationalism, militarism, and imperialism. His opposition to the national unification of Germany collided head-on with Bismarck's plans. The result was the Franco-Prussian War (1870-71). Napoleon III was captured at Sedan, and the Second Empire collapsed in ruins.

Reconstruction after the Franco-Prussian War was rapid, with reorganization of the army and economic and social reforms, and a new France emerged from World War I as the dominant power on the Continent. But four years of hostile occupation and the fires of war had reduced the once-thriving area of Northeast France to ruins. The Third French Republic was plagued by political instability and economic chaos.

From 1919 on, the aim of French foreign policy was to maintain German weakness by a system of military alliances isolating Germany. The rise of Hitler and the establishment of the Nazi dictatorship meant the failure of France's foreign policy. On June 5, 1940, the mechanized Nazi troops attacked the French. As the German armies drew close to Paris, Italy declared war on France and England. The Germans marched into undefended Paris, and three days later Marshal Pétain, head of the French government then at Bordeaux, asked for an armistice. It was granted on June 22, 1940, and the French armies surrendered. Flooded with Nazi agents, France was betrayed as well as defeated. France was split into occupied and unoccupied zones. The unoccupied portion, Vichy France, became a totalitarian state with Marshal Pétain as Chief of State.

France was liberated by the Allied armies in September, 1944. The French Com-

mittee of National Liberation, formed in Algiers in 1943, established a provisional government with General de Gaulle as President of Council. De Gaulle, dissatisfied with the powers assigned to him, resigned on November 13, 1946. A new constitution, establishing the Fourth French Republic, was made effective on December 24, 1946.

The Constitution of 1946 provided for a Parliament, consisting of a National Assembly of Deputies, whose 627 members were elected for five years by direct universal suffrage, and a Council of the Republic, whose 320 members were elected by a complicated indirect procedure. The dominant body was the Assembly, with the Council having only advisory and delaying powers. The President was to be elected by the two houses for a seven-year term, but could be re-elected only once. The President was the head of the French Union. The President's choice for Premier and the Premier's selection of Cabinet members were subject to ratification by the Assembly. The President could not dissolve the Assembly. All ministers were responsible to the Assembly.

French Union

UNLIKE the Belgians and the British, the French before 1939 developed a precise theory of colonial rule to which they gave the name *assimilation*. The aim was not, as in the British colonies, to develop self-government in the colonies in a loose relation with the mother country, but rather to integrate the overseas possessions with France. Let others allow the natives to develop their own indigenous culture. The ultimate purpose was to make Frenchmen out of Africans, Polynesians, and Indo-Chinese. After all, was not the culture of France "our greatest gift to the world"?

Application of the theory of assimilation was not crowned with success. The French found it difficult to absorb millions of primitive Africans and Asians into French culture. Accordingly, in the closing years of the nineteenth century they used a new approach to which they gave the name *association*. They decided to educate a small élite of natives who would be associated with French officials in bringing Western culture to the masses. The élite turned out to be a small group with little or no effect upon the mass population of the colonies. The result was inevitable—in politics, economics, and social life the colonies were either neglected or exploited for French benefit.

The Constitution of 1946 established the French Union, consisting of France's over-

De Gaulle's 1958 Constitution for the Fifth French Republic called for a vastly increased executive power. The President, instead of a ceremonial figurehead selected by Parliament, is to be elected for seven years by an "electoral college" comprised of Parliament, local governmental councils, and the overseas assemblies. The executive names the Premier; negotiates and ratifies international treaties; can dissolve Parliament (after one year); and rules by decree in national emergencies.

The Premier is, in effect, the President's chief executive, and is largely responsible to the President. Ministers cannot hold parliamentary seats; thus, as in the United States, executive and legislative powers are separated. The Assembly votes on only specified major subjects, such as budget, social welfare, education, while all other matters are handled by government decree; it sits a maximum of five and one-half months yearly. Government overthrow is obligatory only on a vote of censure by an absolute majority.

France's 45 million voters voted on the reform constitution on September 28, 1958. The result: overwhelmingly in favor.

seas territories and associated states in Africa, Asia, Oceania, and the Western Hemisphere. The Union comprised some four and a half million square miles and a population of more than seventy millions. It was divided into ninety-eight major Départements (ninety in Metropolitan France, four in Algeria [sub-divided into twelve], and four overseas—Martinique, Guadeloupe, French Guiana, and Réunion). The four northern Départements of Algeria—Algiers, Oran, Constantine, and Bône—were regarded by the French as by French *colons* in Algeria as an organic part of France, inseparable from it, and depending upon it for its existence.

The Overseas Départements were represented in the National Assembly by seventy-five deputies and in the Council of the Republic by sixty-five. At the head of each Overseas Département was a Préfet (Governor) and an elected General Council. The Constitution of 1946 provided for the formation of a High Council, consisting of members nominated by the French Government and the overseas territories and associated states, and an Assembly of the French Union, consisting of 240 delegates, 120 elected by the French Parliament, seventy-five by the territorial assemblies overseas, and forty-five by the associated states.

Despite this careful organization a large part of the French Union was either in

state of revolt or in a mood verging on revolt. French public opinion steadily resisted the granting of independence to the colonies, on the ground that if France did not retain her rank among the imperial powers she would sink to the status of a second- or third-rate nation. The French persistently declined to withdraw of their own accord and refused to recognize the force of the passion for independence that had seized the peoples of their empire. To them the French Union was a kind of solar system with the French Republic as the sun and the members of the Union revolving around it. "*L'Empire est mort. Vive l'Union Française!*" ("The Empire is dead. Long Live the French Union!").

For centuries one of the world's great Empires, France has already lost portions of her empire. Vietnam, one of the three former French Indo-Chinese Associated States, broke away from France in 1954, the northern zone twenty-nine provinces of North Vietnam—Annam) went to the Communists, while the Southern zone (South Vietnam) was proclaimed a republic in 1955. Cambodia, the second of the three former French Indo-Chinese states, declared its independence as a constitutional monarchy on September 25, 1955. The third state, Laos, became an independent sovereign state within the French Union by the treaty of July 19, 1949.

France practically ended her protectorate over Morocco in March, 1956. In the same month Tunisia was granted full independence and "interdependence" with France in the French Union. Meanwhile unrest and agitation erupted into violence in other portions of the French Union, especially in Algeria.

The new 1958 Constitution of the Fifth French Republic changed the status of the overseas territories in the French Union. Previously, they were granted limited internal self-government. Now there was given the choice of (1) remaining territories; (2) becoming Départements (states) of France on an equal basis with those inside France; or (3) becoming members of a new French federation with limited executive and legislative powers exercised through their representatives in the Senate.

Algeria

Algeria (846,124 square miles) is on the northern coast of Africa and extends for some 650 miles along the Mediterranean between Morocco on the west and Tunisia on the east. Of its population of 9,531,000 (1954) approximately 86% is native (Berber and Arabs), 12% French, and 2% other European.

Political crisis in Algeria brought the Fourth French Republic to the gravest hour of its existence and helped bring about the accession of General de Gaulle to power. Inflamed by Arab nationalism, the restive natives of Algeria demanded that they be allowed to follow Morocco and Tunisia to complete independence.

Hoping to satisfy Algerian demands, the French Parliament in 1947 gave Moslems the right to send deputies to the National Assembly in Paris. Continued unrest, however, led the French to detach troops from their NATO forces and send them to Algeria. When this proved to be insufficient, the French dispatched thousands of additional reservists to the rebellious state, where guerrilla tactics eventually tied down nearly a half million troops.

Early in 1958 the French Parliament enacted a reform bill for Algeria, establishing regional autonomy along geographic and ethnic lines and providing for voting equality between Moslems and non-Moslems. This did not satisfy the demand for independence. Arms from sympathizers in Morocco and Tunisia flowed into Algeria. The insurrection rapidly assumed the gravity of civil war, which was fought with cruelty on both sides. In February, 1958, French airmen bombed a Tunisian border village for the reason that Tunisia was supplying Algerian rebels with arms, and killed seventy-nine persons. Tunisia protested to the U.N. Security Council.

The movement to bring de Gaulle to the premiership commenced in Algeria when there were brought together under one banner the Army, the extremist European colony, and sections of the Moslem population. Leaders of the Army, in a virtual act of secession, set up a "Committee of Public Safety" and demanded that de Gaulle be given power. He got it.

As ancient Numidia, Algeria became a Roman colony at the close of the Punic Wars (145 B.C.). Conquered by the Vandals about 440 A.D., it descended from a high state of prosperity and civilization to virtual barbarism, from which it partially recovered after invasion by the Moslems about 650 A.D. In 1492 the Moors and Jews, who had been expelled from Spain, settled in Algeria. Falling under Turkish control in 1518, Algiers became for three centuries the headquarters of the Barbary pirates who preyed on Mediterranean commerce. The French took Algiers in 1830.

By the revised statute of August, 1947, Algeria had an elected Legislative Assembly, consisting of two colleges of sixty members each, and a Council which assisted the Governor-General. She was rep-

resented in the French National Assembly and was one of the ten military districts of France.

For other areas in the French Union see pp. 736 to 741 and under Laos, pp. 757 to 758.

BONN REPUBLIC

The Federal Republic of West Germany

GERMANY once again poses a critical problem area for the contemporary Free World. With a population of 50 millions in West Germany (and another 16,500,000 in East Germany which may gravitate to one side or the other), Germany is situated in the heart of Europe in a potential no-man's-land between East and West. Much depends upon these crucial questions. Is Germany at another turning point in her history? Will she be able to abandon her past drives for world domination and merge successfully with Free Europe, or will she be tempted once again to seek political and military power by playing off West and East against each other?

At the moment West Germany, under the leadership of Chancellor Dr. Konrad Adenauer, leader of the Christian Democrats, has adhered strongly to the policy of maintaining an alliance with the Free World, even though this might mean postponement of German unification. This position has been held despite the Russian aim of creating a situation favorable to a future Soviet-German rapprochement as those at Rapallo (1922) and the Stalin-Hitler Pact (1939). On the outcome of this struggle over Germany between West and East depends the future not only of Europe but of the world.

At the end of World War II Germany was laid waste as if by a gigantic scythe. The German people, stunned and bewildered, seemed unable to comprehend the extent of the disaster. At Potsdam, the triumphant Allies divided Germany into four zones of control—American, British, Russian, and French, cutting across the old state and provincial boundaries. Greater Berlin was split into four similar sectors forming a fifth zone. The occupying authorities began to denazify, demilitarize, and democratize Germany, a task considerably weakened by increasing friction between the Soviet Union and the West.

Proclaimed in 1949

The Federal Republic of West Germany, with its capital at Bonn, was proclaimed on May 23, 1949. Of some 432 deputies to the Bonn parliament, the Communists elected but fifteen. Dr. Theodor Heuss, Free Democrat, was chosen first President on

September 12, 1949, and re-elected on July 17, 1954. The first Chancellor, nominated by the President and subject to the approval of the *Bundestag*, was Dr. Konrad Adenauer (named again on October 9, 1953).

The Constitution of the German Federal Republic embodies the best features of the French Declaration of the Rights of Man, the first ten amendments to the American Constitution, the British Bill of Rights, and the Weimar Constitution. It was adopted by the Parliamentary Council on May 8, 1949, and approved by the High Commissioners on May 12, 1949. It provides for a Federal President, chosen for a term of five years by a Federal Convention. The Parliament consists of two legislative houses. The upper house, the *Bundesrat*, represents and is appointed by the governments of the *Länder*, or states. The lower house, the *Bundestag*, is elected for a period of four years by universal suffrage. The Chancellor, or Prime Minister, is appointed by the President, though the *Bundestag* reserves the right to elect a Chancellor of its own preference. Each of the ten constituent *Länder* is required to have a republican form of government with an assembly chosen by the people.

In 1954 the United States, United Kingdom, and France agreed to maintain troops in West Germany, not as occupation troops but as a means of ensuring the defense of the Free World. The German Federal armed forces were not to exceed twelve divisions, a tactical air force of some 1,350 aircraft, and light coastal defense and escort vessels. These forces, as well as all other NATO forces in Europe, are under the authority of the Supreme Allied Commander, Europe. In 1956 the *Bundestag* legalized national armament, but clearly specified that there would be civilian control over the military.

On May 26, 1952, the Bonn Republic was integrated into the North Atlantic Alliance and entered the free community of nations as an equal partner. It is a member of the Council of Europe, the European Coal and Steel Community, UNESCO, and the Western European Union. It became officially independent on May 5, 1955. Under Dr. Adenauer's guidance, West Germany allied itself with the western Free World in the cold war with communism.

Startling Economy Recovery

West Germany, within a decade after its defeat in World War II, attained an economic recovery almost without parallel in history. Unemployment was reduced; the currency reserve rose; production increased; and public finances, showing surpluses despite tax reductions, became the envy of Europe. To some extent this remarkable phenomenon was due to American aid of some \$3.4 billion, as well as hard work. But other countries have worked zealously and received American aid with far less spectacular results. The recovery of West Germany is a classic case of the free market economy operating successfully with a limited number of strategically selected controls, and greatly helped by political and economic events outside Germany. It stands in direct contrast to the economy of East Germany, which has sunk to a much lower level.

West Germany is not self-sustaining in food, especially since the loss of the agricultural areas east of the Oder-Neisse, now under Polish control, which once contained a quarter of Germany's arable land. German industry has forged ahead by leaps and bounds. By 1953 she had achieved an industrial output 59% higher than in 1936. From 1951 to 1956 West German exports tripled in value, closing in on second-place Britain and first-place United States. German car exports increased from \$54 million in 1950 to \$331 million in 1955. The German *Volkswagen* began to conquer the small-car markets of the world. Complete assembly plants were set up all over the world. West Germany now sells more bicycles in the United States than Britain, which once had a virtual monopoly on foreign bicycle sales. West Germany pushed ahead of Britain for the No. 1 trading position in South America. Her chemical exports passed those of Britain for the first time.

Public opinion in West Germany supports the governmental policy of paying reparations to Israel to expiate for the barbarous torture of the Jews during the Nazi era.

At the moment West German leadership and people are strongly oriented toward the United States and its foreign policy of containment of communism. They well remember Lenin's dictum that "Who controls Germany controls Europe." They fear the colossus to the East. They know well how their brothers in East Germany suffer under the communist yoke and they want none of it. The Communists, who had won 66% of the vote in 1932, had only 2.2% of the vote in 1953, and are now suppressed.

Present-day Germans realize that American monetary aid rescued West Germany from becoming an economic slum and a pauperized country in the heart of Europe. They are grateful for American assistance during the attempted Russian blockade in 1948, when American cargo planes in a large-scale airlift landed every three minutes, day and night, at the Tempelhof Airdrome in West Berlin. During a blockade of 320 days "Operation Vittles" moved 1,592,787 tons of supplies into West Berlin. The Soviet Government thus lost a desperate effort to dislodge the Western Allies.

An indication of the confidence placed in West Germany by the Atlantic Pact nations came in May, 1958, when Lebanon, wedged in between Israel and Syria, was torn by pro-Nasser rioting. A fleet of U. S. Air Force transport planes was immediately dispatched to the Rhine-Main Air Base at Frankfurt for use if needed in evacuating American citizens from Lebanon.

There is strong support for the policy of maintaining the association of West Germany with the Atlantic Treaty. Winston Churchill said: "I myself have never seen the disadvantage of making friends with your enemy when the war is over, with all that that implies in co-operation against an outside menace." Former Ambassador James B. Conant asserted that "we in the United States have in our new ally a powerful and reliable partner for the trying days that lie ahead."

On the other hand, other observers believe that the possibility always exists that West Germany as a matter of *Realpolitik* may come to terms with Soviet Russia, especially if the Adenauer regime comes to an end. The fate of Free Europe and the Free World hinges to a large extent on the future course taken by the German people.

The Historical Background

For a thousand years the Germans have sought for some golden mean between centralism and anarchy. Among the frustrating dualisms of German history were the permanent division between Protestantism and Catholicism, the struggle between Austria and Prussia, and the schism between Western constitutionalism and Eastern authoritarianism. So striking were the divisions of German history that until 1871 there was in fact no political unit called "Germany." One should speak of the "Germanies" before that date.

In this respect Germany has never been a typical European nation. The twin currents of liberalism and democracy were overwhelmed in the Germanies and in Germany by the forces of nationalism and militarism.

In the words of a British historian, A. J. P. Taylor: "The history of the Germans is a history of extremes. It contains everything except moderation, . . . and the Germans have experienced everything except normality."

For generations the Western world has been puzzled by some provoking questions about the Germans. What kind of people are they? How did they get that way? Why is it that they alternate between Goethe and Hitler, between the extremes of high ethical and artistic endeavor and the most abysmal cruelty and ruthlessness? The answers would seem to lie in the nature of German national character, which is never innate nor permanent but rather the result of historical and geographical conditions.

The determining factor in German history was Prussia—the state of soldiers and officials. Scarcely belonging to Germany, either geographically or culturally, Prussia expanded from her small areas in northeastern Germany and gradually impressed upon the remainder of the Germanies a pattern of tradition and ideals that came to be recognized as universally German. Among such traditions is the German respect for power, the *Obrigkeit*, for the uniform, the title, and office, resulting in a systematic regimentation going straight down through the tiers of the social order. Added to the rigidly formalistic and hierarchical occupational system were the strongly authoritarian character of the father-son relationship and the sharply subordinated position of women. These traits of obedience and discipline have shown an extraordinary endurance in Germany.

The contention that Hitlerism was a bolt out of the heavens, a "catastrophe" that suddenly appeared to plague the Germans, is inaccurate and untenable. The roots of Hitlerism lay deep in German history for the last century and a half. Behind it was a pattern of thinking tempered by nationalism, romanticism, and historicism. The Germans who were shocked and amazed by the excesses of Hitlerism never realized that it was the logical outcome of a long and dangerous tradition. The Nazi movement, in reality, was stale and unoriginal. There was little new in it except the fanatical genocide used to implement its ideology.

The Era of Bismarck

The architect of German unity was Otto von Bismarck (1815-1898), a conservative, monarchist, and militaristic Prussian Junker who had no use for "empty phrase-making and constitutions." From 1862 until his retirement in 1890 he

dominated not only the German but also the entire European scene. He unified all Germany in a series of three wars, against Denmark (1864), Austria (1866), and France (1870-1871). Historians differ on the matter of responsibility for these wars, but many believe that they were instigated and promoted by Bismarck in his zeal to obtain national unity through "blood-and-iron."

On January 18, 1871, King William I of Prussia was proclaimed William I, German Emperor, at the Hall of Mirrors, Versailles. The North German Confederation, created in 1867, was abolished, and the new Second German Reich, consisting of both North and South German states, was born. As King of Prussia, the German Emperor exercised what amounted to dictatorial control over all Germany. With a powerful army, an efficient bureaucracy, and a loyal bourgeoisie, Chancellor Bismarck consolidated a powerful centralized state under Prussian domination.

William II (1888-1918) dismissed Bismarck in 1890 and embarked upon a "New Course" stressing an intensified colonialism and a powerful navy. His chaotic foreign policy gradually culminated in the diplomatic isolation of Germany and the nearly fatal outcome of World War I.

The Second German Empire collapsed following the defeat of the German armies in 1918, the naval mutiny at Kiel, and the flight of William II to Holland. The Social Democrats, led by Ebert and Scheidemann, crushed the Communists and established a moderate republic. The Weimar Constitution of 1919 provided for a President to be elected for seven years by direct universal suffrage; a bicameral legislature, consisting of the *Reichsrat*, representing the states, and the *Reichstag*, representing the people. It contained a model Bill of Rights. Unfortunately, the value of this Constitution was weakened by including a provision (Article 48) enabling the President to rule by decree.

The Weimar Republic was neither loved, wanted, nor understood by the mass of Germans. They regarded it as a child of defeat, imposed upon a Germany whose legitimate aspirations to world leadership had been thwarted by a world conspiracy. Schooled in autocracy, obedience, and leadership, the people apparently were not ready for an advanced democratic form of government. Added to this were a crippling currency debacle, a tremendous burden of reparations, and acute economic distress.

Capital of Germany's misery was made by Adolf Hitler (1889-1945), a former Austrian war veteran, a fanatical hypochondriac, a remarkable orator, and a passionate nationalist. He aroused all the elements of

discontent by promising a Greater Germany, the abrogation of the Treaty of Versailles, the restoration of Germany's lost colonies, and the destruction of the Jews. When the Social Democrats and the Communists refused to combine against the Nazi threat, they sealed the doom of the Weimar Republic. President von Hindenburg appointed Hitler as Chancellor on January 30, 1933.

Hitler in power proceeded to obliterate democracy and fashion a totalitarian state. A barbarous campaign was initiated against the Jews. Communists, Social Democrats, Liberals, and Catholics alike felt the whip of the Nazi lash. Religion was subordinated to the state. In a sweeping program of centralization, Hitler abolished all other political parties, organized the youth movement under Nazi leadership, assumed control of the armed forces,

and subordinated all cultural activities to Nazi ideology. Civil liberties were abolished; schools were transformed into agencies for propaganda; and women were returned to the kitchen. All German citizens were imbued with ideas of glorification of the Leader (*Fuehrer*), worship of the Fatherland, intolerant racial prejudice, blind obedience, hatred for all enemies, and zest for war. The economic life of the nation was brought into harmony with the Nazi principle of self-sufficiency. In foreign affairs Hitler's program of expansionism led straight to World War II.

Hitler's wild dream of world mastery was shattered on the rocks of British, Russian, and American resistance. Germany lost 3,350,000 battle dead and spent \$272,900,000,000 in the most costly conflict in history. (For further information on Hitler see p. 741).

ITALY

Despite a strong and persistent Communist opposition, as well as minor opposition from small neo-fascist movements, the Italian Republic has pursued a policy of co-operation with the Free World. Its foreign policy is in line with NATO, of which it is a member. In return the Western nations have helped democratic Italy recover from the gravest sort of economic problems.

Following the overthrow of Mussolini's Fascist dictatorship and the armistice with the Allies (September 3, 1943), Italy joined the war against Germany as a co-belligerent. In May, 1946, King Victor Emmanuel III left the country after installing his son as King Humbert II. But a provisional coalition government held a popular plebiscite in June, 1946, as a result of which the Italians voted for a republic. King Humbert abdicated and followed his father into exile. The treaty of peace signed with the Allies on February 10, 1947, deprived Italy of her colonies and of Trieste. Although reluctantly ratifying the humiliating treaty, Italians strongly resented being classified as an ex-enemy people and felt that the Allies had let them down at the peace conference. In 1951 the United States and ten other Western nations eased the terms of the peace treaty by repudiating restrictions on armaments and by enabling Italy to exercise a trusteeship over its former colony of Italian Somaliland. In 1954 the Adriatic port of Trieste was returned to Italy. In 1955 Italy was accepted as a member of the United Nations.

Meanwhile, the Italian Republic was

confronted with a chaotic political situation. There was bitter strife between Christian (Catholic) Democrats, Liberals, Socialists, and Communists. The outstanding political figure during this period was Alcide de Gasperi, leader of the Christian Democrats and most adroit among the postwar statesmen. De Gasperi was helped considerably by the active intervention of the Catholic Church on his behalf. In the first general election under the new constitution, held in April, 1948, de Gasperi and the Christian Democrats won 306 of the 574 seats in the Chamber of Deputies, while the Popular Front of Communists and left-wing Socialists polled 182 seats.

In the general elections held in May, 1958, the Western Center parties won a comfortable majority of twenty seats in the Senate and a fifty-two-seat majority in the Chamber of Deputies. The popular vote percentages of the principal parties were: Christian Democrats, 42.2%; Communists, 22.7%; Left-wing Socialists, 14.2%; Neo-Fascists, 4.7%; Democratic Socialists, 4.0%; and Liberals, 3.5%. The extreme Left gained in popular votes. While the Communists picked up only a few votes, the Left-wing Socialists, their associates, gained 1.5% percentage points. This increase came despite the events in Hungary and the substantial measure of reform and prosperity achieved in Italy. But the government remains democratic and strongly Western in its orientation.

With the exception of Communist leaders, most Italian Communists reject the dominance of Moscow and regard their

vote as a reaction against fascism and a short-cut to economic betterment. In the elections the Catholic Church threatens excommunication to all those who profess communism.

The first article of the Constitution of 1947 reads: "Italy is a democratic republic founded on labor. Sovereignty belongs to the people." An article causing considerable debate was the one recognizing Catholicism as the sole state religion and incorporating the Concordat of 1929. Even the Communists supported this article on the pretext that communism is not the enemy of religion.

The President is elected for a term of seven years by Parliament in joint session with regional representatives. The President nominates the Cabinet, which is headed by the Premier, or Prime Minister. Parliament is composed of two houses: a Senate with 237 elective Senators and six appointed for life, and a Chamber of Deputies, elected by the people for a five-year term. All Italian citizens, including women over 21, are duty bound to vote.

The economy of Italy suffered heavy damage in World War II from Allied as well as Nazi bombings. Transportation facilities were wrecked, some 85% of the Italian merchant marine was destroyed, raw materials were exhausted, and there was a severe food shortage. The United States paid most of the \$450,000,000 allocated by UNRRA for food relief for Italy. It also presented to Italy twenty-nine ships. During the first year of the Marshall Plan (1948-1949), Italy was allocated \$601 million. Even greater sums were provided in later years: from April, 1948, to February, 1951, Italy under ECA received \$1,225 million.

As a result of this intensive pump-priming, Italian agricultural and industrial production gradually increased. By 1948 Italy's foreign trade reached 152% of the pre-war figure. Despite the remarkable progress in vitalizing economic life, only a beginning has been made. Agricultural production is still unable to meet the demands of the Italian people, who are increasing at the rate of some 400,000 a year. Land reforms, especially turning over large estates to the peasants, have been painfully slow. Energetic efforts are being made to close the gap between exports and imports. There are still some 2,000,000 unemployed in a working population of 21,000,000. The central problem remains: where will Italy find the tremendous sums needed for her economy once foreign aid stops?

Recent Italian experience seems to be an extension of a troubled history. In 1815 the Congress of Vienna restored the Italies to their former position of confused

disunity, like the Germanies a "geographical expression." The tyranny of the Restoration met with opposition by the *Carbonari* (charcoal burners), a secret society which demanded constitutional government and national unification. But Austrian armies crushed Italian uprisings in 1820, 1821, and 1831. In the 1830's Joseph Mazzini (1805-1872), brilliant liberal nationalist, organized the *Risorgimento* (Resurrection), which laid the foundation for Italian unity.

Disappointed Italian patriots looked to Sardinia for leadership. Count Camille di Cavour (1810-1861), Prime Minister of Sardinia in 1852 and the architect of United Italy, joined England and France in the Crimean War (1853-1856), and in 1859 helped France in a war against Austria, thereby obtaining Lombardy. By plebiscite in 1860, Modena, Parma, Tuscany, and the Romagna voted to join Sardinia. In 1860, Giuseppe Garibaldi (1807-1882) conquered Sicily and Naples and turned them over to Sardinia. Victor Emmanuel II, King of Sardinia, was proclaimed King of Italy on March 17, 1861.

United Italy was a constitutional monarchy modeled on that of England. From 1871 to 1914 it was found difficult to reconcile the interests of the industrialized north with those of the backward, agricultural south. Many thousands of discouraged Italians emigrated to the United States. Relations with the Church were strained; the Pope shut himself up in the Vatican as a voluntary prisoner in protest against the annexation of the Papal States in 1870.

Allied with Germany and Austria-Hungary in the Triple Alliance of 1882, Italy declared her neutrality upon the outbreak of World War I on the ground that Germany had embarked upon an offensive war. In 1915 Italy entered the war on the side of the Allies.

Benito Mussolini (1883-1945), a former Socialist, organized discontented Italians in 1919 into the Fascist Party "to rescue Italy from Bolshevism." After winning the battle of the streets against the Communists, the Black Shirts marched on Rome on October 27, 1922. Mussolini was made Premier. The price of Fascist victory was the breakdown of parliamentary government. Mussolini destroyed Parliament, suspended civil rights, wiped out political opposition, and transformed Italy into a dictatorship. He banned strikes, lockouts, and class warfare, and called for class discipline, absolute obedience, and "the sacrifice of the individual for society." He revised the system of taxation and finance, refunded foreign debts, and stabilized the currency; enacted high tariffs, expanded the merchant marine, and concluded pacts

with foreign countries; introduced an extensive program of public works; and banned birth control, divorce, and emigration. He resolved the Roman question by concluding on February 11, 1929, with Pope Pius XI a Treaty and Concordat, by which the absolute sovereignty of the papacy in Vatican City was recognized in exchange for papal recognition of the Kingdom of Italy. He gave his people everything but freedom. His basic slogan—"Believe, Obey, Fight."

Mussolini's foreign policy was expansionist, designed to make the Mediterranean an Italian lake (*Mare Nostrum*). His de-

signs on Corsica, Savoy, Nice, and Tunis enraged the French. In 1935 his troops invaded Ethiopia (Abyssinia) and annexed it despite stubborn resistance. In 1936 he aligned himself with Hitler in the Rome-Berlin Axis. Italian troops fought for Franco in the Spanish Civil War of 1936-1939. After the defeat of France in 1940, Mussolini joined Nazi Germany in World War II. The myth of Italian military strength was broken on the sands of Libya by British tanks and in Albania by Greek bayonets. The Italian dictator was caught and executed by partisans at Dongo on Lake Como on April 28, 1945.

Austria

Though theoretically neutral in the cold war, Austria, with its democratic institutions, is oriented toward Free Europe. Like Germany, Austria after World War II was divided into four zones (British, American, French, and Russian) by the occupying powers, but the Control Council at Vienna operated more smoothly than that at Berlin. The United States and Great Britain removed Austria from the ranks of enemy states by declaring the Austrians a "liberated" people. In June, 1951, Austria indicated her Western orientation by joining the General Agreement on Tariffs and Trade (GATT). She finally regained her independence on May 14, 1955, by a state treaty ending seventeen years of occupation, but only after long and difficult negotiations with the Russians. She was admitted to full membership in the United Nations in December, 1955.

The federal republic of Austria is composed of nine provinces, including Vienna. The President is elected by the people directly for a term of six years. The bicameral legislature consists of the *Bundesrat*, with fifty members chosen by the provincial assemblies, and the *Nationalrat*, with 165 members popularly elected. The Chancellor and his Cabinet are responsible for governmental administration.

Stripped of her industrial areas after World War I, with no outlet to the sea, with a soft currency, and a population less than that of metropolitan New York, Austria has long been dependent upon outside aid. Her economic recovery in recent years has been one of the most dramatic success stories of the post-World War II era. Much of this may be attributed to Marshall Plan aid.

The history of Austria before World

War I was closely identified with that of the Austro-Hungarian Empire and its ruling house, the Hapsburgs. The monarchy originated in a margravate founded by Charlemagne in the late eighth century. In 1252 Ottokar, King of Bohemia, gained possession of the Austrian territories, only to lose them to Rudolf of Hapsburg in 1276. In the next three centuries the Hapsburg power steadily grew until Charles V (1519-1556) ruled a vast area of Europe. In 1806, during the Napoleonic Wars, Emperor Francis I relinquished the crown of the Holy Roman Empire.

Austria emerged from the Congress of Vienna in 1815 as the dominant power on the Continent. Metternich, denouncing nationalism, liberalism, and democracy as "dangerous ideas," managed to hold the numerous ethnic groups in subjugation, but was forced to flee for his life with the outbreak of the Revolution of 1848. The *Ausgleich* of 1867 provided for a dual sovereignty embracing the empire of Austria and the kingdom of Hungary under Francis Joseph I, who ruled until 1916.

In 1919 the Austro-Hungarian Empire was dissolved by the treaties of St. Germain and Trianon. Austria was left in political chaos and economic ruin. In 1934 Chancellor Engelbert Dollfuss established a dictatorship, only to be assassinated by Nazi conspirators on July 25, 1934. He was succeeded by Kurt von Schuschnigg, whose futile effort to maintain Austria's independence ended with a bloodless Nazi occupation on March 12, 1938. The next day *Anschluss* (union) with Germany was proclaimed.

The foreign policy of the Republic of Austria today, dictated by its central European location, aims to avoid accusations of favoritism for either East or West. But public opinion appears to be pro-Free Europe and pro-American, and there is much resentment against the severe economic

concessions exacted by the U.S.S.R. as the price of its withdrawal in 1955.

BENELUX

The three Benelux countries (Belgium, the Netherlands, and Luxemburg) maintain their political independence but are united in a Customs Union established on January 1, 1948, which seeks full customs and tariff unity and eventually complete economic union. The Benelux Customs Union forms one of the five great trading areas of the world. It is regarded as a most important prop in the structure of Western European integration. The relations of the Benelux countries with the United States are cordial.

Belgium

Belgium is a constitutional monarchy consisting of nine provinces. Its bicameral legislature has a Senate, with members elected for four years, partly directly and partly indirectly, and a 212-member Chamber of Deputies directly elected for four years by proportional representation. There is universal suffrage, and those who do not vote are fined. Belgium joined the North Atlantic Alliance in April, 1949.

Belgium is one of the most highly industrialized nations in Europe due in part to its coal reserves. Its economic advance has been notable. In spring, 1958, the \$260 million Brussels World's Fair commenced a six-months run to portray the artifacts of today's technological revolution.

After the fall of Napoleon the Congress of Vienna (1815) joined the French Catholic Walloons of Belgium with the Germanic Protestant Flemings of Holland (United Provinces) to form the Kingdom of the Netherlands. The Belgians rose in revolt in 1830 and declared their independence. The Treaty of London (1831) guaranteed Belgian independence.

The invasion of Belgium by Germany in 1914 triggered the explosion of World War I. The Treaty of Versailles (1919) gave the strategic areas of Eupen, Malmédy, and Moresnet to Belgium. On February 17, 1934, King Albert was killed while mountain climbing and was succeeded by his son, Leopold III. Leopold III formally abdicated on July 16, 1951, and his son became King Baudouin.

Netherlands (Holland)

A constitutional, hereditary monarchy, with female succession in default of male heirs, Holland places executive responsibility in the ruler. The States-General consists of an upper chamber of seventy-five

members elected for six years by the provincial legislatures, and a lower chamber of 150 deputies elected directly for four years and retiring as a group. The Prime Minister holds office at the pleasure of the sovereign.

Grateful for American aid after both World Wars, Holland is one of the firmest friends of the United States in Europe or in the world. Her foreign policy is distinctly in line with the Atlantic Pact. She occupies a position in economic life far out of proportion to her size. Her ports have considerable trade both to and from the Continent. On December 27, 1949, Holland transferred her sovereignty over the former Netherlands Indies to the Republic of the United States of Indonesia.

In 1815 at the Congress of Vienna, the Austrian Netherlands (Belgium), against its will, was incorporated with Holland to form a bulwark against possible French aggression. This union lasted only until 1830. Holland prospered during the reign of William III (1849-1890). A new constitution in 1848 established a limited monarchy and representative government. The administration was reorganized, popular education promoted, and modern industry encouraged. The country took little part in European politics. When the male line of the House of Nassau became extinct in 1890, Wilhelmina succeeded to the throne, with her mother as Queen-Regent, and on her eighteenth birthday in 1898 assumed the reins of government.

During World War I, Holland maintained strict neutrality, but its overseas trade suffered heavily from German submarines and Allied blockade. In 1918, the deposed German Emperor, William II, was granted asylum in Doorn. Holland again announced her neutrality in 1939, but German troops invaded the country on May 10, 1940, destroying much of Rotterdam in a senseless air attack. On September 6, 1948, Wilhelmina abdicated upon her fiftieth anniversary as a ruler, and was succeeded by Juliana, her only child.

Luxemburg

Luxemburg is an independent grand duchy situated between France and Belgium. The current hereditary sovereign is the Grand Duchess Charlotte (b. 1896). Legislative power is vested in a fifty-two-member Chamber of Deputies, elected by universal suffrage. The executive power rests with a Minister of State and a Cabinet of at least three other ministers. The fifteen-member Council of State is chosen by the sovereign.

A part of the German Confederation in 1815, Luxemburg was guaranteed its independence and neutrality by the Treaty

of London in 1867. It was invaded and occupied by the Germans in both World Wars.

In 1948 Luxemburg joined the Western European Union, and during the same year abolished its unarmed neutrality and made military service compulsory. It signed the North Atlantic Pact in 1949. Luxemburg's military strength is negligible, but it is nevertheless firmly committed to Free Europe. Its foreign policy has been traditionally friendly to the United States.

Finland

Finland (Suomen Tasavalta), stretching 700 miles from the Gulf of Finland on the south to Soviet Petsamo, north of the Arctic Circle, occupies a special place of affection among Americans. After World War I, while larger nations defaulted on their war debts to the United States, Finland continued making her semi-annual payments. In November, 1934, Washington announced that Finland was the only country which had consistently lived up to the debt-funding agreement of 1922. From the viewpoint of American foreign policy, this attitude justified a most-favored nation treatment ever since.

The President of the Republic of Finland, chosen for six years by the Electoral College of 300 members, appoints the Cabinet. The single-chambered Diet, the *Eduskunta*, consists of 200 members popularly elected for three-year terms by proportional representation.

Only 3% of Finnish land is under cultivation. Industry has had a remarkable growth, the budget is usually balanced, and the currency is stable. The state religion is Evangelical Lutheran, but there is complete freedom of worship. The literacy rate is 99%, the highest in the world. Finland became a member of the United Nations on December 14, 1955.

At the end of the seventh century the Finns, probably of Mongolian origin, came to Finland from their Volga settlements. Their repeated raids on the Scandinavian coast impelled Eric IX, the Swedish king, to conquer the country in 1157 and bring it into contact with Western Christendom. By 1809 the whole of Finland was conquered by Alexander I of Russia, who set up Finland as a Grand Duchy.

The first period of Russification (1899-1905) resulted in a lessening of the powers of the Finnish Diet. The Russian language was made official, and the Finnish military system was superseded by the Russian. The pace of Russification was intensified from 1908 to 1914. When Russian control was weakened as a consequence of the March Revolution of 1917, the Finnish

Diet on July 20, 1917, proclaimed Finland's independence, which became complete on December 6, 1917.

When its territorial demands on Finland were rejected, the Soviet Union attacked Finland on November 30, 1939. The Finns made an amazing stand of three months. Finland finally capitulated, ceding 16,000 square miles to the U.S.S.R. Under German pressure the Finns joined the Nazis against Russia in 1941, but were defeated again, and ceded the Petsamo area to Soviet Russia.

There is understanding in the Free World for the special position Finland occupies as a western neighbor of the Soviet Union. In 1948 Finland signed a treaty of friendship and mutual assistance with the U.S.S.R. (extended in 1955 to 1975), and negotiated trade pacts with her. This concession to realism in foreign policy does not obviate the fact that Finnish public opinion is oriented toward Free Europe and especially toward friendship with the United States.

Greece

Greece, an important link in Free Europe defenses, is a constitutional monarchy, with executive power nominally vested in the King but actually controlled by a Council of Ministers under the chairmanship of the Premier. In the national elections held on May 11, 1958, the pro-Western National Radical Union Party, under former Premier Constantine Karamanlis, retained an absolute majority in Parliament, with 41% of the 3,800,000 votes and 173 of the 300 Parliament seats. But the Union of the Democratic Left, the lawful counterpart of the proscribed Communist Party, headed by Russian-born John Passalides, surprisingly bounded into second place with 24% of the votes and seventy-eight seats in Parliament.

Greece, traditionally the poorest country in Europe except for Albania, has undergone a striking postwar recovery. At the end of the war more than 1,500 villages and towns had been destroyed, hardly a road was passable, inflation was rampant, and poverty was an accepted way of life. In 1947 the U. S. Congress voted more than \$400,000,000 for Greek and Turkish rehabilitation (Truman Doctrine). American capital poured into Greece to be used to build up the feeble Greek economy. Since then industrial production has soared, five hundred Greek villages have electricity for the first time, railroads and highways have been improved vastly, and the national budget has been balanced. In the meantime, Communist guerrillas were defeated and order restored. Greece joined NATO in 1951.

After the Balkan Wars (1912-1913)

Greece obtained the island of Crete. She did not formally enter World War I until 1917 despite her treaty obligations to Serbia. On the abdication of King Constantine on June 12, 1917, former Premier Eleutherios Venizelos, who had led a revolutionary government in Crete in 1916, assumed control. After a plebiscite, a republic was established on April 13, 1924. Venizelos led an abortive uprising in 1935, following which the Greek people voted for the return of George II as King of the Hellenes. In 1936 General John Metaxas, who had become Premier, set up a dictatorship.

In 1940, at the beginning of World War II, Greece was invaded by the Italians, who were promptly thrown back into Albania. The Germans intervened and took Athens in 1941, but withdrew in 1944. The nation was terrorized by a veritable civil war between Royalists and Communists, the latter aided by satellites of the Soviet Union. A plebiscite held on September 1, 1946, resulted in the recall of George II, who died on April 1, 1947. He was succeeded by his brother Paul I.

For generations Greece, like Portugal, has maintained the friendliest relations with Great Britain. But commencing in 1955 and lasting to the present day there has been a strong anti-British reaction over the question of Cyprus, the third largest island in the Mediterranean. Cypriot demands for union with Greece, marked by terrorism, have been a major source of friction. The Greeks on Cyprus, comprising 81% of the population, and those on the mainland demand the union of Cyprus with Greece, while the Turkish minority of 18% on the island and the Turks themselves oppose it vehemently. The struggle is marked by anti-British as well as some anti-American feeling.

Ireland

At the present moment the Irish problem is comparatively quiescent. The twenty-six counties of southern Ireland form the State of Eire (pronounced Aireh). When England declared war on Germany in 1939, Ireland proclaimed her neutrality, thereby ending her Dominion status and withdrawing from the Commonwealth. The six counties of Ulster in the northeast form a separate government known as Northern Ireland which is closely bound to England. Protestant in faith, largely industrial, with many of its citizens descended from Cromwellian soldiers and Scottish business men, Northern Ireland still remains detached from the rest. The demand for Irish unity still persists in Eire and it is supported by many Americans of Irish extraction.

The President of Ireland is elected directly by the people for a term of seven years. The Prime Minister is nominated by the Chamber of Deputies. The bicameral legislature consists of a Senate (*Seanad Éireann*) of sixty members (forty-three from vocational panels, eleven by nomination of the Prime Minister, and six by the universities); and a Chamber of Deputies (*Dáil Éireann*), composed of 147 members elected by the people. The Senate may amend legislation but has no veto power.

Ireland is predominantly an agricultural country, with some 70% of its total land area devoted to agriculture. Mineral and forest resources are unimportant, but a considerable supply of peat is taken from the bogs. Elementary education is free and compulsory and is provided in state schools. At the upper levels education is privately controlled, mostly by the religious orders. The prevailing religion in the Irish Republic is Roman Catholic.

The history of the island begins with the life and career of St. Patrick, who introduced Christianity in 432 A.D. After recurrent invasions by the Northmen in the ninth to eleventh centuries, Henry II landed in Ireland in 1172, and organized the country after the Norman fashion. After bitter struggles between Norman barons and Irish chieftains, the Tudors established a despotic rule in Ireland, a policy followed by the Stuarts, Cromwell, and William III, until virtually all of Ireland was in the hands of the British (Act of Union, 1800).

Ireland faced three general problems: religious, the relations between Catholics and Protestants; economic, how to restore the land to the original Irish owners; and political, how to fashion a system of self-government.

During and after World War I political agitation for the freedom of Ireland was carried on by the Sinn Féin (We Ourselves), a nationalist party. The struggle between the Irish Republican Army and the British forces was waged with ruthlessness on both sides. In 1920 Parliament passed a Home Rule Bill providing for two parliaments, one in Belfast and another in Dublin. In 1921 Ireland was given political status as "a coequal member of the British Commonwealth." Seven centuries of British occupation came to an end.

From 1922 to 1932 the President of the Irish Free State was William Cosgrave, leader of the Sinn Féin's right wing. Eamon de Valera won control of the government in 1932, and in 1937 brought a new constitution into operation which restored the name of Eire and declared Ireland a sovereign, independent, democratic republic. In 1948 John A. Costello became the head of a six-party coalition cabinet.

In the Ireland Act of 1949 the British Parliament reasserted its claim to the Ulster counties, a claim not recognized by Eire. Costello lost office to de Valera in 1951, but won again in 1954. De Valera returned in 1957.

The Republic of Ireland has remained firmly aloof from political commitments in Western European integration, but there is little doubt that Irish traditions are cast in the mold of Free Europe. The foreign policy is friendly to the United States with its large and sympathetic group of citizens of Irish background. Both the government and the largely Catholic population of Ireland strongly oppose the Soviet way of life.

Portugal

Portugal joined the North Atlantic Treaty Organization in April, 1949. For the Free World this was important news, since the little country, about the size of Indiana, is strategically situated on the western part of the Iberian peninsula. Together with Spain she is in a vitally important geographical area on the western periphery of Europe and forms a kind of fixed aircraft carrier.

Dr. António de Oliveira Salazar, founder of the National Union in 1930, has been Premier and dictator of Portugal since 1932. The constitution, adopted by plebiscite in 1933, provides for a corporative republic, with a President popularly elected for a term of seven years. There are two chambers of 120 members each: the National Assembly, elected for four years to exercise legislative power (in theory it may overrule the President's veto by a two-thirds vote); and the Corporative Chamber, representing the guilds and syndicates, and handling economic and social matters. The President appoints the Premier, who selects his Cabinet, which is not responsible to the National Assembly.

There has been some criticism in the United States about the logic and wisdom of including Portugal, a dictatorship, among the nations of Free Europe in NATO. Defenders say that, while Salazar's regime is admittedly opposed to democratic and liberal ideas, it has brought political and economic stability to Portugal. In addition, it is said that support for the policy of containment of communism must be sought wherever it can be found.

Portugal was a part of Spain until it won its independence in the middle of the fifteenth century. Between 1279 and 1415, the Portuguese monarchy was gradually consolidated, despite opposition of nobility,

the Church, and the Kingdom of Castile. King John I (1385-1433) unified his country at the expense of the Castilians and the Moors of Morocco. The expansion of Portugal was brilliantly coordinated by John's son, Prince Henry, surnamed the Navigator. In 1488 Bartholomew Diaz reached the Cape of Good Hope, proving that the Far East was accessible by sea. In 1498 Vasco da Gama reached the western coast of India, to be followed by Portuguese explorers in the Cape Verde Islands, the Azores, the Madeiras, and into the Sahara hinterland. By the middle of the sixteenth century the Portuguese Empire included West and East Africa, Brazil, Persia, Indo-China, and Malaya.

In 1581 Philip II of Spain invaded Portugal and held her captive for sixty years. There followed a catastrophic decline of Portuguese commerce. Courageous and shrewd explorers, the Portuguese proved to be inefficient and corrupt colonizers. By the time the Portuguese dynasty was restored in 1640, Dutch, English, and French competitors began to seize the lion's share of the world's colonies and commerce. Portugal retained Angola and Mozambique in Africa and Brazil (until 1822), but her place as an imperial power was lost forever.

In the first half of the nineteenth century Portugal's political history was distinguished by dynasty quarrels and factional strife. In 1852 a parliamentary system was established on the Spanish principle of "rotativism," by which the "ins" and "outs" rotated in office through coercion and bribery of the voters. The corrupt King Carlos, who ascended the throne in 1889, made João Franco the Premier with dictatorial power in 1906. In 1908 Carlos and his heir were shot dead on the streets of Lisbon. The new king, Manuel II, was driven from the throne in the Revolution of 1910. Portugal was proclaimed a republic with a system modeled upon that of France.

Traditionally friendly to Great Britain, Portugal entered World War I on the Allies' side, and Portuguese troops fought on the Western Front and in Africa. In 1926 a revolution drove out the President, and six years later the Salazar dictatorship began.

The Portuguese economy is based on corporate units in industry, agriculture, and finance, each of which is supposed to regulate itself. Most of the people are engaged in agriculture, but foodstuffs must be imported. While education is compulsory, the illiteracy rate is high, with more than 40% of the population unable to read or write.

SCANDINAVIA

The three Scandinavian countries, Norway, Sweden, and Denmark, form neither a political nor an economic unity, though in 1953, together with Iceland, they established the Nordic Council, composed of delegates from the respective Parliaments to discuss mutual Scandinavian problems. Norway, Sweden, and Denmark have had a similar historical development. All three enjoy enlightened rule and a steady progress in political and social democracy. All three are dominantly Lutheran Protestant in religion, but all religions are tolerated. Illiteracy is virtually unknown in the Scandinavian countries. Despite Soviet pressure both Norway and Denmark joined the North Atlantic Pact and have made provision for NATO air bases on their territory. Sweden, closest of the three countries to the U.S.S.R., did not become a member of NATO and its foreign policy is rigidly neutral, but there is little doubt of its Western orientation. Military service is compulsory in the three countries. All maintain a traditional friendship with the United States.

Norway

Norway, one of the great sea-faring nations of the world (its merchant marine ranks as third largest) is a constitutional, hereditary monarchy. Executive power is vested in the King together with a Cabinet, or Council of State, consisting of a Prime Minister and at least seven other members. The *Storting*, or Parliament, is composed of 150 members elected by the people under proportional representation. The *Storting* discusses and votes on political and financial questions, but divides itself into two sections (*Lagting* and *Odelsting*, to discuss and pass on legislative matters. The King cannot dissolve the *Storting* before the expiration of its term. There is universal suffrage, male and female, for all citizens over twenty-three. In 1913 Norway had the distinction of being the first independent nation to establish woman suffrage.

Norwegians, like the Danes and Swedes, are of Teutonic origin. The Norsemen, also known as Vikings, ravaged the coasts of northwestern Europe from the eighth to the eleventh century.

In 1815, Norway, contrary to her wishes, fell under the control of Sweden. The union of Norway, inhabited by fishermen, sailors, merchants, and peasants, and Sweden, an aristocratic country of large estates and tenant farmers, was not a happy one, but it lasted for nearly a century. In 1905 the Norwegian parliament arranged a peaceful separation and invited a Danish prince to the Norwegian throne—

King Haakon VII. A treaty with Sweden provided that all disputes were to be settled by arbitration, and that no fortifications be erected on the common frontier. Since the separation the two countries have lived amicably as neighbors.

When World War I broke out, Norway, joined with Sweden and Denmark in a decision to remain neutral and to co-operate in the joint interest of the three countries. In World War II Norway was invaded by the Germans on April 9, 1940. She resisted for two months before the Nazis took over complete control. King Haakon and his government fled to London where they established a government-in-exile. Major Vidkun Quisling, who collaborated with the Nazis, was executed by the Norwegians in October, 1945.

While Norway's military strength is not great (army, navy, and air force are small) its strategic location and its firm adherence to NATO give it important significance in the cold war. Its foreign policy is strongly pro-Western and pro-American.

Sweden

Although generally considered as among the nations of Free Europe, Sweden has adopted a policy of neutrality in the cold war, undoubtedly dictated by her proximity to the Soviet Union. She was invited to join the Atlantic Pact in 1949 but did not accept membership. Like Switzerland, she has taken drastic steps to maintain her neutrality. Military service is compulsory from the ages of eighteen to forty-seven. The army consists of some 600,000 men in addition to a voluntary Home Guard of 100,000. The navy has three cruisers, more than a dozen destroyers, and some two dozen submarines, as well as other light units. The air force, with modern jets built in Sweden and including at least fifty combat squadrons and 1,200 planes, is the fourth largest in the world. Sweden is one of the most advanced countries in the world in the construction of atom bomb-proof military and civilian shelters.

Sweden is a constitutional monarchy. The king holds executive and judicial authority together with the Council of State headed by the Prime Minister. The *Riksdag* consists of a First Chamber with 150 members elected by provincial and municipal councils and holding office for eight years, and a Second Chamber of 23 members popularly elected for four years. Men and women over twenty-one vote.

In the nineteenth and twentieth centuries Sweden underwent a large-scale economic transformation. Although mountainous in topography, the country contains much productive land and the

Swedes have attained a high degree of proficiency in agriculture. Industry, especially mining, metal working, and building, is extensive. More than 90% of the economy is in private hands, but the government runs the railroads and much of the water power production. Sweden exports more iron ore than any other country. By supplying Nazi Germany with iron, she was able to maintain a precarious independence during the critical years of 1940-1941.

The earliest historical mention of Sweden is found in Tacitus' *Germania*, where reference is made to the powerful king and strong fleet of the Sulones. Toward the end of the tenth century Olaf Skötkonung established a Christian stronghold in Sweden. The initial union with Norway came in 1397. In 1520 the Danish King, Christian II, conquered Sweden and in the "Stockholm Blood-Bath" put leading Swedish personalities to death. Gustavus Vasa (1523-1560) broke away from Denmark and fashioned the modern Swedish state.

Sweden played a leading role in the second phase (1630-1635) of the Thirty Years' War (1618-1648). By the Treaty of Westphalia (1648), Sweden obtained western Pomerania and some neighboring territory on the Baltic. In 1700 a coalition of Russia, Poland, and Denmark united against Sweden and by the Peace of Nystad (1721) forced her to relinquish Livonia, Ingria, Estonia, and parts of Finland.

From the Napoleonic wars Sweden emerged with the gain of Norway from Denmark and with a new royal dynasty stemming from Marshal Bernadotte of France, who became King Charles XIV (1818-1844). The Bernadotte dynasty, despite its French and revolutionary origin, was stubbornly reactionary. The artificial union between Sweden and Norway led to an unhappy feud. It was finally dissolved in 1905. Between 1870 and 1914 Sweden lost one and a half million citizens, most of whom settled permanently in the United States. Sweden maintained a position of neutrality in both World Wars.

Denmark

A constitutional monarchy since 1849, Denmark has cast her lot with Free Europe. Legislative power is held jointly by king and parliament. The Constitution of 1953 provides for a unicameral parliament called the *Folketing*, consisting of 179 popularly elected members serving for four years. The cabinet is presided over by the king, who appoints the prime minister. Women are eligible to succeed to the throne.

Some 90% of Denmark is productive and nearly three-quarters is farmed. The main sources of the nation's wealth are dairy

farming and the production of meat products, all of which are exported in large quantities. The Danish merchant marine is one of the largest in the world on a per-capita basis. Like her Scandinavian neighbors, Denmark has large-scale public assistance programs, health insurance, disability and old age pensions, and unemployment insurance. There is a strong and effective co-operative movement.

The smallest of the three Scandinavian countries, Denmark emerged with the establishment of the Norwegian dynasty of the Ynglinger in Jutland at the end of the eighth century. It was subjugated and Christianized by the German King Henry I in 934. Canute the Great (1014-1035) conquered England in 1015. In the late twelfth and early thirteenth centuries Denmark became for a time the dominant power in Northern Europe.

Denmark supported Napoleon, for which she was punished at the Congress of Vienna in 1815 by the loss of Norway to Sweden. In 1864 Bismarck, together with the Austrians, made war on the little country as an initial step in the unification of Germany. Denmark was neutral in World War I. In 1939 Denmark signed a ten-year pact with Hitler, but less than a year later she was invaded by the Nazi Fuehrer. King Christian X cautioned his fellow countrymen to accept the occupation, but there was widespread resistance against the Nazi occupation. In 1944 Iceland declared its independence from Denmark, thus putting an end to a union that had existed since 1380.

In the current cold war little Denmark has turned enthusiastically and without reservation to the Free World. The army has some 100,000 men plus 25,000 in the Home Guard, the navy is small but efficient, the merchant marine is large and world-famed, and the air force numbers about 15,000 men. Denmark has approved the construction of seven airfields on Danish soil under the NATO program. A basic tenet of Danish foreign policy is traditional and consistent friendship with the United States.

Spain

Inclusion of Franco Spain among the "free nations" of Europe is regarded by Western leaders as necessary strategy in the cold war. The nature of the Franco dictatorship is well-known to all free peoples. From the viewpoint of the architects of American foreign policy, Spain, with her favorable location in Western Europe, is a bulwark against communism. Furthermore, with military service compulsory for two years, a large standing army, a navy, and air force, Spain is considered to be a

valuable military (not ideological) ally though not a member of NATO.

Defenders of this policy point out that the choice of partners must be made on a realistic basis, as witness the fact that the Western nations fought together with the Soviet Union against Nazi Germany after June, 1941. In 1951 the United States and Spain exchanged ambassadors. On September 26, 1953, by a ten-year defense agreement, Spain leased important air bases to the United States in return for military and economic aid.

This policy has been criticized vehemently both in the United States and abroad. Critics claim that the cold war is essentially an ideological struggle between nations supporting and opposing the central idea of freedom. Further, they say, to include a dictatorship such as that of Franco Spain among the "free" nations takes the props from under the meaning of such terms as "Free Europe" and the "Free World."

It was widely believed at the end of World War II that the collapse of Italy and Germany would be followed by the end of the Franco regime in Spain. At the Potsdam meeting in August, 1945, the Big Three (Great Britain, the United States, and Soviet Russia) went on record as opposing Spain as a member of the United Nations because of "its support of the Axis powers, its origins, its nature, its record." On December 12, 1946, the General Assembly moved that Spain be debarred from membership in the U. N. "until a new and acceptable government is formed." Far from bringing about Franco's downfall, these moves gave his regime a new lease on life. In 1955, under the strong support of the Latin-American countries and the Arab League, the General Assembly reversed its position and admitted Spain to membership in the U. N.

Franco's Hold

The question has often been asked: How is it possible for Franco to maintain his regime when other similar dictatorships have toppled? Most important is his firm control of the Spanish army. Of the approximately 800,000 men in the armed services there are at least 100 generals and 25,000 officers, all of whom are grateful to Franco for their positions. Through the Falange, the Spanish totalitarian party, Franco controls the police, the secret police, and the trade unions. The Spanish Catholic Church, while opposed to the Falange, regards Franco as the man who halted communism. He is strongly supported by Spanish industrialists and financiers as well as by all Spaniards who fear communism and especially another civil war.

Francisco Franco (b. Dec. 14, 1892) is *Caudillo* (leader), Chief of State, Prime Minister, and head of the Falange Party. He pushes the Falange into the foreground or background at will depending upon political expediency. He appoints the cabinet. The *Cortés*, or parliament, established in July, 1942, may formulate legislation, but it must be satisfactory to the dictator.

Spain, always predominantly agricultural, still finds it difficult to maintain a balance between production and consumption of foodstuffs. Although she has important mineral resources and raw materials, she has remained backward industrially and is faced with chronic financial difficulties. During the war years both the Allies and Germany competed for Spanish goods, so much so that a favorable balance of trade was shown. But after 1945 there was progressive economic deterioration. The cost of living rose stupendously and the gap between rich and poor widened. Workingmen were paid from ten to twelve pesetas a day (about thirty cents in dollar terms), worth very little in purchasing power. The national railway system virtually disintegrated. Because of the lack of raw materials, the iron, steel, and shipbuilding industries could operate only on a part-time basis. Meantime Franco announced a basic industrialization that would make Spain self-sufficient, an announcement received in Spain and elsewhere with much skepticism. American financial aid in return for the lease of air bases has relieved to some extent what is basically a weak economic system.

Spain, originally inhabited by Celts, Iberians, and Basques, became a part of the Roman Empire in 201 B.C., when it was conquered by Scipio Africanus. In 412 A.D. the barbarian Visigothic leader, Ataulf, crossed the Pyrenees and ruled Spain, first in the name of the Roman emperor and then independently. In 711 A.D. the Moslems under Tariq entered Spain from Africa and within a few years completed the subjugation of the country. In 732 the Franks, led by Charles Martel, defeated the Moslems at Tours, thus preventing the further expansion of Islam in southern Europe. Internal dissension of Spanish Islam invited a steady Christian conquest from the north.

Aragon and Castile became the most important Spanish states from the thirteenth to the fifteenth century, in time absorbing all the other peoples of Spain. The history of this period is a confused chronicle of fierce civil conflicts, of contests between grandees and kings, of oppressive taxation, and ecclesiastical problems. Aragon and Castile were consolidated by the marriage of Ferdinand II and Isabella I. The last

Moslem stronghold, Granada, was captured in January, 1492, the same year in which Columbus, under the sponsorship of Isabella, discovered America. With Moslem control ended, Roman Catholicism was established as the official state religion. The Jews (1492) and the Moslems (1502) were expelled from Spain at the cost of incalculable suffering and loss of life.

Once a World Power

In the era of exploration, discovery, and colonization Spain won tremendous wealth and a vast colonial empire. The conquest of Peru by Pizarro (1533) and of Mexico by Cortes (1519) brought great prosperity to the motherland. The Spanish Hapsburg monarchy, through a series of wars, diplomatic negotiations, and marriages, became for a time the most powerful in the world.

In 1588 Philip II sent his Invincible Armada to invade England, but its destruction cost Spain her supremacy on the seas and paved the way for England's colonization of America. Spain then sank rapidly to the status of a second-rate power, and never again played a major role in European politics.

In World War I Spain maintained a position of neutrality. In 1923 General Miguel Primo de Rivera became dictator. In 1930 Alfonso XIII revoked the dictatorship, but a strong antimonarchist and republican movement led to his abdication in 1931. The new Constitution declared Spain a workers' republic, broke up the large estates, separated Church and State, and secularized the schools. The 1936 elections returned a strong Popular Front majority with Manuel Azaña as President.

But political chaos persisted. On July 18, 1936, a conservative army officer in Morocco, Francisco Franco, led a mutiny against the government. The terrible civil war that followed lasted for three years and cost the lives of nearly a million men. It was, in effect, a dress rehearsal for World War II. Franco was aided by Fascist Italy and Nazi Germany, while Soviet Russia helped the Loyalist side. Several hundred leftist Americans served in the Abraham Lincoln brigade on the side of the republic. The war came to an end when Franco took Madrid on March 28, 1939. The Franco dictatorship has lasted longer than any Spanish government since pre-Napoleonic days.

The foreign policy of Franco Spain is distinguished by one dominant characteristic—unalterable opposition to the U.S.S.R. Defenders of the Franco regime are grateful for American military and economic aid and strongly support the use and development by United States forces of Spanish air and naval bases. Opponents

inside Spain have little opportunity to express their resentment.

Switzerland

Switzerland is the classic home of neutrality. It maintained neutrality in both world wars. After World War I Geneva was chosen as the seat of the League of Nations. The country is a great center for all sorts of international meetings and humanitarian associations. The International Postal Union has its headquarters in Berne, the International Committee of the Red Cross in Geneva. Switzerland has entered into no military alliances and is not a member of the United Nations, though it has joined several international agencies of the U. N.

The Swiss people do not take their neutrality for granted. Every Swiss male is required to serve in the national militia from the ages of eighteen to sixty and must take refresher courses each year.

Switzerland, as the homeland of the legendary William Tell, has always shown great sympathy for foreigners in distress. During the nineteenth century it was a haven for political refugees who came from many lands—Italians of the *Risorgimento*, Hungarian patriots of 1848, French communards, and Russian revolutionaries. In the twentieth century refugees from Fascist Italy, Nazi Germany, and from behind the Iron Curtain came to this Alpine asylum.

The Swiss Confederation consists of twenty-two sovereign cantons, each of which has a veto power over federal legislation by referendum. Federal authority is vested in a bicameral legislature. The *Ständerat*, or State Council, consists of forty-four members, two from each canton. The lower house, the *Nationalrat*, or National Council, has 196 members, one for each 24,000 of the population, elected for four-year terms. Executive authority is lodged in a board called the *Bundesrat*, or Federal Council, of seven members chosen by parliament. The Federal Council elects the President who serves for a term of one year and is ordinarily succeeded by the Vice President. The Federal Government regulates matters of war, peace, treaties, railroads, postal service, and the national mint. Each canton reserves for itself important local powers.

The people of Switzerland are of three nationalities—German, French, and Italian, all recognized as national languages in 1874. Romansch, a dialect of the Alpine regions, was added as a national language in 1937. The German Swiss number approximately 71.9% of the population; the French Swiss 20.4%; and the Italian Swiss 6%. A member of parliament may address

his colleagues in any one of the four national languages.

Switzerland is primarily an agricultural and pastoral country. With excellent pasturage conditions, the raising of cattle is of first importance. Swiss cheese, milk chocolate, and condensed milk have become world famous. However, with nearly a fourth of the land unproductive, Switzerland is dependent upon imports for much of its food supply. Manufacturing, which occupies nearly half the population, is conducted for the most part in small plants with highly skilled workers. Swiss watches, machines, and precision instruments enjoy a worldwide reputation. The Swiss banking system has become one of the most important in the world. Another source of income is the tourist traffic. Originally isolated by high mountains, Switzerland became, with the development of modern means of transportation, a land of tourists who come to enjoy its idyllically beautiful towns and mountains. The economic and social well-being of the Swiss is such as to arouse the envy of other peoples.

Called Helvetia in ancient times, Switzerland in the Middle Ages was a federation of fiefs of the Holy Roman Empire. Fashioned around the nucleus of three German forest districts of Schwyz, Uri, and Nid-

walden, the Swiss Confederation slowly added new cantons. In 1648 the Treaty of Westphalia gave Switzerland her independence from the Holy Roman Empire. French revolutionary troops occupied Switzerland in 1798 and named it the Helvetic Republic, but Napoleon in 1803 restored its federal government. At this time and again in 1815 the French- and Italian-speaking peoples of Switzerland were raised to political equality.

In 1815 the Congress of Vienna neutralized and recognized the independence of Switzerland. In the revolutionary period of 1848 the Catholic cantons seceded and organized a separate union called the *Sonderbund*. In 1848 the new Swiss constitution established a union modeled upon that of the United States. The Federal Constitution of 1874 established a strong central government while still maintaining large powers of local control in each canton.

Swiss foreign policy is carefully neutral in the cold war, even though Swiss traditions have long reflected the best of Western democratic development. Relations with the United States have always been cordial and friendly, despite friction over such differences as American tariffs on Swiss watches and watch works.

THE FAR EAST

By

JAMES WILLIAM MORLEY

Assistant Professor of Government, East Asian Institute, Columbia University

NO REGION of the world is undergoing such dynamic changes and is so wracked with conflict as the modern Far East. Homeland of nearly one-third of the human race, it has been strained for a century by the struggle to modernize its ancient cultures and to win a world position of independence and respect for its peoples. It is today a major battleground of the global conflict between Communism and democracy. Two civil wars, an international war, and a revolution have been fought here within the last decade. The problems of peace are not yet solved.

Today the nations of the Far East stand opposed in two great blocs. In the one bloc are those states seeking to build democratic societies in alliance with the United States: Japan, South Korea, the Chinese Republic on Taiwan, and the Philippines. In the other are the Soviet-allied Communist states: the Chinese People's Re-

public on the mainland and the Democratic People's Republic of North Korea.

The United States and China

The United States and Communist China have been ideologically prejudiced against each other from the beginning. The formation of the Sino-Soviet alliance has made the Chinese mainland a chief actor in the Cold War, associating itself with Soviet attitudes of hostility toward the United States and thereby drawing to itself the ill will of the United States in turn. There are also deep psychological resentments which have built up. The Chinese Communists are bitter against what they felt to be partiality for the Nationalists in America's mediation efforts in 1945-6, America's intervention in Korea, and particularly America's protection of

the Nationalist Government on Taiwan since 1950. They also see the rebuilding of Japan as a security threat.

Americans for their part have been embittered by a deep feeling of betrayal that the Chinese people, for whom they sacrificed so much in World War II, have turned against them. They have been revolted by the treatment accorded American civilians in China and later American prisoners of war. (With the release of two priests in June 1958, the number of Americans being held on spy charges was reduced to four). Many still feel hatreds engendered by the fighting in Korea. They are also fearful that the massive build-up of Communist Chinese arms may threaten Asia again with war. But most fundamental of all is the deep moral and strategic concern felt by America for the Chinese regime on Taiwan.

America's commitment to the regime on Taiwan has grown out of a series of crises.

In 1949, when the Chinese Nationalist government fled to Taiwan, the United States continued to recognize it as the legitimate government of the Republic of China. It was not, however, inclined any longer to advise or defend it. Official American disenchantment with the Nationalist regime became public after the allure of the Marshall mission in 1946; and America began to pull back, to disengage itself from Chinese as well as Korean affairs. Then came the North Korean attack in June, 1950, which shocked the nation into an immediate, far-reaching reconsideration of its Far Eastern policy. Commitment in Korea brought sudden concern for Taiwan, which flanked the American supply lines. The Seventh Fleet was dispatched to neutralize the Formosan Straits. Military and economic aid to the Nationalist Government was revived and a Military Assistance Advisory Group was dispatched to help train the island's armed forces.

The intervention of the Communist Chinese "volunteers" in the Korean War solidified these ties and led American officials to undertake a campaign to brand the mainland regime as an aggressor, which the U.N. General Assembly did, to institute an economic blockade, which was likewise done, and to persuade the powers of the world to follow its own example to refuse to recognize the mainland government and to refuse it admission to the United Nations. In February, 1955, an agreement was ratified whereby the United States agreed to defend Formosa and the Pescadores.

As to other Nationalist-held islands along the China coast, most importantly the Quemoy islands, controlling the port

of Amoy, and the Matsu islands, controlling the port of Foochow, no public commitment was made; but the Congress did authorize the President "to employ the armed forces of the United States as he deems necessary for the specific purpose of securing Formosa . . . [and its] related positions." The Communist Chinese Government did not thereupon give up its intention to "liberate" these positions, but for the next three years the Taiwan Straits were relatively quiet.

Then on August 23, 1958, following an eight-week military conference in China and a personal meeting between Mao Tse-tung and Khrushchev in Peking, July 31-August 3, the Communist forces on the mainland began a heavy shelling of Quemoy. Torpedo boat fleets were sent out to blockade the island. Chinese territorial waters were proclaimed to extend twelve nautical miles, thus including both the Matsu and Quemoy islands. Invasion, said Radio Peiping, was "imminent."

The United States reacted sharply. Secretary of State Dulles warned the mainland regime that any move to invade the offshore islands would constitute a "threat to the peace" and implied that it might have to be met by a counterattack on the mainland. U. S. naval forces in the Far East were alerted. On September 4, following a conference with the President, Mr. Dulles said that while no final decision had been made to commit American forces to the defense of the islands, "we have recognized that the securing and protecting of Quemoy and Matsu have increasingly become related to the defense of Taiwan." Three days later American naval vessels began escorting Nationalist supply convoys to Quemoy. Thereupon Soviet Premier Khrushchev issued a blunt warning that should hostilities break out between the United States and mainland China, the Soviet Union was fully prepared to come to the aid of its ally. President Eisenhower responded in a radio and television address that, be that as it may, the issue to him was one of America's obligation to defend its own ally against aggression and "we shall never timidly retreat before [such a] threat."

As the world teetered again on the brink of an atomic war no one wanted, statesmen at last began seeking a way out. On September 6, in response to a plea from President Eisenhower that negotiations be tried, Premier Chou En-lai suggested that the Chinese-American talks, which had been suspended since December, 1957, be resumed. On September 15, with the shelling of Quemoy eased and the U. N. General Assembly deferring debate, Ambassador Wang Ping-nan and Ambassador Jacob D. Beam began their fateful talks in Warsaw.

The United States and Its Far Eastern Allies

The China problem, grave as it is, is not America's only concern in the Far East. Since World War II America has been deeply disturbed by the threat of Communist expansion and in consequence has committed itself heavily to building and strengthening a non-Communist alliance with the other states of the area, namely, Japan, South Korea, the Chinese Republic on Taiwan, and the Philippines.

The effort of the United States to retain an independent Japan as an ally in the defense of the interests of the non-Communist world was rewarded in March, 1954, with the conclusion of a Mutual Defense Assistance Agreement, which specified the terms of American military aid to Japan. Outside the military sphere, the United States has done its best to expand its trade and cultural ties with Japan, to encourage its allies to accept Japan as a partner, and to persuade the world community to recognize Japan again as a responsible and important member. The result has been close cooperation and understanding in many fields.

A second American partner has been South Korea, which owes its survival largely to American support and which since 1953 has been allied in a mutual defense pact with the United States. It is not too much to say that a third partner also owes its survival to the United States: the Republic of China on Taiwan. And as in the case of South Korea, America's protective relationship toward Taiwan developed largely out of the Korean War.

America's commitments are equally strong and explicit in the Philippines, where the defense of the islands is entrusted largely to American troops based there.

Irritations Constantly Arise

Frictions within the American alliance system are more apparent than in the Soviet Bloc, in large part because the vigorous support of private interests and the free discussion of public issues is vital to our democratic system. Certain questions in particular require constant attention in American-Japanese relations: Japanese objection to American administration of Okinawa, recognized to be inherently Japanese territory, but being used as an American military base; differences in judgment about the rapidity and extent to which Japanese armed forces should replace American forces in the defense of the home islands; the use by these American forces of atomic weapons, and the continued testing of

atomic devices in the Pacific; Japanese concern for the discrimination which develops from time to time in the American market against expanding Japanese imports, when these are vitally necessary to enable Japan to pay for the much greater volume of goods it needs from the United States; and growing popular agitation in Japan against the American pressure to develop ties only with the Chinese government on Formosa, when strong cultural, political, economic, and strategic interests pull it also toward mainland China.

Problems in American-South Korean and American-Formosan relations have been less publicized in recent years, but they are none the less real. In both cases extensive help continues to be required to sustain a viable economy and effective military forces. Dependency on the United States for these needs gives great leverage to the American Government, which appears to intervene heavily in both cases to curb the tendency toward personal rule of both Syngman Rhee and Chiang K'ai-shek and to restrain their powerful drives to reopen the civil wars for the conquest of North Korea and mainland China. Pressure is also exerted for social and economic reform. Differences over policy as well as popular irritations arising out of the presence of American forces, as the Taipei Riots on Taiwan and the excitement over the Girard case in Japan in 1957 testify, give rise from time to time to difficult problems of adjustment and negotiation.

Relations with the Philippines have been relatively smooth. Requests for leniency in the application of U. S. tariffs, loans for economic development, and consideration of a status of forces agreement were received favorably in Washington during Garcia's visit in June, 1958.

It must also be realized that there is friction among America's Far Eastern partners themselves. Both Korea and Formosa were formerly colonies of the Japanese Empire. While Japan may reasonably claim to have invested heavily in the economic development of both areas, it has experienced great difficulty in overcoming the hostility its years of domination have produced. This is especially true in the case of Korea.

On the other hand, relations between Japan and the Chinese Republic on Taiwan have developed with a minimum of friction. Again, Japan has cooperated with the United States in recognizing the Chinese Republic on Taiwan rather than the Chinese People's Republic on the mainland. The Taiwan authorities in turn have accepted the peace treaty with Japan, exchanged diplomatic missions, and encouraged the development of trade. And yet, Taiwan's sudden temporary suspension of

trade with Japan in the spring of 1957, in protest against what it feared was a move by Japan implying recognition of Communist China, reflected a deep suspicion—the same suspicion which Taiwan entertains toward the United States—that Japan may sooner or later abandon it to the mercies of the mainland.

Since 1956, when the settlement of the reparations question cleared the way for the signing of the peace treaty, Japanese-Filipino relations have steadily improved, particularly in the field of trade. Relations between South Korea, Taiwan, and the Philippines have been excellent.

Japan

The transformation of Japan from an aggressive, militaristic autocracy to a pacific democracy under civilian leadership is one of the most dramatic and significant events of our time. How did this come about?

The initiative for the major reforms accomplished under the occupation came from SCAP (Supreme Command of the Allied Powers). In most cases SCAP acted in accord with stated U. S. and Allied policy, in some cases on the initiative of the supreme commander himself, General Douglas MacArthur. Under the terms of the Potsdam Declaration, SCAP's wishes were communicated to the central Japanese Government, which in turn made them into law. In the early years enforcement on the local level was checked on by special teams of the Eighth Army.

Working through the Japanese Government, the Occupation authorities attempted to recast the basic mold of Japanese society. Demilitarization and democratization were primary objectives. In Tokyo, twenty-seven top military and political leaders were brought to trial before the International Military Tribunal of the Far East. From 1946 to 1948 the pre-war and wartime activities of the militarists and their supporters were paraded in the courtroom, with the result that seven were sentenced to death, sixteen to life imprisonment, one to twenty years', and one to seven years' imprisonment.

Having discredited and swept aside many of the old leaders, SCAP tried to provide for greater popular participation in government and facilitate the rise of new, peaceful, democratic leaders by requiring the adoption of a new constitution, which came into effect in 1947. Current Japanese revisionists and most objective observers agree, however, that in spirit and in fact the new constitution was "made abroad" and forced on an unwilling Japanese Government.

The question of constitutional revision

was raised by SCAP in September, 1945. SCAP produced a document which was presented to the Japanese Government as a model. When the Japanese negotiators expressed reluctance to accept SCAP's suggestions, their agreement was extracted by warning them that otherwise SCAP might reconsider its attitude toward the person of the Emperor, who had hitherto escaped charges of war guilt, and might appeal over the heads of the government to the people. The Japanese leaders then produced a draft, which was likewise found wanting. Pressure was again exerted to make this conform to SCAP's wishes. The result was released to the public for the first time as a "Japanese document."

Constitutional changes need not and indeed may not have changed the warm emotional response felt by nearly all Japanese toward the Emperor as a person and as a symbol of Japanese life, but the legal position of the Emperor and the legal structure of the state have undergone radical changes. Among the most outstanding are the following: Sovereignty has specifically been transferred to the people, the Emperor being left with ceremonial, symbolic functions only. The Diet has been made the highest organ of state power, with the prime minister responsible to it. The judiciary has been made independent. The people have been granted universal suffrage and an impressive number of civil and human rights. Perhaps its most dramatic provision is Article 9, in which "the Japanese people forever renounce war as a sovereign right of the nation" and deny to themselves the right to maintain armed forces.

Reforms Wide and Varied

Big business was attacked and an effort was begun to break it up. While farmers were given a revision of land tenure, industrial laborers were encouraged to organize, and women were given legal equality in the home as in politics. New freedoms were granted to the press and the education system was liberalized and placed under local control. This latter reform was part of a general effort to encourage local participation in government by giving real power, not only in education but in police and many other affairs, to the prefectures, cities, and villages.

While the Occupation lasted, the Japanese Government and people cooperated to a remarkable degree in carrying out these foreign-inspired reforms. Once the Occupation was ended, however, many wondered how long they would be continued. The truth is that SCAP itself began to reverse them as early as 1948. American domestic pressures plus the advent of the Cold War

caused SCAP in that year to clamp down on Japanese Communists and, in order to strengthen Japanese leadership, to permit the gradual return of purgees to public life. The outbreak of the Korean War in 1950 caused SCAP, in spite of the constitutional provision to the contrary, to encourage the Japanese Government to develop a Police Reserve, the first step toward a rebuilding of the Japanese Army. This tendency to reverse certain occupation reforms increased when the Japanese regained independence in 1952.

Accompanying these and other "reversals" has been a conservative movement to revise the 1947 constitution, which is charged with being ill suited in many instances to the special circumstances of Japanese life. It has been suggested among other things that the specified duties of citizens should be increased. The Diet, it is said, should have greater authority to restrict citizens' rights in the interests of the public welfare. The Cabinet should be given greater independence from the Diet in fiscal and administrative areas and greater power over the Diet to dissolve or suspend it. The Emperor, the revisionists claim, should be accorded greater prestige and authority. And the restriction on the establishment of armed forces should be eliminated.

Traditional Ways Persist

Traditional habits and ways of thinking antithetical to western democratic practices persist in important areas of Japanese life. Customary deference to local notables continues, especially in the countryside. Boss-henchman or patron-client relationships are still strong whether in labor organizations, factories, business offices, or political parties. Social classes are regaining some of their former rigidity. Preference for harmony and deference to superiors are frequently evident in all classes.

Some Japanese have gone beyond the conservative revisionists to call for another revolution of the social system. The Communists have been particularly active. At times they have championed a united front of all left-wing groups, working to build front organizations in university, labor, farmer, women, and other groups, and campaigning for Diet seats. At other times they have concentrated their efforts on organizing conspiratorial underground terrorists for purposes of sabotage. But drastic and sudden shifts in the party line required by Moscow, deeds of violence, their hostility to the Emperor, and popular fears of the Soviet Union have all weakened their appeal. Except for a brief period in the early days of the Occupation, the Communists have been unable

to persuade many to join their membership or to support their parliamentary candidates.

Ultra-nationalist groups have also shown their heads again, but they have been even less influential than the Communists. Thus, while reaction is alive, its victories have been relatively small; and the appeal of extremism has been relatively negligible. Democratic ideas continue to be championed with vigor. The fact seems to be that while many of the reforms went beyond the desires of Japan's leaders, others were welcomed and indeed were a logical culmination of long-term democratic tendencies in pre-war Japan. Moreover, the "new order" has been strongly supported by those individuals and groups which have particularly profited from it, such as labor, farmer, and women's movements, and political party leaders. Most of the democratic structure imposed by the Occupation remains.

In 1955, the democratic system was strengthened by the consolidation of various political groups to form two major parties: the Social Democratic Party and the Liberal-Democratic Party. These continue today to dominate the political scene. In the May, 1958, election to the Diet only fourteen candidates outside of these parties gained election, one a Communist, one a minor party man, and twelve independents. The Social Democratic Party has been consistently in the minority. At present holding 166 or roughly one-third of the seats in the House of Representatives, the party has only once formed a government—in 1947-48. It draws some support from all major strata of the population, but is strongest with organized labor and the intellectuals. It stresses its hostility to any revisions of the constitution, its objection to American bases on Japan and Japan's rearmament, and its support for increased trade and cooperation with Communist China.

The conservatives, organized since 1955 as the Liberal-Democratic Party, have held a majority in every postwar Diet. On June 12, 1958, following the general election in which the party won 298 or not quite two-thirds of the seats in the House of Representatives, the Diet re-elected as premier the Liberal-Democratic Party president, sixty-one-year-old Nobusuke Kishi, an experienced economic planner who favors generally the business point of view at home and continued alignment with, but not subordination to, the United States abroad. First elected premier in 1957, Kishi has proved to be both popular and able. Within the Liberal-Democratic Party he has been able to harness the energies of a number of rival factions.

Among the public he has helped his

party to consolidate its appeal to all segments of the population, but particularly to businessmen and farmers. He and his party have offered a program of economic expansion under close government supervision, reassessment of Occupation reforms and eventual revision of the constitution, gradual rearmament, and inter-dependence with the United States.

Peace and Prosperity

No doubt the most important reason for the strength of the conservative party and indeed of the democratic system itself has been that for more than five years the Japanese have been enjoying an era of peace and prosperity unprecedented in their history. The establishment of peaceful relations with their neighbors has required strenuous and patient effort. At the San Francisco Conference in 1951, Japan was reaccepted as a peaceful member of the world community by a number of western states. But most of Japan's neighbors in Asia as well as the states of the Communist Bloc did not sign the San Francisco Treaty. Separate negotiations had to be entered into with a number of states which had bitter memories of the war and high demands for reparations. Gradually relations were established with Nationalist China, then with Burma, Thailand, the Philippines, and finally in 1958 with Indonesia. Of the non-Communist states only the Republic of Korea remains unyielding. Of the Communist states, the Soviet Union finally agreed to a peace declaration with Japan in 1956, in accord with which Japan also won admission to the United Nations.

Serious international problems still plague Japan. The peace declaration did not settle all issues with the U.S.S.R. The question of what kind of relations to develop with the other states of the Communist Bloc, particularly mainland China, is pressing. Korean claims and sensibilities have still to be pacified. Military relations with the United States require constant attention, as do trade relations with all countries. But Japan has been making satisfying progress in its international relations, and without the expense of supporting a large military establishment.

In the decade from 1946 to 1956 the Japanese achieved an average annual rate of economic growth of 11%, a figure unprecedented in all Japanese history and probably the highest in the world. Although such a rapid rate is hardly likely to continue, the Japanese Economic Planning Agency estimates that at least for the next ten to fifteen years a rate of growth of possibly 6% to 7% is essential.

Such a growth is needed to keep up with

the expanding population, which now totals more than 90 million and is expected to add 600,000 to 700,000 new workers to the labor force each year. It is necessary also if social tensions are to be relieved by a more equitable distribution of income. The Japanese economic structure is really dual. One half is pre-modern, very small-scale, mainly family enterprise and agriculture. Here the productivity and consequently the income per worker is very low. The other half is modern, large-scale enterprise, in which the capital investment is high and the productivity and income per worker is correspondingly high. Many Japanese economists feel that if Japan is to enjoy social stability it will be necessary in the coming years for the government to take special steps not only to support the expansion of big industry, but also to encourage a greater investment of capital and technology in the small enterprises, thereby increasing the productivity and income of their workers.

Step-up of Facilities Needed

To sustain such growth, increasing need is being felt in Japan to improve its transportation facilities, one of the most spectacular projects being a super-highway to be built from one tip of the islands to the other. Another need is to increase the production of energy. Ambitious attempts are being made to harness more water power, as, for example, the project of the Kansai Electric Power Company in the Jurobe Gorge, which is expected to produce 258,000 additional kilowatts. The peacetime uses of atomic energy are also being intensively studied.

Increased imports are essential to Japan's economic growth, for the islands are small and poorly endowed. The key problem is how to secure the foreign exchange needed to pay for them. During the first half of 1957 imports exceeded exports two to one forcing the government to place various restrictions on the trade. The gap was narrowed, but the year ended with a half-billion-dollar deficit in foreign exchange.

Japan is making every effort to expand its markets in the West. It has been admitted to GATT, but still suffers discrimination in the British market and on several occasions has taken the extraordinary step of itself limiting its exports to avoid a raising of the barriers in the United States.

Two other major markets beckon. One is south and southeast Asia, which the Kishi government has tried particularly to open up. Three obstacles have been met: distrust of Japanese motives engendered by the experience of the people of this region

with Japan before and during World War II, shortage of capital, and competition from Britain, West Germany, and others. To overcome the lingering suspicion, Prime Minister Kishi twice in 1957 toured the area on good-will missions. Partly to assuage the bitterness and partly, no doubt, to stimulate trade, the Japanese have sought steadily to negotiate reparations settlements, the latest being with the Philippines in 1956 and with Indonesia in 1958. In February, 1958, a \$50,000,000 loan was extended to India to finance the purchase of Japanese railway equipment and hydroelectric and thermal power generators. When Prime Minister Kishi visited Washington in June, 1958, he attempted to persuade the United States to provide the capital for a vast Japanese development program in south and southeast Asia. Since this did not materialize, increased attention is being given in Japanese financial circles to the need for Japan itself to provide more capital for the development of the region.

The other market which many Japanese are hopeful of entering more fully is mainland China. An important trading partner of Japan's before 1945, it has not recovered its pre-war position. Although Japanese trade with the mainland grew after 1951, it has remained smaller than that with Taiwan. One reason has been the restrictive policy of the Japanese Government, which enforced a partial boycott in accord with the policy enunciated by America during the Korean War. The steady relaxation of that boycott over the past few years and, finally, its major reduction in July, 1957, has not, however, led to a great expansion in the trade. During 1957 Japanese exports to Red China fell off 15% and imports fell off 21%.

Restrictions for Red China

A more important reason for the weakness of the trade has been the restrictive policies of the Red Chinese Government, which has been attempting to use the promise of this trade to force the Japanese Government to recognize it. In April, 1958, the Communist Chinese brought their campaign to a new climax by backing out of a barter-trade agreement negotiated with private Japanese trading associations in March, on the grounds that the Kishi government's refusal to accord diplomatic protection to a permanent Red Chinese trade delegation made the agreement impossible to execute. Limited trade continues on an individual barter basis.

In the spring of 1958 two other developments overseas had a singular effect on Japan's exports: the recession in the United States and the civil war in In-

donesia. The sale of textiles, steel, and other products fell off. Inventories grew, production was cut back. Failures of many small companies and growing unemployment were reported.

South Korea

The Republic of Korea, which governs 20 million Koreans south of the thirty-eighth parallel, has been struggling against enormous odds since its organization in 1948 to build a free and independent country. Its most pressing problem has been physical survival. Although military hostilities ceased with the signing of the armistice agreement by the U.N. and North Korean-Chinese Communist commands in July, 1953, the ROK did not sign the armistice and no peace settlement has yet been negotiated. Moreover, the Neutral Nations Supervisory Commission, which was charged to see that the conditions of the armistice were observed, has found it difficult to carry out inspection and a large military build-up is believed to have been effected in North Korea. Under these circumstances the Republic of Korea has felt it imperative to maintain an army of over 650,000 men and a small but growing navy and air force. In June, 1957, the way was opened to strengthen these forces as the U.N. Command announced that breaches of the armistice agreement by the opposing side freed it to equip its own men with more modern weapons.

The United States has given major assistance to the ROK military effort, but the financial burden imposed on the Republic has been almost intolerable. At the same time South Korea has been faced with staggering economic problems. Dislocations produced by the severance of ties with Japan, the division of the peninsula, and the destruction caused by the civil war have depressed all economic activity and made extensive government action imperative. Relief and reconstruction have gone forward; production, however, has increased little beyond the 1949-50 level and has hardly kept pace with the growth in population. Trade has been encouraged, but the traditional exchange with Japan has not been restored and the overall balance has been heavily unfavorable. Revenue from monopolies of salt and tobacco and a large variety of taxes has not been adequate. Nearly \$2 billion for relief and aid has been given since 1950 by the United States and the United Nations, but even this has been insufficient.

South Korea has tended to look to one man, Syngman Rhee, for leadership. As head of the Liberal Party and president of the Republic since its founding, Rhee has dominated nearly every phase of the

republic's politics. Yet Rhee has followed democratic forms and his opposition has worked within the democratic framework of the 1948 constitution.

Although more centralized in its controls over the police, local government, education, and the media of communication than the government of the United States, the ROK is much like the United States in its having a popularly elected national legislature (the National Assembly, consisting of a House of Representatives, with provision for the addition of a House of Councillors), a popularly elected president and vice president, and an independent judiciary. National elections have been vigorously participated in and spiritedly contested.

During his tenure Rhee has increasingly strengthened his control. In the national election of May, 1956, he was elected to his third four-year term by a popular majority of 55% of the total vote.

Outside Rhee's own Liberal Party the opposition has steadily increased. Left-wing parties have been severely hounded, but since 1955 moderate anti-Rhee elements in the National Assembly have built an increasingly effective Democratic Party. In the National Assembly elections on May 2, 1958, the Liberal Party won 125 seats as opposed to 79 for the Democrats, 28 independents, and one for the Unity Party; it failed to get the two-thirds necessary to amend the constitution.

The Chinese Republic on Taiwan

Although the Nationalist government of the Republic of China claims authority over the mainland and is recognized as the legitimate government there by the United States and the United Nations, in fact it has been forced to content itself with rule over its last refuge, the island of Taiwan, former colony of the Japanese Empire, home of nearly 10,000,000 Formosans of Chinese descent, aborigines, and refugees from the mainland. Here it has been able to maintain itself only by dint of its own great effort and the aid of the United States.

Consistent with its aspirations to return to the continent and threatened itself with attack from the continent, the Taiwan regime maintains more than 600,000 men under arms and skirmishes daily with Communist forces from the mainland opposite. Forced to withdraw from the Tachen and Nanchi Islands in February, 1955, it continues with American protection to hold on to the Quemoy, Matsu, and Pescadores islands in the Strait of Formosa.

Aid from the United States has also

made possible a steady improvement in the island's economic situation. Having completed a first Four-Year Plan for economic expansion, 1953-56, and now pursuing a second Four-Year Plan, 1957-60, Taiwan has been able in its agricultural production to more than keep pace with the growth in population, and since 1950 it has trebled the value of its industrial output. Contrary to the direction taken by the government on the mainland, it has done this while strengthening the private sector of the economy. In 1952 the government's share of the total value of all enterprises was roughly two-thirds. By 1957, partly by encouraging the development of new plants and partly by transferring the ownership of its own plants, it had reduced its share to about one-half. In this same period a land reform was executed by which the bulk of the land passed into the hands of the tillers.

Impressive as these accomplishments are, they have been inadequate to secure the self-sufficiency desired. Trade has been greatly expanded, especially with Japan and the United States, but the balance has remained consistently unfavorable. Capital needs of economic development are still too great to be met locally. Military costs far exceed revenues available to the government. The result has been steady inflation and continued dependence on American aid.

Chiang's Leadership

The extraordinary political stability maintained under these trying circumstances is the result largely of the leadership of seventy-two-year-old President Chiang Kai-shek and the loyalty to him of his Nationalist Party supporters. In 1949, when the generalissimo fled to Taiwan, he brought with him party headquarters, a large number of his personal followers, and the gold reserves of the central government.

While popular participation in government has been increasing, no strong opposition party has yet succeeded in organizing itself. Taiwan Communist and independence movements have been vigorously suppressed. Most anti-Chiang leaders in the Nationalist Party who have not defected to the Communists have gone into voluntary or forced exile. As the victories in the local elections in January, 1958, show, Chiang's Nationalists retain control. Consequently, political interest has centered on factional struggles within the Party. Shake-ups in the military high command in 1956 and 1957, and in the cabinet in 1958, are thought to be related to the increasing rivalry for eventual succession to the aging Chiang.

The Philippines

Emerging in 1946 as an independent state after centuries of Spanish and American colonial rule, the Philippine people have chosen to build a democratic society in close alliance with the United States. Except for the Communist-led Hukbalahap movement, 1946-50, no left-wing movement of importance has developed; and except for Claro Recto's plea for the "Philippines for Filipinos" in his unsuccessful bid for the presidency in 1957, no important leader has questioned this orientation to the United States.

The two most important political parties, the Nationalist and the Liberal, are both conservative and divide chiefly on personalities. The Nationalists are led by the sixty-two-year-old president of the Republic, Carlos Garcia, a man of long political experience in pre-war as well as post-war times, and by José P. Laurel, Jr., son of the wartime president and at present Speaker of the House of Representatives. Although in the elections of December, 1957, Garcia won the presidency with 41% of the popular vote, his running-mate, Laurel, failed of election. The successful vice-presidential candidate was the vigorous Diosdado Macapagal, a young Nationalist representative who has distinguished himself in recent years as a social reformer and a foreign-affairs expert.

In addition to a popularly elected president and vice president, the Philippine constitution, drawn up in 1935, provides for an independent judiciary headed by a Supreme Court, and a popularly elected Congress of two houses. In the 1957 elections Garcia's Liberal Party succeeded in retaining not only the presidency but majority control in both houses as well.

The most pressing problems facing the young republic are economic. They result largely from two causes: the great destruction wrought during World War II (Filipinos estimate damage by the Japanese at \$8 billion) and the gradual imposition of tariffs on Filipino goods entering the American market. During the years of its colonial administration, the United States permitted Filipino goods to enter duty-free. As a result the Filipino economy developed chiefly to supply money crops to America—notably copra, sugar, tobacco, and abaca. Food and industrial goods were bought abroad with the proceeds and needed public services were supported with the revenues. Since the grant of commonwealth status to the islands in 1935, however, it has been United States policy gradually to end this preferential tariff treatment. In order to do so it has provided—for example, in the Tydings-McDuffie Act of 1934, the Trade Act of

1946, and the revision of that act in 1955—that tariffs shall be applied on certain Filipino goods imported in excess of fixed duty-free quotas, these quotas to be reduced at a regular rate until abolished completely in 1974. Unprepared yet to compete without preferential treatment, the Filipinos have suffered a sharp reduction in their exports.

Efforts are being made to offset this by stimulating the domestic production of commodities formerly imported. Diversification of agriculture is being pushed. Particular attention is being given to the growth of food crops, especially rice, for local consumption. Great hope is placed in the Agno River power and irrigation project in central Luzon. A variety of industries are also being promoted to reduce the Philippines' dependence on imports and to find substitutes for dwindling agricultural exports. But import needs continue high and capital for domestic economic development is short. The Filipino government, particularly under Magsaysay and Garcia, has inaugurated strict trade controls and a domestic austerity program. And the United States has given substantial aid, the latest being the agreement to loan an additional \$125 million, negotiated by President Garcia on his visit to Washington in June, 1958. But the solution to the quest for economic independence is not yet in sight.

Militarily, the islands have relied for external defense on the United States, which secured the leasehold of a number of bases when independence was granted. In 1951 a mutual defense pact was signed with the United States and in 1954 a joint Philippines-United States defense council was set up to implement the arrangement. While the status of these bases and jurisdiction over the forces on them continue to be sources of friction, in 1956 the Philippines agreed to contribute to their maintenance.

Communist China

While the Nationalists hold on to the island of Taiwan, since 1949 the more than six hundred million Chinese on the mainland have fallen under the sway of the Communist rulers in Peiping. How do these Chinese Communists exercise their control? What do they seek? What problems do they face?

The primary instrument of leadership and control is the Communist Party of China. As the party constitution of 1956 declares: The CPC "leads the masses in active participation in the life of the state." Everywhere "in economic enterprises, villages, schools, and military units, the basic party organizations see to it that

government organs carry out the decisions of higher party and government offices." While a number of so-called "minor parties" are permitted to exist, such as the Revolutionary Committee of the Kuomintang and the China Democratic League, none of them enjoys any power.

To accomplish its aim to lead the vast population of China, the Communist Party has needed to expand its membership rapidly. Most members have joined the Party since the take-over in 1949. In March, 1957, it was reported to number 12,000,000 members, making it the largest Communist Party in the world. While it claims to be the "vanguard of the Chinese workers' class," it actually includes few industrial workers in its ranks. The great bulk of Party members has been drawn from the peasantry. Many probably were indoctrinated and brought into the Party while serving in the armed forces.

In welding this large membership into an elite corps the CPC has adhered faithfully to the Leninist precept of "democratic centralism," according to which

the individual must obey the organization, the minority must obey the majority, lower echelons must obey higher echelons, and the entire Party must obey the basic principles of the Central Committee.

The members of the Central Committee are a remarkably homogeneous group. Of the ninety-seven members of the present CC, nearly all have come from the middle and upper-middle strata of the old Chinese society, especially from landlord and prosperous peasant families. Over half have come from the same region—central China; indeed, nearly one-third come from Hunan, the home province of Mao Tse-tung. Nearly all have had some formal education. More than one-third of them have studied abroad, especially in the U.S.S.R. Most of them joined the Party in their teens and early twenties and have served their adult lives as political commissars, military commanders, or organizers within the ranks of the Party. They are men of conviction, experience, and discipline, who have known each other a long time and apparently work well together.

At the top is Mao Tse-tung, sixty-four-year-old son of a Hunanese peasant who as a student at Peking University in 1921 helped to found the Chinese Communist Party. He rose rapidly through propaganda work and organizational activity among the peasantry. In the early 1930's the inadequacies of the Moscow-directed leadership and the success of Mao in establishing a political-military base in Kiangsi caused the Party to make Mao its leader, a position he has held since.

Rigid Party Discipline

Beside their common experiences and their common interest in exercising authority, party members appear to be held together by basic ideological agreement and rigid party discipline. As the party constitution of 1956 states, the party is based on "Marxism-Leninism, historical materialism," modified to meet Chinese circumstances. Since all "correct" doctrine as well as all "correct" action by definition emanates from the Central Committee, it is natural that this Sinicized version of Marxism-Leninism should be praised throughout China as "the thought of Mao Tse-tung."

To an outsider it appears that, in most fundamental theories, Chinese Communist spokesmen adhere closely to the Marxist-Leninist line followed in the Soviet Union. The same classics are read, the same theories of revolution, party, and imperialism are expounded. Lenin's emphasis on tactical flexibility is admired but the model for the Communist state is found in Stalin's totalitarian institutions.

On the other hand the "thought of Mao Tse-tung" is no simple reiteration of Soviet Communist dogma. The building of a Communist Party on a peasant base, while unrecognized in theory, proved to be highly effective in practice. Mao's concept of a "new democracy," one in which a coalition of classes could build a mixed bourgeois-socialist society, differed from the orthodox concept of "proletarian dictatorship." Nevertheless, it proved much more acceptable to the intellectuals and property-owners of China, whose support in the beginning was found to be necessary. In fact, the relationship between economic classes, political attitudes, and political parties, which orthodox Marxists maintain is indissoluble, seems not to strike Mao with the same force. In his speech in 1957, entitled "Let One Hundred Flowers Bloom, Let One Hundred Schools of Thought Contend," for example, he again showed his independence by arguing that people of different classes were not fated inevitably to conflict with each other, but in fact could be persuaded to share the same political attitudes. In another speech, on "Contradictions," also in 1957, Mao asserted that even in a "socialist" society serious differences may develop between the "vanguard" and the "masses" and that the "vanguard" as well as the "masses" may need re-education.

Control of Information Media

The Chinese Communist Party has sought to insure ideological conformity and obedience primarily by persuasion.

Chief devices have been a controlled flow of information through the schools and media of communication and so-called "rectification campaigns." The latest was that inaugurated by Mao's "Hundred Flowers" speech. In this, as in earlier campaigns, the tendencies needing reform were pointed out by party leaders, primarily Mao Tse-tung. A number of texts were then specified for intensive private and group study. Study periods were followed by searching criticism, by Party members, of themselves and of others. The campaign ended with action to meet these criticisms.

Where persuasion is ineffective, however, the Party leaders have not hesitated to purge their opponents. Moreover, Party members are kept under constant surveillance. The control commissions on each echelon keep a careful audit of party activities and the Social Affairs Department of the Central Committee seems to function as a Party police. The Public Security Ministry seems also to survey Party members, for in February, 1958, it reported that between June, 1955, and October, 1957, some 5000 "counter-revolutionaries" had been found in the Party and another 3000 in its subsidiary, the Communist Youth League.

The Party makes its will felt in a number of ways. Basic policies are decided by its Central Committee. They are put into effect at the top by the CC members themselves, who, by dint of multiple office holding, occupy nearly six hundred of the key posts in every important national organization. They are acted on locally by party members and cadres who play a leading role in all local organizations. The acquiescence of the people is won by controlling their information, by waging intensive propaganda campaigns called "drives," and ultimately, if necessary, by coercing them through an intricate system of military and police controls.

The most important instrument, of course, is the government. According to the Constitution of 1954, "democratic centralism" is the guiding principle of organization for government as for party. Four echelons of government have been set up corresponding to those in the Party. The same congress-committee system is found also in the government: people's congresses at each level elect people's councils on their own level and people's congresses on the next higher level. People's congresses also share in the supervision of the activities of the militia, army, and public security forces at each level. Of course, real administrative power is concentrated in the councils, which must obey directives of higher councils on up to the State Council in Peiping. Similarly,

various echelons of procuratorates are responsible ultimately to a Supreme People's Procuratorate in Peiping and people's courts, to the Supreme People's Court. Control of the armed forces is likewise concentrated in the central Council of National Defense. Each of these central organs is responsible ultimately to the National People's Congress, but in such a way that none is beyond the influence if not under the direct authority of the chairman of the central people's government, Mao Tse-tung. And all are controlled by the members of the Central Committee of the Party.

Concentration of Power

It is a government in which power is concentrated to an extraordinary degree, enabling the party to manipulate it at will. It is also one which makes a pseudo-democratic appeal by providing for popular elections for local people's congresses and indirect elections for all other congresses and councils. While no real choice is offered, these elections seem to give the great mass of the people a false but desired sense of political participation. In addition, the campaigns which accompany the elections have been used effectively by the authorities to popularize their programs and to measure public reactions.

Controlled elections are but one of the instruments used by the Chinese Communists to reach the masses. More important for this purpose are the so-called mass organizations, which take the place of interest groups which develop in a free society. Outstanding examples are the All-China Federation of Trade Unions, the Communist Youth League, the All-China Federation of Democratic Women, and the Sino-Soviet Friendship Association. It is not too much to say that nearly everyone in China is involved in or is at least influenced by one or more of these bodies.

Like the Party and government, the mass organizations operate on the basis of "democratic centralism," so that they are controlled by their central executive committees, which in turn are led by party members. The specific purposes of these organizations vary, but all carry out government policies and enlist the support of their members in nation-wide "drives" or campaigns, such as the agrarian reform movement, the "Hate America Aid Korea" movement, the literacy campaigns, and the repeated "rectification" movements. They are powerful instruments of civilian mobilization.

The main channel of communication is the centrally controlled radio and press. The nerve center is the editorial office of the *Jen Min Jih Pao* (People's Daily),

which runs not only the *Daily* itself but disseminates the official views of Party and government leaders via Radio Peiping and the Hsin Hua (New China) News Agency.

Of course, to restrain recalcitrant members of society, there are the politically controlled courts and the public security forces, which are assisted in the cities by so-called urban inhabitants teams, into which all households are organized and which perform police as well as other duties for the state. To handle large disturbances there is available a massive militia and the regular forces of the People's Liberation Army, units of which are garrisoned in every province.

Entire Economy Directed

The Communists have also brought the entire economy under their direction. This direction is characterized by planning and collectivization. Planning boards were set up in nearly every government agency shortly after the take-over in 1949, but the predominance of private ownership and the runaway inflation made effective planning impossible. In 1952, after the inflation had been brought under control, a top-level State Planning Commission was set up and ordered to prepare the First Five-Year Plan, announced for 1953-57. The enormous difficulties inherent in such a project, however, delayed its formulation. In fact, no over-all plan was adopted by the National People's Congress until July, 1955. Now a Second Five-Year Plan is underway to guide development from 1958 to 1962.

Plans without controls would be useless. In the agrarian sector the Communists moved slowly, winning wide support by carrying out redistribution of the land. Then in 1953 the Party called for gradual conversion of private holdings into cooperatives and establishment of a few model collective farms, the announced goal being to complete collectivization in 1967. But Party activists were so successful that the program was speeded up. By July, 1956, it was announced that roughly two-thirds of the Chinese farming households were in collective farms and slightly less than one-third in producers' cooperatives. All private farming was to be eliminated by 1958.

In business and industry the Communists initially took over many enterprises from the Kuomintang, including all those formerly owned by the Japanese. They placed stringent controls over private enterprises and then cajoled or forced many of them into reorganizing as joint public-private businesses, in which dividends continue to be paid to private stockholders but in which control is transferred to the

state. Others were taken over as state-owned enterprises. By 1952 most heavy industry and foreign trade had been nationalized. In 1956 it was announced that virtually all private business had been eliminated, including banking, industrial, and commercial enterprises, and even handicraft production had been made cooperative. Thus, by the end of the First Five-Year Plan, practically the entire economy had been collectivized.

To what end and how successfully has the Chinese Communist Party used its economic controls? Fundamentally, it has been seeking to modernize China by following the Soviet model of emphasis on heavy industry. The Party's main aim has been to double the gross industrial production during each of its five-year plans by investing state capital primarily in producers' goods industries. According to the State Planning Commission, by the end of the First Five-Year Plan in 1957, a total of 825 industrial construction projects was begun, 448 being completed. Steel output was increased from 1½ million tons in 1952 to 5¼ million tons in 1957. Overall industrial production was raised to 223.4% of that in 1952. The chief increase was registered in capital goods industries, consumer goods production having increased (to 179.4% of that in 1952), but not at the same rate.

Five-Year Plan Ambitions

Goals for the Second Five-Year Plan, 1958-62, are equally ambitious, the long range objective being to equal Britain's industrial production in fifteen years. As the first year under the Second Plan, 1958 has been termed the year of the "big leap forward." The Chinese people are being called on to make extraordinary efforts to expand production. The aim for the year is to increase the industrial output by 14.6%. The chief stress is still on capital goods production, which it is proposed to raise 18.8% as compared with 9.7% for consumer goods production. But emphasis has been shifted from the construction of large-scale plants under central control to development of medium and small scale facilities under local authority, first in light industry, food, textiles, and construction.

These industrial gains have been made largely at the expense of agriculture and therefore of the vast majority of the Chinese people, of whom more than 80% live in the villages. Demands on agriculture during recent years have been severe. To secure raw materials for China's expanding industries and to secure capital for industrial development, during the last few years of the First Five-Year Plan the state

is estimated to have extracted by taxation and forced sales up to one-third of the farmers' total product. In addition to meeting these heavy exactions, China's farmers have also had to increase production simply to supply essential food for the expanding population, which is today approximately 650 million and growing at the rate of 2.2% or 13 million people annually. Natural calamities, especially large floods in 1954 and 1956, have added to the farmers' problems. It is not surprising that these economic pressures plus the social dislocations accompanying collectivization have produced widespread peasant discontent and stimulated both the withholding of grain and exodus to the cities.

The central problem, of course, is production. Since the state has used most of the "surplus" extracted from the countryside to develop industry, there has been little capital available for investment in agriculture. Expanded production has been sought chiefly by enlarging the area under cultivation. Large irrigation and flood control projects have been undertaken and repeated "drives" for improved manure collection, pest control, etc., have been launched. The result has not been impressive. During the First Five-Year Plan, the output of food grains, for example, is said to have grown at an annual rate of only 4.3%. Even this may be too high a figure since the greatest increases were registered in the early years when statistical methods were not well perfected. Moreover, the rate has been declining. The grain crop of 1957, for example, was about 185,000 tons; and although it was the largest in China's history, it represented the smallest rate of increase over the previous year of any year under the Plan.

These data show that collectivization of the land has not solved the problem of increasing China's agricultural production and that greater attention is going to have to be given by China's leaders to rural problems. State grain collection already has been slightly eased. Travel restrictions have been tightened. Hundreds of thousands of urban Party and government officials have been reassigned to rural areas. Other measures may have to be taken.

While the strains imposed on China's rural millions have been severe, it must be recognized that the overall national income of Red China appears to have gone up each year by about 9%. This has meant a per capita annual rise in income of 6-7%. When compared with the economic gains of postwar, democratic Japan, China's achievements are not so impressive; but, when compared with the long years of relative stagnation in China's past, they are impressive indeed.

While there is no accurate way to measure the true feeling of the Chinese people toward the Communist regime, reports from the mainland indicate scattered resistance from a number of groups. The non-Han Chinese have been particularly troublesome. The nearly 3 million Tibetans have proved recalcitrant. To conciliate them Peiping announced in April, 1956, that Tibet would be given regional autonomy and Chinese troops and party cadres would be withdrawn, and a number of executions has been announced from Peiping. Particular attention in 1958 was also given to intellectuals; a new course on Communist thought was introduced into the compulsory school curriculum. On the other hand, the regime seems determined to stamp out all opposition and appears stronger with each succeeding year.

North Korea

In North Korea, which embraces about half of the territory and about one-third (some 12 million) of the people of Korea, the Communists and their supporters have been building a new order, with the close guidance and help of the Soviet Union, Communist China, and other members of the Communist Bloc. Although several political parties are tolerated, including the Democratic Party and the Heavenly Way (Chondokyo) Young Friends Party, the dominant party is the North Korean Workers' Party, which is controlled by Kim Il-song and other Communist leaders. Generally in accord with the political pattern of the so-called "people's democracies" of eastern Europe, the highest organ of the state is legally a Supreme People's Assembly and its Standing Committee, which is chaired by Kim T'u-bong. Executive authority is exercised by a twenty-four-member cabinet under Premier Kim Il-song and five vice premiers.

While the Workers Party and the government claim to be independent, there is good reason to believe that North Korea is more or less a ward of the Communist Bloc. Militarily, of course, the regime was saved by Red China's intervention in the fall of 1950. Even after the truce the Chinese "Volunteers" stayed on to supplement as well as build up the North Korean forces and probably to exercise a general influence, over the regime. In the spring of 1958 the Red Chinese announced that they had begun to move out the "Volunteers" and that they would complete their withdrawal by the end of the year. It may be that the North Korean forces have been so strengthened that they are believed now capable of defending or extending the regime themselves.

Economically the regime is reported to

have received aid from eight of the Communist Bloc states, the largest grants coming from the Soviet Union and Communist China. This aid may well have been decisive, for North Korea has faced desperate economic problems. It has never been a self-sufficient area. Although rich in minerals and natural facilities for generating water power, it is relatively poor in arable land.

As is the habit of Communist-led governments, the North Korean regime has tried to rebuild and modernize its economy according to plan. In April, 1954, the Supreme People's Assembly approved a Three Year Plan. In its industrial phases, the Plan called for large-scale development of the metallurgical, machine, electrical, chemical, mining, and construction industries. While intelligible data are lacking, it was announced that by the end of 1956 the industrial production goals of the Plan had been overfulfilled by 14.4%, raising the 1956 total to 1½ times the level of 1949. At that time it was also announced that state-owned and cooperative enterprises accounted for 97-98% of the 1956 total, showing that socialization of industry was virtually complete. In the agricultural phases of the Three Year Plan, the restoration and expansion of irrigation facilities, the increased use of chemical fertilizers, and the raising of livestock were charted. It has been claimed that by 1956 farm production was 10.4% greater than in 1948. Socialization of agriculture appears to have proceeded at a slower pace than that of industry. By 1955 only half of the farmers were claimed to have entered cooperatives.

Likewise in diplomacy North Korea has given little evidence of independence. It is recognized only by the members of the Communist Bloc. In its foreign policy it has fitted its pronouncements to those of the Soviet Union and Communist China. The possibility of negotiating a truce in the civil war was suggested by the Soviet Union. And it was Communist China's Chou En-lai who, on a visit to Pyongyang in the spring of 1958, most recently reasserted the policy North Korea follows in regard to the problem of unification: he called for all foreign troops to be evacuated from the peninsula as preliminary to an all-Korean election to establish a new, unified government.

Forging the New Regimes

While imperialism and revolution for more than a century had been melting down the traditional ideas and institutions of the old Far East, it was not until the China Incident, World War II, and its

aftermath that the "new" Far East as we know it today was forged. Out of that holocaust, which began in 1937, and the wars and occupations which followed, the long Chinese civil war and international rivalry in China was ended; the Japanese Empire was destroyed and the Japanese people were forced into democracy; the Korean people were liberated at last, only to be torn asunder by civil war and intervention; the Philippines were given their independence; and the long line of western contenders in the Far East narrowed down to the Soviet Union and the United States.

The lack of authentic records and the partiality and spottiness of available eyewitness reports make any explanation of the Communist victory in China doubtful at best. Certainly the responsibility assigned to the United States by some Nationalist partisans in America has been out of all proportion to the magnitude of events far beyond such external control. This is not to say that the United States played an insignificant role. It was extraordinarily active, intervening more deeply and assuming heavier responsibilities in China from 1941 to 1946 than in any other friendly country in all its history.

Although the Chinese Communists had entered a "united front" with the Nationalist Government in 1937, there was no real settlement of political issues between them. Relations soon grew cold. Troops needed in the war against Japan were drawn off by both sides to blockade each other. When the United States entered the Pacific War in 1941, it was deeply concerned to bolster China's war effort. To this end it sent massive aid and, acting through General Joseph Stilwell, General Patrick Hurley, and others, it attempted to persuade both Communists and Nationalists to abandon their blockade, submit their troops systematically to retraining, and accept American command. But negotiations for this purpose were largely fruitless. Neither side trusted the other or saw the need for compromise. The Communists insisted on the prior formation of a coalition government. The Nationalists demanded that Communist troops first be placed under Nationalist control.

Perils Loom After War

As World War II ended the situation became even more explosive. The Russians occupied Manchuria and the Japanese were prepared to surrender vast expanses of strategic territory and huge supplies of arms. The American reaction was to continue aid to the Nationalist Government, particularly in transporting its forces to take over large areas in North China hith-

erto occupied by the Japanese, thereby strengthening its military position, but at the same time to send General Marshall in 1946 and then Ambassador Stuart to seek through mediation to achieve the "unification of China by peaceful, democratic methods." Agreement was reached on a temporary truce and a military reorganization plan, but no solution could be found to the bitter political rivalry. The Nationalists and their supporters went ahead to draw up a new constitution and on the basis of national elections established a new government in 1948, but the Communists and their supporters refused to participate. Full-scale civil war had already been resumed. In 1949 the Nationalist government fled to Taiwan, leaving the mainland to the victorious Communists.

Thus, while the United States had not thrown all its weight behind the Nationalist regime, it had intervened as deeply and as sympathetically as it could without sacrificing its chosen role as mediator. And yet it had failed. Some have charged that the explanation is to be found in Soviet aid to the Chinese Communists, but this was remarkably small. The real key to Communist victory would seem to be in China itself: in the chaos caused by a century-long disintegration of the traditional fabric of society and government; in the failure of the Kuomintang either to capture the imagination of the people by attending to their desperate social and economic problems and challenging them with new ideas and ideals, or to build a disciplined party and army able to expel the invader and unify the country; and in the success of the Communists ultimately to do both.

Korea Planning Absent

The planning, both American and international, which preceded the occupation of Japan was totally absent in the case of Korea. Except for the agreement at Cairo in 1943 that "in due course" Korea would be independent, no plans were made. It was solely for the purpose of receiving the Japanese surrender that the thirty-eighth parallel was established as a line of demarcation between the northern zone, which the Soviet forces occupied, and the southern zone, which the Americans occupied; and it was largely without foresight, at least on the American side, that life in the two zones came to be sharply differentiated. At the Moscow Conference in 1945 the two "super-powers" agreed to establish a joint commission to unify the two zones under a provisional Korean government supervised by a four-power trusteeship. But the two military commands could never agree on how this was to be done. The Americans in the south,

mindful of the political inexperience and ideological disunity of the Korean people, drifted into a military occupation. The Russians in the north took the opportunity to encourage the Koreans sympathetic to Soviet views to set up their own administration, dominated by a single, Communist-led party, and supported by a strong North Korean militia. By 1947 each power wanted to get out, but without of course sacrificing advantages to the other. Confident of the effectiveness of the new organizations in the north, the Russians were prepared to have both powers withdraw and leave the unification of Korea to the Koreans. The Americans feared the results of such a course and instead turned the entire problem over to the General Assembly of the United Nations.

The United Nations responded by voting to hold elections in Korea for an assembly which would be empowered to draw up a constitution and establish a government for the entire peninsula. The Soviet Bloc, of course, objected and refused to permit the U.N. representatives into North Korea. As a result, elections were held in South Korea only and a new Republic of Korea was established in 1948 with actual authority over South Korea only. In the north a rival "People's Republic" was formed. In the following year both Soviet and American forces were withdrawn. American aid to South Korea dwindled and in January, 1950, Korea was declared publicly to be no longer within the perimeter of United States' primary defense concerns.

Thus, at last, after generations of domination by foreign powers, from China and Japan to the United States and the Soviet Union, the Koreans were free to act in their own interests as they saw them. Unification was their first demand but the inevitable question was still: unification under whom? On June 25, 1950, the North Korean regime attempted to solve the problem by launching, undoubtedly with the approval and support of the leaders of the Soviet Bloc, a full-scale attack on South Korea.

The Korean War

The consequences of this attack were momentous. It brought about the immediate intervention of American forces, together with those of certain other powers with the official support of the United Nations, on the side of the beleaguered Republic of Korea. Their aim, at first, was simply to defend the integrity of the Republic in the south, but, by October, military successes led General MacArthur to demand the unconditional surrender of the North and the U.N. General Assembly to call for the establishment of a "unified,

independent, and democratic government" over the entire peninsula.

At this point the problem was compounded by the counter-intervention of the Communist Chinese, who saw the imminent destruction of the North Korean regime as a threat to their own interests. Chinese "volunteers" were rushed across the Yalu. With their support, the North Koreans rolled back the U.N. forces to the vicinity of the thirty-eighth parallel, but their attempted offensive in the South was no more successful than that of the U.N. in the North.

It was in consideration of this military stalemate and the possible cost of an expanded effort in terms of the world position of the powers and of the threat of

world war that the intervening sides came to consider the desirability of compromise. Nevertheless, it took two years of trying negotiations before an armistice agreement could be reached in 1953; and the reluctant compliance of the South Korean Government was secured only in exchange for a defensive alliance with the United States. The fact was, however, that neither Korean regime was yet prepared to lose its leadership for the sake of unification. When the eighteen belligerents, including the U.S.S.R., finally sat down in Geneva in April, 1954, to discuss a political settlement, the two sides could not agree. Divided Korea remains, like divided China, Indo-China, and Germany, a festering sore on the cold-war front which divides the world.

MOUNTING CRISIS IN THE MIDDLE EAST

By

J. C. HUREWITZ

Professor of Government, Near and Middle East Institute, Columbia University

IF AMERICANS entertained any lingering doubts on how sensitized the government in Washington had become to affairs in the Middle East—an area that stretches from Libya, Egypt, and Sudan to the eastern frontiers of Iran in non-Soviet southwest Asia—these doubts should have been dispelled in mid-July, 1958, when insurgent army officers overthrew the Hashimi monarchy of Iraq. For on the next day American marines, under orders from President Eisenhower, sloshed ashore on the sun-beaten beaches south of Beirut, the capital of nearby Lebanon. Even more of a surprise than the Iraqi revolt itself, the unprecedented American action to shore up the tottering Western position in the Middle East was followed on successive days by the fluttering down of British paratroopers in the other Hashimi kingdom, Jordan, and by the hasty journey of President Gamal Abdel Nasser of the United Arab Republic to Moscow to confer with Soviet leaders. Premier Khrushchev promptly tried to turn the episode to Russia's advantage by branding the United States along with Great Britain as aggressors whose actions threatened to engulf the world with disaster. Efforts to deal with the issue in the United Nations Security Council or by convening a summit meeting proved stillborn. On August 8, the United Nations General Assembly held the Third Emergency Special Session in its history (four of the five special sessions

ever held by the General Assembly dealt with the Middle East). In a surprising display of unity on the part of the ten Arab countries in the Assembly, a resolution presented by them was adopted unanimously (80 to 0 with the Dominican Republic absent). The resolution called on members of the Arab League to observe the pledge of non-interference in one another's internal affairs contained in the League Pact and requested U. N. Secretary-General Hammarskjöld to make "such practical arrangements as would adequately help in upholding the purposes and principles of the Charter in relation to Lebanon and Jordan in the present circumstances so as to make possible the early withdrawal of foreign troops from the two countries." Hammarskjöld was also invited to study in consultation with the parties concerned the creation of an Arab economic development institution.

Beneath the surface of the recurrent Middle East upheavals since 1945, there appeared a pattern of mounting crisis that to all appearances had not yet reached its fullest intensity. As recently as World War II, the Middle East still lay securely within the Western—chiefly British—orbit. By a diverse yet flexible system of interlocking political and military controls that honeycombed the region, the United Kingdom had been able to harness the Middle East to the Allied war effort. But in the short space of a dozen postwar years this im-

perial system, which had taken a century and a half to erect, was shattered almost beyond recognition. To this decline the latest Iraq revolt practically dealt the *coup de grâce*. While not responsible for the toppling of Britain from its military and political eminence in the Middle East, Stalin's successors nevertheless lost no opportunity to exploit the situation. In the face of the menacing rise of Soviet influence, particularly in the Arab zone, the melting away of British power has left an unprepared and an unwilling United States with the primary responsibility for defending Western interests in the region.

Vital to West's Security

A glance at the map will readily disclose the strategic centrality of the Middle East for American security planners. Lying at the juncture of three continents, the Middle East can function either as a bridge or a barrier in international communications. This was demonstrated dramatically by the blockage of the Suez Canal for nearly half a year in the crisis of 1956-57. From its opening in November, 1869, to October, 1956, the canal served as the main transportation artery between Europe and Asia and Africa. It became, indeed, the world's most heavily traveled sealand by 1956, when in the first nine months an estimated 15% of the total international ocean-going traffic passed through the man-made ditch. By 1958, the movement of ships through the canal had returned to the pre-crisis rush, except that the conditions for transit were laid down unilaterally by Egypt without binding international agreement or control.

Through the Suez Canal have funneled chiefly raw materials from Asia and Africa and finished goods from Western Europe. Crude oil, most of it destined for our trans-Atlantic allies, accounted for about two-thirds of the Suez shipping. Petroleum grew steadily in importance as a source of energy in postwar Western Europe and by 1958 furnished nearly one-fifth of its over-all energy needs. Three-fourths of this oil was imported from the Middle East. Thus the military establishments of the NATO community and an ever-widening segment of its basic industry depended on Middle East oil. Nor did the postwar experiments in harnessing atomic energy, whose promise to mankind of untold new sources of power seemed close at hand, imply any absolute decrease in the future demand for petroleum products.

Middle East oil output rose from 8.1% of the non-Soviet world's total in 1945 to a yearly average of more than 25% in April, 1958. Of even greater significance the estimated petroleum deposits in the

region multiplied from 19 billion barrels, or 38% of the non-Soviet world's total in 1945, to 169.5 billion or over 70% twelve years later. In the United States in 1957, the continental and offshore proved reserves did not exceed 35 billion barrels, or roughly only two-thirds those in the tiny sheikdom of Kuwait.

Virtually all Middle East oil is being developed by companies of Western nationality, which by the end of 1957 had invested more than \$3.1 billion in fixed capital assets. Of this sum, almost one-half represented investment by United States companies, whose share—under prevailing concessions—of the estimated petroleum stores approached 60% of the regional total. The companies and the governments since 1950-52 have been sharing the profits equally. The direct revenues accruing to each in the Middle East as a whole in 1957 approximated one billion dollars, contrasted with \$940 million in 1956 and \$880 million in 1955. The fifty-fifty payments structure was being threatened in 1957-58 by the arrival in the region of new companies—American as well as Italian and Japanese—offering up to 75% of the profits to the host governments. But the impact of this development would not be felt until the newcomers discovered oil and started commercial production.

A more immediate danger stemmed from the fact that the major producing fields lay in countries adjacent to the Persian Gulf, four-fifths of the established reserves concentrated in Arab lands. Non-Arab Iran, the principal producing state before the Anglo-Iranian oil dispute (1951-54), recovered quickly after the settlement, so that by 1957 it was exporting an average of 717,500 b/d (barrels per day) or roughly 60,000 b/d more than in 1950, the last year of uninterrupted production before the crisis. But Iran in 1957 ranked third after Saudi Arabia with its average output of 1,209,757 b/d and Kuwait with its 1,177,150 b/d. In the Arab East are located not only the lion's share of proved Middle East oil deposits but also the routes of oil transit—the Suez Canal, and the pipeline systems that crisscross the non-oil-producing states of Jordan, Lebanon, and the Syrian region of the United Arab Republic—to Mediterranean and European markets.

On these routes and sources of supply rested the fueling of the NATO machine, the kingpin of the collective security system that the West has forged in defense against an expansive Soviet Union. Yet without an effective substitute for the defunct British imperial system, the United States was ill-equipped to serve as custodian of Western interest in so vulnerable a region. This helps explain the continuing

ambivalence of the United States toward Arab nationalism.

Arab Unity Nationalism

Arab nationalism is essentially a twentieth-century phenomenon. Nationalism came to Egypt, it is true, as early as the 1870's. But that was Egyptian, not Arab, nationalism. Indeed, Egyptians did not identify themselves in the nationalist sense with the rest of the Arab world until the late 1930's, when the Palestine problem began to provide a political focus for Arab nationalists everywhere. Even then the identification, official and public, spread slowly.

The hatred engendered in the Arab world against Zionism and Israel in the years following merely constituted the most extreme expression of a general sense of disillusionment in Europe that bred anger and hostility. Arab outrage, primarily in the Fertile Crescent (as the area encompassing present-day Iraq, Syria, Lebanon, Jordan, and Israel is known), was itself a product of the relatively brief experience with British and French mandatory rule after World War I. Arab nationalists viewed Zionism and Israel as an unwarranted intrusion and a beachhead, not of democracy, but of European imperialism. And because Israel was situated in the Fertile Crescent, these emotions mingled with the obsessive preoccupation with schemes for Arab unity that abounded in that particular area.

Nor is it surprising that the Arab League, the first unity project that saw the light, served from the outset as an agency of Egyptian foreign policy. The most populous Arab country, Egypt became the nub of Arab cultural life, providing leadership in religion, education, the professions, and, most recently, military organization.

The military junta that overthrew King Farouk in 1952 launched a comprehensive revolution in the internal life of Egypt but preserved the essential features of the external Arab policy. Under the aegis of the youthful army officers, the policy prospered as never before. With the aid of former Nazi German propaganda technicians, Radio Cairo became, after 1954, a potent force from one end of the Arab world to the other and played a major role in building President Nasser as the personification of Arab unity.

What particularly endeared him to the Arab masses was his seeming ability to trade body blows with the great powers of the West. Nasser first left Egypt in his official capacity as head of state in April, 1955, to take part in the Conference of Asian States at Bandung where he met

Jawaharhalal Nehru of India and Chou En-Lai of Communist China. From this time Nasser became an advocate of "positive neutralism" for Egypt and the Arab world. For him, as attested by later developments, this meant the acceptance of aid from the Soviet bloc to kick over all the traces of Western interests and influence in the Middle East.

Arms from East Bloc

Nasser's meteoric rise to fame in the Arab East started with his signing in September, 1955, of an arms deal with Czechoslovakia and the U.S.S.R. and reached its initial peak with the nationalization in July, 1956, of the Suez Canal Company. Egypt's military debacle in the Sinai desert at the hands of the Israeli Forces in the fall of 1956 and the absence for more than a year of new grand gestures of defiance temporarily checked the further growth of Nasser's popularity. This was illustrated in Jordan in April, 1957, in the backfiring of Egyptian efforts to suborn army officers and foment public rebellion against the monarchy. Young King Hussein emerged, for the time being at least, in firmer control than ever before of his almost landlocked country. Even as late as the following November, Radio Cairo, with an assist by Radio Damascus, proved incapable of goading Jordan's urban mobs into action. Further proof of Egypt's temporary eclipse could be found in this period in the willingness of all other Arab states except Syria and Yemen to resist the blandishments and pressures emanating from Cairo. Early in 1957, Iraq undertook with Western guidance to jam Cairo's anti-Western broadcasts and to initiate pro-Western counterpropaganda. In March, 1957, Lebanon endorsed the Eisenhower Doctrine for the Middle East, while the next month Saudi Arabia gave the United States Strategic Air Command the right to use the Dhahran air base for another five years. Moreover King Saud patched up his traditional feud with the Hashimi monarchs of Iraq and Jordan, and all four Arab governments publicly protested against Egypt's meddling in their internal affairs. Even the weak sister states of Libya and Sudan were emboldened to follow their lead.

Egypt and Syria, meanwhile, with Yemen tagging behind, were moving into positions of growing dependence on the U.S.S.R. for military, economic, and technical assistance as well as commerce. But while Syria seemed to be succumbing in the second half of 1957 to Russian control, Egypt appeared determined to keep the Communists at arms' length. At the same time, the elaborate propaganda machinery of the Egyptian military regime worked round

the clock to keep alive the image of Nasser as "Mr. Arab Unity." His big chance came in February, 1958, when those Syrian nationalists suspicious of Russia's motives engineered to place their country under the wing of Egypt in a fused United Arab Republic. This peaceful act of union between the two Arab lands electrified Arab nationalists who hoped to see the political union of the entire Arab world in their lifetime. When patriarchal Yemen immediately entered into loose affiliation with the U.A.R. under the general title of "the United Arab States," the way was opened for any Arab land of whatever political stripe or structure to follow suit.

Arab Federation Fails

The two Hashimi monarchs, Faisal and Hussein, sought as a countermove to merge their kingdoms into what was first called the Arab Federation, and later the Arab Union, of Iraq and Jordan. But in the prevailing nationalist atmosphere of Arab solidarity, highly charged with slogans calling for social reform, economic progress, the stamping out of privilege at home, and "positive neutralism" abroad, the pro-Western royalists of the Union had little hope of competing with the military "republicans" of Egypt and Syria. In a word, the U.A.R. stood for revolution, the pro-Western Arab governments for the *status quo*. The one had seized the offensive; the other responded defensively. Unfortunately for the West, Arab society was growing more unstable with each passing day, so that any policy aimed at preserving the existing order became the most costly and the least likely to succeed.

The overthrow in mid-July of the regime in Baghdad, which came as a shock to the Western world, especially to the United States, underscored how thoroughly the slogans identified with the U.A.R. had captured the popular imagination in every nook and cranny of the Arab East. This was so even in a country like Iraq, where the local conditions—a benevolent monarchy, assured oil revenues, and a high development potential—were most auspicious for a program of gradual change and peaceful modernization. Furthermore, the swift and solid success of the Iraqi *coup d'état*, which within a fortnight won the recognition of even Great Britain and the United States, struck fear in the hearts of all devotees of the *status quo* and made it highly doubtful that any of the remaining Arab kings would be able to keep their heads, not to mention their crowns, for any reasonable period into the future. Threatened, too, was the uneasy balance between Christians and Moslems in tiny Lebanon. The intercommunity

strife which erupted in mid-May, 1958, was exploited by the United Arab Republic to buoy up the Moslem rebels with propaganda and material support.

The Arab-Israel Dispute

At the time the Middle East crisis of July, 1958, erupted, Israel permitted American and British planes the right of passage through its airspace to Jordan. Although this signified the common opposition of the two Middle East governments to the U.A.R., rapprochement between Israel and Jordan was clearly as distant as ever. For no Arab state would dare even privately to flirt with Israel, given the prevailing Arab nationalist temper. After the noise of the 1956 Sinai-Suez explosion died away, the Arab-Israel dispute became relatively dormant. While the United Nations Emergency Force patrolled the Israel-Egyptian frontier and the Sinai coast of the Gulf of Aqaba, and the Arab states were engrossed in their own internecine quarrels, Israel was consolidating its position at Elath and using the opportunity of the newly opened gulf to bypass the Suez Canal and thereby weaken the Arab economic blockade.

But it required little imagination to foresee that the dispute might explode at any time with even greater ferocity than in the past, since none of the major issues inherited from the Palestine war of a decade earlier was yet formally resolved. The number of displaced Palestine Arabs because of internal growth was pushing toward a million. From its birth in 1948, Israel carried on without permanent boundaries. Originally created under United Nations auspices as a provisional expedient to terminate the hostilities, the Arab-Israel armistice system failed to revive from the near moribund state to which it sank in 1956. The city of Jerusalem, which many hoped might be placed under an international regime, remained more divided than ever. Having proved incapable of defeating Israel on the field of battle, the Arab League states sought to strangle their hated neighbor through economic blockade.

U. S. Sympathy for Israel

Sympathy toward Israel ran deep in the United States. The feeling of friendship was compounded of humanitarianism in support of the European Jews uprooted by the Nazis in World War II, of respect for the nascent state's military stamina against overwhelming numerical odds, of the Israelis' ingenuity in organizing available technical skills for the rational exploitation of their country's niggardly na-

tural resources, and of the pro-Western orientation of both the Israel government and a massive majority of the Israel public.

At the same time, the United States gave its blessings to national self-determination throughout the Arab East and was generous in its offer of economic and technical assistance to the newly sovereign Arab states, encouraging them to launch comprehensive development programs. Pro-Arab sentiment was widespread in the United States among missionaries whose churches had served Arab lands for well over a century, among those who had invested in the oil industry and other business ventures in the Arab East, and among an expanding number who were disturbed by the stubborn phenomenon of an Arab refugee population.

The United States practice of distributing favors alternately to the two antagonists elicited little approval from either party. Most Arab nationalists were persuaded that the United States was incurably pro-Israel, a conviction that could not be shaken short of full endorsement of their hopes of eliminating the new state altogether. In their eyes, Israel was America's spoiled child and was kept alive artificially through America's mistaken generosity. The Israelis for their part tended to accuse the United States of over-indulging Arab nationalist extremism and of thereby delaying a formal peace settlement.

The reasons for United States pussy-footing were simple enough. The possession of strategic real estate and of oil gave the Arabs diplomatic advantages in a period of world tension. Washington, therefore, was prone to show greater patience with the Arabs and to attempt placing Israel in cold storage. Yet the United States was far from ready to abandon Israel. Rather, it was argued that the avowed American policy of "friendly impartiality" was designed ultimately to lead the disputants to an accommodated settlement.

Arab States Armed

The American and Soviet tactics after 1955 of competing to arm the Arab states, while withholding modern weapons from Israel, symptomized the renewal and intensification of the cold war in the Middle East. It had already contributed to the fighting in Sinai in the fall of 1956. Israel's fears were assuaged by its defeat of the Egyptians in Sinai and later by the continuing purchase from France of military weapons of recent design. But with "U.A.R.-ism" on the rampage in the summer of 1958 and the consequent intensification of Soviet-American rivalry in the Middle East, Israel could be expected to become

increasingly vigilant for its own security. Since its north and south are joined by a narrow corridor—no wider than ten to twelve miles—abutting the Jordan frontier, little wonder that Israel watched that frontier with growing anxiety when Jordan's lease of life seemed about to run out.

The Baghdad Pact

No less troubled by the Iraqi *coup d'état* were Turkey and Iran who together with Pakistan and Britain were founding members of the Western-inspired multilateral alliance in the Middle East, commonly known as the Baghdad Pact. The new government of Iraq, while not denouncing the pact, did not participate in the meetings of its Middle East members in Turkey on the very day of the overthrow of regime nor in England two weeks later. Moreover, Iraq's military leaders, dedicated to Arab unity nationalism, could be expected to adopt the U.A.R.'s policy of "positive neutralism," if not in its pristine purity, in an easily detectable variant. The loss of Iraq would eliminate the one Arab member from the Baghdad Pact.

The British surrender in October, 1954, of the base in the Suez Canal zone marked the culmination of a process of British military contraction in the Middle East that had begun with the evacuation in 1946 of wartime garrisons in Syria and Lebanon, the withdrawal in 1947 from Cairo and Alexandria, and the abandonment to chaos in 1948 of the Palestine mandate. The piecemeal dismantling of the British military system conformed to postwar realities. Imperialism had become outmoded in the West, and the depleted British exchequer could no longer afford far-flung bases in the face of rising costs.

But the headlong decline of British power deprived the West of a means—tested and proved in World War II—of safeguarding its regional interests and of integrating the Middle East into its global military arrangements. Efforts were therefore made in 1951-52 to establish a comprehensive collective security system for the Middle East with the local states and the Western powers participating on an equal basis. But these efforts did not materialize because the Arab states in particular shared neither the West's fear of Soviet aggression nor the desire to contain it. The Arab governments instead tended to view Britain and France as the aggressors because of their continued controls in scattered parts of the Arab world.

Secretary of State John Foster Dulles then sought in 1953 to apply the collective security principle to the Middle East on

a-segmental basis, on the theory that "a sense of common destiny and common danger" already pervaded "the northern tier of nations" along the Soviet frontier. With American encouragement and assistance, Turkey, Iraq, Iran, and Pakistan joined Britain in 1955 to form the Baghdad Pact. But the very creation of the organization, designed to circumvent the resistance of the remaining Middle East states and their immediate neighbors to collaboration with the West, merely made most of those states—notably India, Afghanistan, Syria, and Egypt—predisposed to accept favors from the U.S.S.R. and sharpened the tensions in the Arab-Israel area. Egypt, which became the savage foe of the regional collective security system, tirelessly cultivated the theme that Iraq's membership represented disloyalty to the Arab unity cause. It thus became an avowed purpose of Egyptian foreign policy, with the Kremlin's hearty endorsement, to destroy the system and to sever Iraq's ties to its pro-Western non-Arab Moslem neighbors hardly less than to the West itself.

Iraq's defection in July, 1958, threw the remaining Moslem members of the Pact into a state of consternation. Mere affiliation with the West excited lively opposition in Pakistan and Iran, where many felt that a policy of neutrality in the cold war might bring larger benefits than alliance. This feeling seemed likely to grow firmer, as the United States and Britain proved incapable of holding the line in the Middle East. In Iran, moreover, republicanism attracted many supporters, who in 1953 had come close to deposing Mohammed Reza Shah Pahlavi. While the young shah's popularity was more than restored in the intervening years, the easy triumph of republicanism in Iraq could hardly fail to revive the anti-royalist cause in next-door Iran.

Effects of Iraqi Crisis

Even in Turkey, where since 1945 government and public alike were united in approving all measures designed to hold in check the Russian behemoth posing a constant threat from the north and where the value of alliance with the United States and the West was almost universally appreciated, the Iraqi crisis brought to the surface differences of attitude toward external affairs. Opposition politicians openly found fault with the Baghdad Pact and the government's hasty approval of American and British military action in Lebanon and Jordan. The Turkish government, however, rather than scrap the pact, seemed determined to put teeth into it by committing its own troops, if need be. Thus in October, 1957, the Turks had rein-

forced their military units along the Syrian border as a demonstration against Syria's consorting with the U.S.S.R. Again in mid-July, 1958, the Turkish government advocated the adoption by itself and its allies of a firm policy, although it soon reversed itself along with the other Baghdad Pact powers and the United States to recognize the republican regime of Iraq.

The United States never joined the Baghdad Pact, whose formation it did so much to sire, but merely agreed to sit on its economic and counter-subversion committees and, after the 1956 Suez crisis, on its military committee as well. This straddling of the issue deprived the organization of military effectiveness and exposed the United States to criticism as much from the adherents of the pact as from its enemies. After the 1958 Iraqi crisis, the United States, while continuing to avoid full membership, nevertheless went a step further and accepted full obligations under Article 1 of the Pact, which, in effect, made the United States a guarantor of the defense and security of the Middle East member states. In addition, the United States granted Turkey \$234 million of aid and was instrumental in Turkey's obtaining a further \$100 million from the Organization for European Economic Cooperation and \$25 million from the International Monetary Fund. This aid was intended to help our Middle East ally to cope with the baffling economic and fiscal dislocations attending its rapid development program.

Soviet Intervention

The Baghdad Pact provided the Russians with a long-sought opportunity for meddling in the affairs of the Middle East. If we are to understand Russia's actions in the Middle East, we must keep in mind the Kremlin's obsessive anxiety over "capitalist encirclement." The apprehension over the Middle East frontier, where no submissive zone separates the U.S.S.R. from the outside world, is perhaps greater today than anywhere else along the Soviet periphery. The Middle East adjoins vulnerable districts of the U.S.S.R., where essential industries and raw materials are concentrated.

Immediately after World War II, the Kremlin tried, as in Eastern Europe, to dismember Iran and convert Turkey into a satellite. Stopped by the determined Western stand, within the United Nations and beyond, the Russians lost initiative in the Middle East for nearly a decade. Nevertheless, Moscow supported every move that relieved Britain and France of their bases, influence, and interests in the region and that prevented the United States from becoming involved in the Middle East.

Because of the absence of Soviet political treaties, formal military commitments, and direct commercial investments, the Russians could afford to be totally unrepresed in their dealings with Middle East countries and reversed their policies at will. This was amply demonstrated in the Arab-Israel zone. The U.S.S.R. championed the cause of Israel in 1947-49 politically by undeviating support at the United Nations and materially by permitting the sale of Czech arms to the fledgling state. Since 1953, the Russians have endorsed the Arab position at the United Nations without qualification as part of a deliberate bid for Arab nationalist favor.

The Russians finally scored a diplomatic breakthrough to the strategic nerve center of the Middle East, at the time of Nasser's deal in 1955 for Soviet orbit arms. The Soviets for the first time were in the comfortable position of being able to direct anti-Western operations in the Middle East by remote control, without any prior communication or conquest. The United Arab Republics, under Nasser's leadership, by spreading the gospel of "positive neutralism" and by vowing to overturn the status quo in the Arab East and to sweep out every last crumb of Western interests, were carrying out the very purposes that the Kremlin sought to foster. The succumbing of Iraq to Arab unity republicanism, with its implications for the remaining Arab monarchies and for republican Lebanon, brought the U.S.S.R. that much closer to its goal.

It was ironical that the U.S.S.R., which alone among the Great Powers engaged in imperialist expansion since 1945 and, unlike Britain and France, surrendered no territories wrested from Middle East peoples in an earlier period, should be able to sell itself in the region as the supreme advocate of anti-imperialism. This was especially true in the Arab sector, for the nearly 20% of Soviet territory that once formed part of the Middle East had been wrested, not from the Arabs, but from the Turks and Iranians. Yet the United States, with no territorial ambitions—past or present—in the Middle East, seemed hardly able to take any counter-action without inviting accusations of imperialist interference.

United States Difficulties

Prior to the Suez crisis of 1956, the United States tried with diminishing success to coordinate its Middle East policies with those of Britain and France and tended, in general, to rely on the military power of the United Kingdom in the region. Though accepting more and more financial commitments, the United States nevertheless continued loath to undertake

military responsibilities. But the determined stand taken by Washington, within the United Nations and outside it, against the British and French military action in Egypt over Suez so thoroughly weakened the principle of coordination among the Western powers and the prestige of the United Kingdom in the Middle East, that the United States had to move into the breach, if any Western interests were to be salvaged.

The first step in this direction was the doctrine promulgated by President Eisenhower on Jan. 5, 1957, and approved by the Congress two months later. It was designed to warn Russia and the states of the Middle East that the United States would prevent, by the use of American troops if need be, any segment of the region from falling behind the Iron Curtain. Moreover, to avoid the stigma of imperialism that the nationalists were bound to attach to any unilateral declaration by the United States, the doctrine made it clear that American action would be taken only by appeal from a Middle East state and that American policy would be developed in partnership with the countries of the region.

But the fact remained that the immediate menace to the Western position in the Middle East did not come directly from "international communism" or Soviet aggression. Instead, it came from Arab unity nationalism under the leadership of the United Arab Republic, aided and abetted by the Soviet Union. For dealing with this kind of threat the Eisenhower Doctrine furnished no adequate techniques. It could not prevent the Iraqi revolution which was, in effect, anti-Western in its motivation and which found firm support in the U.A.R. and, once it had taken place, in the Soviet Union as well. Nor could the commitment of United States troops under the doctrine and by invitation of the government of Lebanon, as occurred in July, 1958, assure us of preserving the close friendship of the one government that had unconditionally approved the policy. For the moment United States troops were withdrawn from Lebanon and British troops from Jordan, the days of the pro-Western regimes of both countries were in jeopardy. Moreover, France's failure in 1958 to join the United States and Britain in common action, just as the American failure in 1956 to join Britain and France, gave the Soviets a new lever with which to pry apart the Western alliance.

Thus it appeared in mid-1958 that the American government had still not come to grips with the basic issues of the Middle East, even though it viewed the deteriorating situation as sufficiently grave

to call for the dispatch of American forces to the scene. We seem to have been maneuvered, partly through our own errors of judgment, into a position of safeguarding the status quo in a highly revolutionary situation, and we were still continuing to espouse the strategy of keeping the U.S.S.R. out of the Middle East, long after the Russians had found the means for meddling there by local invitation. In this context our NATO allies' reliance on

Middle East oil—with our apparent endorsement—has hastened the day when we shall have to find natural or synthetic substitutes or accept Middle East oil on Arab nations' terms. As the year 1951 wore on, the prospect loomed larger than the region with its invaluable oil deposits, military bases and intercontinental communications presents an extremely dangerous threat to the West.

Oil Data for Major Operations in Middle East

Country	Proved reserves, Jan. 1953 (billions of bbls.)	Participating companies	Company nationality

SOUTHERN ASIA, 1958

By

FRANK N. TRAGER

Professor of International Relations, New York University

and

WILLIAM HENDERSON

Assistant Executive Director, Council on Foreign Relations, Inc.

MOST OF Southern Asia is just emerging from the chrysalis of Western domination. Among the countries of the area, Afghanistan and Thailand alone managed to preserve their independence throughout the colonial period. The others have won freedom only during the past twelve years.

But independence has not brought tranquillity to Southern Asia. This vast arc of backward nations in revolution still faces the gigantic tasks of creating modern, effective political institutions; of developing and diversifying their primitive economies; and of achieving a new social synthesis. At the same time the peoples of the area have begun to cast off their ancient lethargy. They are awakening to the possibility of change. Progress—in the sense of more schools, more hospitals, greater productivity, higher levels of income, industrialization—has become a transcendent ambition. There is a restlessness in Southern Asia, spreading out from leadership groups in the principal cities to the masses on the countryside, which imparts an urgency to politics. The alternative to meaningful progress must eventually be descent into violence and totalitarianism.

Such conditions afford almost limitless opportunities for Communist exploitation. Since the end of World War II, local Communist movements, responsive to the directives of Moscow and Peking, have been ceaselessly active throughout most of Southern Asia, and Communist-led rebellions have occurred in several countries. Meanwhile the brooding colossi of Communist China and Soviet Russia hover over the whole area. To be sure, the likelihood of overt Communist aggression in the foreseeable future is not very great. A frontal assault on Southern Asia would seem foolhardy at present in view of the alternatives open to Communist strategy. Nevertheless the danger of open attack cannot be entirely discounted.

Political instability has been a constant problem. The activities of local Commu-

nist movements, already mentioned, and the vague threat of external aggression in part account for this phenomenon. But communism is not the only catalyst of instability. Ethnic antagonisms have been another and potent source of trouble. Perhaps more important, political factionalism has been rife since independence, and there exists in the area a predisposition to employ force for the settlement of partisan differences. Mere banditry has also become a serious problem in many places.

Experiments in Democracy

There has been considerable experimentation with democracy in Southeast Asia, and on the whole significant progress has been made. Today almost every country in the region publicly confesses the democratic faith. Most of them have conducted national elections, and their governments are ostensibly based on the will of the people as expressed at the polls. It will be a long time, however, before democracy in Southern Asia corresponds to familiar Western standards. The whole history of the area, with its emphasis on authoritarian rule and the supreme importance of the collectivity (family, village, nation) as against the individual, is antithetic to the growth of modern democratic institutions. Mass illiteracy and ignorance of substantive issues also limit intelligent popular participation in national political life. A vast gulf separates the sophisticated urban leadership classes and the bulk of the rural population. Many of the new governments are semi-authoritarian in character, and civil liberties are restricted in various degrees.

All the countries of Southern Asia are underdeveloped in the sense of being primary producers in which per capita output is very low. And in all of them the revolution of rising expectations is rapidly gathering force. It would be difficult to exaggerate the magic of the term "eco-

conomic development" in Southern Asia. It connotes hope for a better life, equality with the West, progress. The nations of the area look for the end of subsistence existence, to diversification of their monoculture economies, and to at least a moderate degree of industrialization. In large measure the fate of the new governments of Southern Asia hinges on the extent to which they can bring about meaningful economic development within their respective territories.

Yet when it comes to performance, the record since independence has been decidedly mixed. India, now launched on its Second Five-Year Plan, has made noteworthy progress and the outlook is for continued advance despite growing difficulties. But elsewhere the picture is much less encouraging, although there has been some measureable growth in Burma, the Philippines, and a few other countries. For the area as a whole it is doubtful whether development has done more than keep pace with the phenomenal expansion in population. Nor are the prospects much brighter in the years immediately ahead. The reasons are not difficult to find: too little capital, inadequate technical and managerial skills, and economic and social institutions incompatible with the requirements of a dynamic, expanding economy. Widespread unrest and insecurity have also been inhibiting factors, as well as a natural reluctance to make essential sacrifices.

Rise of Neutralism

Neutralism has won many adherents in Southern Asia. Only recently liberated from colonial rule, the peoples of the area tend to react emotionally to the global power struggle in which their former masters, the leading Western nations, are involved. Many Southern Asians are at least as fearful of a recrudescence of Western imperialism as they are of its Communist form. Even where political leaders have some understanding of the Communist danger, they would usually argue that subversion is a greater menace than aggression, and that it can be dealt with only by long range programs of political, economic and social reform, not by military alliances.

Southern Asians are apt to say that neutralism contributes positively to the amelioration of cold war tensions. Newcomers to the world stage, they have had little practical experience in the vicissitudes of interstate relations and often betray a lack of understanding of the role of force in foreign affairs. They overvalue the power of words and a strong moral position. They desperately want peace. Overshadowed by Soviet Russia and Com-

munist China, and lacking the assurance of outside protection, they are inevitably tempted to come to terms in the hope that a friendly, neutral posture may safeguard their territorial integrity and political autonomy against infringement by their great northern neighbors.

The persistent strength of local Communist movements should also be remarked on. At bottom the continuing appeal of communism in Southern Asia is to be explained by conditions of political instability, economic depression and social unrest prevalent throughout much of the area, and the feelings of inadequacy and frustration to which they give rise. The Communists strive to associate themselves with deeply felt local aspirations for progress and a better life. They claim to have discovered the secret (with Russia and mainland China as visible proofs) whereby backward and underdeveloped nations may lift themselves by their own bootstraps. Communism is a satisfactory doctrine emotionally because it is fundamentally anti-Western. It projects a facile and persuasive theory of imperialism which places the entire blame for Southern Asia's troubles squarely on the former colonial rulers. Finally, in an area where the organization of political parties is for the most part still at primitive levels, the well-financed, rigidly disciplined and skillfully led local Communist Parties give their cause important advantages over competing doctrines and movements in the struggle for power.

Meanwhile, Communist strategy in Southern Asia as elsewhere in the world has become much more subtle and flexible in recent years. Moderation has replaced intransigence and rebellion as the keynote of Communist policy. The Communists appeal for cooperation with non-Communist groups in the attainment of common goals. They strive to associate themselves with Southern Asia's passionate yearning for peace. Neutralism is encouraged. The West, especially the United States, is blamed for prolonging the cold war, while the Communists offer friendship and aid with no strings attached. In many countries of the area this strategy has enabled the Communists to recover the strength lost in abortive and unpopular insurrections, and to lay the bases for more widespread support than they have ever before enjoyed.

We have started this section with India since she is the largest nation and the leading power of the Southern Asia group. All other nations of this area follow here alphabetically.

India

The Union of India is the second most populous nation on earth (approximately 400 million). From the achievement of independence on Aug. 15, 1947, until Jan. 26, 1950, India was a dominion within the British Commonwealth of Nations, but thereafter became a "sovereign democratic republic" while retaining membership in the Commonwealth.

The Prime Minister is Jawaharlal Nehru, who assumed office Aug. 15, 1947, and has held it continuously ever since. The Congress Party has dominated national politics since independence. In the elections of March, 1957, the Congress won 365 out of 488 contested seats for the House of the People; Communists, twenty-nine; Praja (Democratic) Socialists, nineteen; with the remaining distributed among minor parties and independents.

India is made up of fourteen states and six federal territories. The states represent largely linguistic divisions and reflect the immense diversity of the subcontinent. There are at least fifteen principal languages in the country, and hundreds of separate dialects. Hindi, the mother tongue of a third of the population, may one day emerge as the national language. But at present, English is used among the educated. On the other hand, India possesses substantial religious unity with about 85% of the population being Hindus.

The Indians have a powerful tradition of academic learning acquired during British hegemony. Cambridge, Oxford, and London Universities graduated thousands of Indians, and in addition India itself built a number of first-rate academic institutions. There were eighteen universities and 532 colleges at independence. Thus, at the top levels India had a respectable supply of trained people. If there were too many lawyers or college degree "clerks," there were also those who could, to paraphrase a comment of Nehru's, talk, think about, and take part in the atomic age "while living in the cow-dung era."

Two men have dominated the recent history of India. Mohandas K. Gandhi, the Mahatma (see p. 714), who was assassinated on Jan. 30, 1948, by a Hindu fanatic, was educated in England and practiced law in the highly charged, discriminatory atmosphere of South Africa. During this period he learned from Thoreau the virtues of peaceful "civil disobedience" and forged it into a political weapon called *Satyagraha*, or truth-force, non-violent action. With this weapon

Gandhi in time won the love and admiration and following among his countrymen that eventually made the British quit India.

The other is Nehru. A Brahmin by birth, he spent much time in British jails for nationalist activity. While in prison during World War II, he wrote one of his most important books, *The Discovery of India*. In it, Nehru asked whether India had some "well of strength" on which to draw in its future development, or whether his country was like "an aged person" merely playing "the part of a youth." He found true vitality chiefly among the "Americans, the Russians, and the Chinese;" and of these three he was more "astonished" by the vigor of the Chinese.

These two men, Gandhi and Nehru, symbolize India today. The idea of moral force was at the heart of Gandhi's teaching and no Indian in contemporary public life, including Nehru, can remove himself very far from the symbol of Gandhi. Even the Indian Communists have tried to wrap themselves in some way in the Gandhi mantle.

But Gandhi passed from the scene virtually on the day after independence. It is, rather, Nehru's resolve to make India "count for a great deal or not count at all" that, even more than the Mahatma and his teachings, has been the mainspring of Indian action since independence. That is why Nehru himself is not only Prime Minister, but also Minister for External Affairs, personally in charge of the Department of Atomic Energy and virtually his own minister for national planning as well. No middle position for India or for him; it does not attract him. Nehru's conception of India has steadily demanded, and in increasing measure received, the attention of a fascinated world. He has determined that India will play a major role not only in Asia, but also in the counsels of the nations everywhere, including the United Nations. His foreign policies are less the expression of some supposed wellspring of Indian spirituality or idealism than the reflection of his determination to make India a great power recognized and accepted as such, a power determined to preserve its own security in its own way.

Foe of Imperialism

India can be found invariably ranged against what it considers to be imperial-

ism, especially of the Western variety, as in its outrage over the Anglo-French attack on Suez in 1956. Only belatedly, and in part forced by domestic public opinion as much as by loss of face in the non-Soviet world, did official India also speak out against the brutal Soviet suppression of the Hungarian revolt in the same year.

India yielded to Communist China's sphere of influence in Tibet but hastened to protect its own in Nepal, over whose foreign relations it exerts considerable control. New Delhi helped to convene a British Commonwealth Conference in February, 1949, to support Burma's sorely tried government then under severe attack by communist and other rebels; a primarily Asian conference later the same year to support Indonesia's claims against the Dutch; and joined with the other Colombo Powers (Burma, Ceylon, Indonesia, and Pakistan) to sponsor the April, 1955, Bandung Conference, after having agreed in June, 1954, with Communist China on the "five principles of peaceful coexistence."

While India actively participates in the Afro-Asian bloc, it is in principle opposed to all pacts and bloc arrangements. Its sharpest barbs are reserved for the Southeast Asia Treaty Organization (SEATO) and the Baghdad Pact, in part because these are viewed as bringing the cold war closer to Asia, but above all because they are considered to endanger the security of India itself since Pakistan is a member of both of them. The real issue here, of course, is Kashmir. In Indian eyes, Pakistan is the aggressor in Kashmir; the U. N.-arranged cease-fire stopped a shooting war in what India regards as an Indian state. SEATO and the Baghdad Pact not only put Pakistan in a position to attack India—so the Indians believe—but also force India to spend abnormally on its own defense establishment, and thus divert funds which are desperately needed for economic development purposes at home.

It is in this context of dynamic self-assertiveness and as an Asian geopolitical center that India pursues its foreign policy. Bitter personal experience with the savagery of race prejudice underlines the demands of India's leaders for equality everywhere in the world, and reinforces their innate suspicion of the West. India's long struggle against the British strengthens the cry against imperialism and colonialism. Indian conceptions of mediation and compromise help to explain New Delhi's role in Korea, Indo-China, and the U. N., and as a third force or bridge between the power blocs.

Since Stalin's death, Nehru has hoped for the possibility of a thaw in the cold war. His comment on the execution of

Nagy ("most distressing"), and his tart remark at the May, 1958, meeting of the All-India Congress Committee about "the hundred flowers" of Mao becoming "weeds to be pulled out," may be the heralds of disillusionment with Khrushchev's leadership. Correlatively, despite vocal Indian disapproval of such U. S. policies as SEATO, nuclear weapons testing, the Baghdad Pact, etc., relations between the two countries have perceptibly improved since Nehru's visit with President Eisenhower in December, 1956.

Nehru is now 68; he has already made India count a "great deal" on the world stage.

Challenge of 20th Century

Although many Indians, especially those in contact with non-Asians, voice pride and satisfaction at the diplomatic position achieved by India in the past decade, this is not the major concern of most Indians at home. There the dominant issue is the success or failure of the truly staggering effort being made to propel India economically into the twentieth century. This is the major challenge and the true test of India's vitality. Unless success here crowns its efforts, India in the final analysis will not count at all.

It is difficult even to grasp the magnitude of India's economic task. The most overwhelming problem, India's Planning Commission frankly admits, is "mass poverty." At the time of independence, perhaps 5% of the population had a living standard which, even by India's humble criteria, could be regarded as satisfactory. A monthly income of \$60 was the privilege of a few. School teachers earned \$20 to \$30 per month, a young engineer \$80 to \$100. For the 95% of the population below this level there was "the vast sea of poverty. . . . Even among Asian nations, the poorest in the world, India stood nearly at the bottom in any comparative scale of prosperity." About 75% of the labor force was in agriculture, 10% in mining, manufacturing and hand trades, 9% in government and other services, and 7% in commerce and transport. Poverty reinforced inefficiency. For example, in India a farmer produced about 1200 pounds of rice an acre, in China twice that, and in Japan better than 3½ times as much.

In March, 1950, Nehru's government established a Planning Commission "to promote a rapid rise in the standard of living of the people by efficient exploitation of the resources of the country, increasing production, and offering opportunities to all for employment in the service of the community." One year later the Commission presented its First Five-Year

Plan (see Table 1). It called for new public investment of \$4.3 billion, which, allowing for substantial increases in private investment and also for anticipated population growth, would raise national income by 11% (a modest 2% improvement per year). Although like all other underdeveloped countries India was fascinated by steel mills and power plants as symbols of industrial development, nonetheless it resolutely turned to agriculture, irrigation, land reclamation, and community development as the core of the program.

The Plan went into operation as of April 1, 1951, and was completed March 31, 1956.

Fortunately the weather was favorable for agriculture, food production increased by 11% and agriculture as a whole by 19%. Other indices also rose. For example, more children went to school. At the beginning of the First Five-Year Plan, 42% of children between 6 and 11 were in school. This figure rose to 51% at the end of the Plan. Only 14% of children from 11 to 14 were in school in 1950-51. This figure was 19% in 1955-56. Although investment in industrial production rose steadily (38% over 1951), factory employment lagged and for a time India faced a considerable unemployment problem. But the Plan was a psychological and in many major and minor ways a material success.

The First Five-Year Plan could not have succeeded without external assistance. This aid came primarily from the West. Not until February, 1955, did the U.S.S.R. enter the picture, but then its offer to build and equip a steel plant at Bhilai on terms more favorable than those hitherto secured from the West was widely hailed in India. Western resources made available to India amounted to approximately \$625 million during the Plan period. Of this sum U. S. assistance, excluding private investments, reached about \$500 million. The U. N. Technical Assistance Program contributed \$5.6 million.

Another debate followed the formulation of the Second Five-Year Plan. By this time many eyes in and out of India were focussed on the decisions being made. Economists differed as to the quantities and allocation of investment, on the capabilities of India to sustain growth with democracy. Comparisons were consciously made between India's progress and the reputed progress of Communist China. India decided to move ahead, but not at the price of communism; her Second Five-Year Plan continues in a democratic framework. It envisages investment in the public sector more than twice as great as during the earlier Plan, to be allocated as per Table 4.

In this plan allocations to all parts of

the economy have been vastly increased and the emphasis upon direct industrialization sharply stepped up. India expected to finance the program mainly from internal resources, but would still require \$1,680 million in external assistance. Toward this gap, New Delhi had a Russian loan of \$126 million, a \$70 million credit from Great Britain plus about \$420 million available in sterling reserves, and a favorable balance of payments in 1956 amounting to almost \$200 million. The rest, \$800-900 million, would have to come from the United States and other Western sources, including the International Bank. In August, 1956, the United States and India concluded an agreement for the "sale" of surplus commodities for local currency amounting to \$360 million. A substantial portion of this will be loaned back to India. In addition the United States continued in fiscal years 1957 and 1958 its aid grants amounting for the two years to approximately \$150 million, and extended an Export-Import Bank loan of \$150 million. The International Bank has also helped.

In August, 1958, five nations (the United States, Britain, West Germany, Japan, Canada) agreed on a multi-million dollar aid program to keep India's development plan going over the next several months, and also expressed their intention of trying to meet India's external capital needs, insofar as they were able, for the balance of the Second Plan, ending in March, 1961.

Thus India seems well on the way to filling the capital gap for the Second Five-Year Plan. Ultimate success would appear to depend not so much upon the availability of external financing, as upon the Indian response to the challenge of the enormous task ahead. If the goals of the Plan are substantially realized, the results will be as per Table 5.

India may not achieve all this. But with peace a substantial portion of it will be accomplished and India will thereby have demonstrated the effectiveness of democracy even in an unfavorable Asian setting.

Table 1
Allocations of Resources under
First Five-Year Plan

	Millions of dollars	Per cent
Agriculture (including community develop- ment, irrigation and power)	1,570	38.5
Power	267	6.1
Transport and com- munications	1,044	24.0
Industry and mining	363	8.4
Social services and re- habilitation	892	20.5

Total	\$10,080	100.0

Table 5

India's Second Five-Year Plan
Targets for India's Growth, 1956-1961

Advance of Agriculture and Rural People

All of rural India—325 million villagers—covered by the rural development program.

A 28% rise in agricultural production, with a 25% increase in foodgrains production alone.

21 million more acres put under irrigation.

Every cultivated acre supplied with fertilizers and improved seed.

Continued progress on land reform, and more opportunities for landless labourers.

Rapid Development of Industry, Power, Transport

A 64% increase in (net) industrial production.

Intensive development of basic industries with a 150% increase in capital goods production alone.

Three new steel plants, with over 230% increase in steel production, including doubled private steel production.

Intensive development of village and small scale industries, to increase their production by 30%.

A 100% increase in electric power production; and 58% increase in coal production.

Modernization and improvement of railways to carry at least 35% more freight and 15% more passenger traffic.

Expansion of transport, with 19,000 more miles of surfaced roads, and enlarged ports, harbors and shipping.

Fuller Employment

10 million more jobs and employment opportunities.

An intensified manpower program to prepare and secure trained personnel for development.

Special programs for training and absorbing the educated unemployed.

Table 5—Continued

Higher Living Standards

An 18% rise in income per person, or a rise from \$56 a year (1956) to \$66 (1961).

A 21% increase in consumer goods, to include:

A 16% increase in cloth available per person, or a rise from 16 yds. a year to 18½ yds.

An adequate and more balanced diet, including not only cereals, but more milk, eggs, vegetables and fruits.

Primary school for nearly 8 million (23%) more children.

Nearly 2 million (25%) more homes.

12,500 (11%) more doctors, and 3,000 more rural health clinics.

Afghanistan

Afghanistan is a constitutional monarchy ruled by the Mohammed Zahir Shah, who ascended the throne Nov. 8, 1933. Prime Minister Sardar Mohammed Da'ud, a close relative of the king, visited the United States in June, 1958. Three facts dominate the life of this pastoral, underdeveloped Moslem country and have profoundly affected its domestic and foreign policies: (1) It was long an object of Anglo-Russian imperialist rivalry; British power in the nineteenth century succeeded in maintaining indirect control until after World War I, when full independence was restored to the Afghans. (2) It has 1,250 miles of unprotected border with the U.S.S.R. (3) It is a landlocked mountainous state dependent upon the not always existing good will of its Soviet, Iranian, and Pakistani neighbors for vital import and export communications.

Like most other Asian states, Afghanistan has embarked upon an ambitious program of economic development. In 1956, parliament adopted a Five-Year Plan to improve agriculture and to build some of the power, transport, irrigation, industrial, and social resources needed to upgrade its primitive economy. The plan called for a total investment of \$464 million, one-fourth of which was expected from foreign loans and grants.

More than 90% of the population is engaged in agriculture. In 1957, the per capita value of Afghanistan's gross national product was approximately \$50 a year (in the United States it was \$2,400). The chief products are karakul skins, wool, cotton, nuts and fruits, cereals, and sugar; the first four (and carpets) constitute between 85 and 90% of exports by value. The

More Income for National Development

Increased national production and income will make it possible to save larger amounts for investment in national development, at the same time that living standards rise.

At the end of the Second Plan, 11% of national income, as against about 7% at the end of the First Plan, is expected to be invested.

Cost of Plan

A total of \$9,600 million, or double the amount of the First Plan, is to be spent by the states and the central government to achieve these goals. In addition, another \$4,800 million is expected to be invested over the Second Plan by private enterprise in industry, agriculture and other development.

United States and India have been Afghanistan's chief markets, but more recently the Soviet Union and its satellites have climbed steadily as trading partners.

To a large extent the government, through its Central Bank founded in 1933, controls export earnings, and since 1953 has increasingly extended its participation and control over new industrial and related investments.

Russians to the North

In its efforts to raise living standards mainly by its own bootstraps, Afghanistan has had to face the problem of its great Russian neighbor to the north and attempt to overcome the handicap of transit trade across extremely difficult terrain. There are few roads or usable waterways. The exit route through Iran is least useful and most expensive; the route through the Soviet Union requires a political accommodation; the best route, through Pakistan, has been historically complicated by the irredentist conflict between the two countries over the border region of "Push-tunistan," the home of the Pathans. Twice, in 1950 for three months and in 1955 for five months, Pakistan blocked its neighbor's transit to the sea. Rioting along the border led to acute tension and the mutual recall of diplomatic representatives. In June, 1958, the two countries signed a Transit Agreement stimulated in part by the United States and by the United Nations Geneva Conference on the Law of the Sea in April, 1958. A U. S. loan to Pakistan will enable that country to complete railroad lines to the Afghan border, and the latter to connect with them and thus indirectly to the sea.

These circumstances, plus the need for

external aid and the historic desire to preserve its independence against Russian encroachment, have led Afghanistan to a policy of neutrality or neutralism in international affairs. Kabul signed a treaty of neutrality and non-aggression with the U.S.S.R. in 1931, and a far-reaching trade agreement after the imbroglio with Pakistan in 1950. Since then the Soviet Union has intensified its efforts at penetration by means of aid and trade policies and rigorous support for Afghanistan's neutralist position. A new agreement in December, 1955, following the visit of Khrushchev and Bulganin to Kabul, set the stage for a massive Soviet economic program. Estimates to June, 1958, indicate that Afghanistan has received the equivalent of \$161 million in loans and credits from the U.S.S.R., including \$25 million for military assistance, as against \$59 million of grants and loans received from the United States.

Burma

Burma achieved independence on Jan. 4, 1948, after a century and a quarter of British rule. Unlike India, Pakistan, and Ceylon, the Burmese elected to withdraw from the British Commonwealth, and set their international course as a sovereign republic.

Since then Burma has been continuously ruled by a government representing the Anti-Fascist People's Freedom League (AFPFL), a coalition originally organized as a wartime resistance movement. After the Japanese surrender, this youthful and rather curious coalition of Socialists, Moslems, Christians, and assorted patriots successfully engineered a strategy of peaceful revolution to bring about Burma's independence early in 1948.

Well before independence, the non-communist leadership of the AFPFL discovered that their communist allies were inexorably maneuvering for total power, with the result that the latter were expelled from the AFPFL in November, 1946. The Communists eventually launched an armed insurrection in March, 1948, and together with members of an important ethnic minority, the Karens, have been in open rebellion against the government for the past ten years.

The AFPFL government survived with difficulty in the earlier days of the revolt, but steadily gained strength after it won huge parliamentary majorities in two national elections, 1951 and 1956. At the Third Congress of the AFPFL in January, 1958, Prime Minister U Nu, speaking for a unanimous cabinet, defined the ideology of the AFPFL as democratic, socialist, neu-

tralist, and favorable to all religions, having special regard for the majority religion Buddhism. Marxism, which Nu defined simply as communism, was specifically rejected. By this time Burma, having surmounted the tragedy of rebellion, and also the incursion (1950-1954) of Chinese Nationalist troops who for a time seriously endangered peace between Burma and Communist China, and having demonstrated its ability to bring about meaningful economic progress, appeared at last to be safely on the way toward what the Burmese called *Pyidawtha* (the happy land), or the welfare state.

The ideological unity of the cabinet at the beginning of 1958 concealed deep fissures in personal and organizational relationships among AFPFL leaders, who had been almost continuously at the helm of the nationalist movement since their student days in the 1930's. At the end of April, 1958, this leadership and the party split, publicly and wide.

In September, 1958, the Burmese Army took power in a bloodless coup to prevent Communist elements from seizing control. The army vowed to preserve democracy.

What has perhaps been more significant about Burma during these early, difficult years of independence is the ability of the people to go about their workaday pursuits largely disregarding the conflict at the center. During ten years of rebellion, bridges and water mains have been blown up, trains derailed, and levies made by both the rebels and the government, but the sturdy peasant masses have continued without serious disruption the placid agrarian life that characterizes 85% of Burma's population.

Burma is the largest rice-exporting country in the world, capable in pre-war days of placing more than three million tons on the world market annually. World War II and the insurgency have cut down the volume to a postwar high of two million tons. Income from rice exports, which are controlled by the government, has been earmarked largely to finance Burma's Eight-Year Plan adopted in 1952. With the collapse of the Korean War boom, Burmese ambitions to attain slightly higher than pre-war levels of production and consumption per capita by 1960 had to be sharply curtailed. A more modest version of the Plan was adopted for the 1956-1960 period. By stepping up investment in agriculture and curtailing investment in industry and social services, Burma still hoped to attain creditable advances by 1960.

Shifts to Soviet Aid

From 1950 to 1953, Burma received some \$20 million in grand aid from the United

States. But in the latter year, because of disappointment with the United States over the removal of Chinese Nationalist troops from Burma, Rangoon terminated all grant aid agreements. In 1954 and 1955, mainly as a result of inability to sell their rice surpluses, the Burmese entered into a far-reaching and continuing series of barter arrangements with the Sino-Soviet bloc, which served to dispose of about 25% of annual rice stocks. On the whole, Burma has not been especially happy with these barter arrangements and has increasingly sought to sell rice for cash. Approximately \$42 million worth of Soviet aid, designed to build a technological institute, a modern hotel and a hospital, has also been accepted but will be paid for by the exchange of "gift" rice. In 1957 and again in 1958, new arrangements were made with the United States for loans and the purchase of surplus agricultural products, along with a \$20 million loan from the International Bank for Reconstruction and Development.

After the first two years of independence, during which Burma felt rather neglected by the West, its leaders developed a foreign policy of neutralism or "third-forceism" which they hoped would spare them involvement in the cold war. This did not prevent Burma from supporting the U. N. on the Korean issue and from voting against the Soviet bloc on the Hungarian issue. Basically, Burma is cautious with respect to, if not afraid of, its giant northern neighbor, Communist China, with whom it shares 1,200 miles of common border and to whom it will probably have to yield a portion of that border despite the fact that both nations have agreed to the so-called "five principles of peaceful co-existence."

Cambodia

Cambodia, descendant of the ancient Khmer empire whose magnificent monuments can still be seen amid the ruins of Angkor, was the only part of former French Indo-China not partitioned by the Geneva Agreements (July, 1954) terminating the nine-year Indo-China war. During the prolonged conflict between France and the communist-led Viet Minh, this small, backward Buddhist nation had remained for the most part outside the main theaters of military operations, and relatively free of communist subversive activity. In November, 1953, France made far-reaching concessions to Cambodian demands for freedom; and complete sovereignty was won by the Khmers soon after Geneva.

Political life in Cambodia has been dominated by the volatile, enigmatic person-

ality of ex-king Norodom Sihanouk. Born in 1922, Sihanouk ascended the throne in 1941 and played an outstanding part in the protracted negotiations that ultimately led to independence. In March, 1955, he suddenly abdicated the throne to undertake a more active role in domestic politics. He organized a new party, the Popular Socialist Community, which won 82% of the vote and all national assembly seats in the 1955 elections, and which has controlled the government ever since. (New elections in March, 1958, again gave the Popular Socialist Community a clean sweep of assembly seats.) Despite his unquestioned dominance, Sihanouk has consented to serve only intermittently as prime minister during this period; and political life has been characterized by marked cabinet instability.

Since Geneva, Cambodia has pursued a neutralist course in world politics, and Sihanouk has emerged as one of the most vocal champions of this international orientation. While heavily dependent upon aid from the United States (about \$40 million annually) and to a lesser extent France, Cambodia has also sought and received large scale help from the communist bloc, especially Red China. Relations with the United States deteriorated in 1956, primarily over allegations of American interference in Cambodia's internal affairs; but the pendulum swung sharply in the other direction during 1957 with the exposure of communist subversive activities financed and directed from abroad. As if to right the neutralist balance once more, Phnom Penh suddenly recognized Red China in August, 1958, and shortly thereafter Sihanouk departed on a much publicized visit to Peking. While steering a middle course between the world power blocs, Cambodia has had consistently bad relations with its two largest neighbors, Thailand and South Vietnam, and practically no significant contacts with Laos.

Although the bulk of American aid has gone to support Cambodia's armed forces, the United States has also contributed to long range economic development. The most spectacular project is a highway connecting the capital with Kompong Som, on the Gulf of Siam, where the French are building a deep-water port to free Cambodian commerce from dependence on the Mekong River. Implementation of Cambodia's overall development plans has proceeded slowly.

Ceylon

This small and beautiful tropical island, eighteen miles off the southern tip of India, is a self-governing dominion within the British Commonwealth of Nations.

Elizabeth II is acknowledged as "Queen of Ceylon," but the present government looks to eventual establishment of a republic while retaining membership in the Commonwealth (as India and Pakistan have done). Like many other Asian countries, Ceylon is experiencing a population explosion of almost unparalleled dimensions. Increasing at the rate of 3% annually, the total is expected to reach 18 million by 1980 as against 8.7 million in 1956.

After ten years of independence, Ceylon has yet to find solutions to the pressing political, economic, and social problems created by its diversified history. One of the most serious is the ethnic problem. More than 70% of Ceylon's population are Sinhalese, of whom roughly 90% are Buddhists and the rest Roman Catholics. The latter are descendants of converts to Christianity made largely by the Portuguese, who came to Ceylon in 1505 and were displaced by the Dutch in the middle of the seventeenth century. Another 21% of the population are Tamil-speaking Hindus of South Indian extraction. More than half of them are so-called Ceylon Tamils, the descendants of invaders who first began to enter the island in the eleventh century. They enjoy full legal equality with the majority Sinhalese. The rest, Indian Tamils, were originally brought to Ceylon by the British as laborers on the plantations, or are more recent arrivals. (The British displaced the Dutch during the Napoleonic Wars, and Ceylon was ruled from London until independence on Feb. 4, 1948.) In the main, the Indian Tamils do not wish to be repatriated to India. But they are not especially wanted by the Sinhalese, and only half of them are eligible for citizenship under a special Citizenship Act of 1949 (amended in 1952). They represent a problem under intermittent negotiation with Nehru's government in New Delhi. About 6% of the population are classified as Moors, descendants of Arab traders from the millennial past. Less than 1% are Eurasians and others.

The Sinhalese-Tamil linguistic-religious conflict, always smoldering, erupted into communal rioting in May and June, 1958. Hundreds of lives were lost (estimates range from 150 to 500), with the government striving to achieve a middle-of-the-road position without alienating the Ceylon Tamils but also without granting Tamil demands for a federalist administrative structure, with autonomous states in the predominantly Tamil areas of the north and east. As a result of this unrest, Prime Minister S. W. R. D. Bandaranaike's coalition government (based on the People's United Front) banned two extreme communalist parties, the Federalists (Tamil) and the Sinhalese United Front.

The Bandaranaike government, nomi-

nally a socialist coalition, is also challenged by increasing labor unrest organized chiefly in the port cities of Colombo and Galle by Trotskyites (who are represented in the cabinet by the able Minister of Agriculture and Food, Philip Gunawardena) and by orthodox Communists. A total of 304 strikes representing a loss of 804,493 workdays were registered in 1957 (three hundred thousand higher than the previous 1951 high); and two hundred strikes for a loss of 206,000 workdays were similarly registered in the first quarter of 1958.

The causes of this extensive labor unrest are not entirely clear. Trade unions (and the nationalist-minded Sinhalese) helped to put Bandaranaike and his coalition in power in 1956 on a program of neutralism, moderate democratic socialism and economic reconstruction. In the two years since the elections, this government has approved agreements with the Sino-Soviet bloc for credits, loans and aid totalling almost \$60 million as of March, 1958 (in comparison with \$12.5 million U. S. grant aid). Conceivably the ambition of Trotskyite Gunawardena to become the first elected chief of a Marxist government in Ceylon, comparable to the communist state government in Kerala (India), may be a factor in the current picture. Or else Ceylon's orthodox Communists, thriving on Sino-Soviet aid, may see their chance of duplicating the recent electoral advances of their counterparts in Indonesia. Growing unemployment has undoubtedly had some effect as well. In 1955 there were 71,000 registered unemployed in urban areas, as against 26,000 in 1939; and the trend has continued.

Inherent in the task of any government in Ceylon is the nature of the island's primary producing economy. Ceylon lives off three products: tea, rubber, and coconuts. These crops, from planting to exporting, account for more than 66% of the working population and approximately 95% of Ceylon's exports by value. On their earnings Ceylon must finance its food import requirements (domestic food production equals less than half of minimum needs) as well as all other manufactured and capital goods imports which its economy does not supply. Thus, like other primary producers, Ceylon cannot control its livelihood. In the boom-and-bust cycle that characterizes world trade in raw materials, rubber and coconut prices fluctuate more widely than almost any other products. Tea is less unstable, although price variations have ranged up to 11% in recent years (1948-1956).

To alter its economy through development and diversification, and to provide increased opportunity for its rapidly growing population, Ceylon adopted in 1947 the first of two Six-Year Plans for the cultiva-

tion of new crops and expansion of secondary industry. Faced with a considerable shortfall in execution, Ceylon sought the help of an International Bank mission in 1951 to formulate a more comprehensive Six-Year Investment Program for 1954-1960, calling for a total expenditure of \$531 million. In the first few years of the initial Plan, productivity increased rapidly but thereafter levelled off; and the index of per capita consumption actually declined from 103% in 1951 to 94% in 1956 (1953 = 100%).

It is clear that Ceylon, until recent years one of the most genuinely pro-Western nations among the newly independent countries of Asia, has a hard future ahead both politically and economically. Ceylon first began to shift toward a neutralist international orientation when it could not sell rubber and other exports in Western markets at prices sufficient to pay for necessary imports of food grains. This led to the first (in 1952) of a series of trade agreements with the Sino-Soviet bloc, providing for the exchange of rubber for rice.

Indonesia

During 1958 Indonesia surmounted, temporarily at least, the most serious crisis of its brief history as an independent country. A widespread rebellion reflecting deepseated regional grievances broke out in February, but failed to make much headway against unexpectedly rigorous military countermeasures taken by the national government, although guerrilla warfare continues in some areas. It remained to be seen, however, whether Jakarta would initiate equally effective action to ameliorate the underlying problems of which the rebellion was only a symptom.

Indonesia has still to find itself as a unified nation. Although most of its population is racially Malayan and over 90% profess the Islamic faith, broad ethnic and linguistic divisions reinforce the geographic separatism of the farflung Indonesian archipelago. About two-thirds of the population are packed onto the small island of Java, where the capital is also located, and this has given to the Javanese a dominant voice in the affairs of the young republic. Deep resentments have inevitably arisen, especially over the tendency of Jakarta to drain the outer islands economically for the benefit of the overcrowded Javanese.

Domestic politics have been characterized by a multiplicity of parties and grave cabinet instability, which together have militated against effective government action to deal with Indonesia's most pressing political, economic, and social problems. In the last several years a leading

role has been played by the Nationalist Party (PNI), which enjoys close ties with President Sukarno, and which (until recently) accepted support from and worked closely with the Communists (PKI). The strongly anti-Communist Masjumi, once thought to be the most popular party and which unlike the PNI and PKI depends for much of its support on the outer islands, has steadily lost influence and become increasingly disaffected.

Sukarno's New Policy

After visits to several Communist bloc countries, President Sukarno in the fall of 1956 began to call for "burial" of Indonesia's Western-style political parties, and establishment of a system of "guided democracy." His "conception," as it was gradually defined in succeeding months, consisted of a proposal for an all-party cabinet specifically including Communist participation, and a broadly representative national council to provide policy guidance for the government.

Meanwhile beginning in December, 1956, a succession of military commanders in various areas throughout the archipelago publicly defied Jakarta's authority and set up autonomous regimes, although at the same time proclaiming loyalty to the Indonesian republic.* Sporadic negotiations in the months that followed failed to heal the breach. The economic position of the central government deteriorated sharply as regional authorities conducted foreign trade on their own account and deprived Jakarta of much needed foreign exchange. The situation was greatly aggravated in December, 1957, with the seizure of Dutch properties as a result of the protracted and still unresolved dispute over West New Guinea, which the Dutch refused to turn over to Indonesia at the time of independence and which the latter claimed as an integral part of the republic. Even more alarming to many regional leaders was the steady drift leftward at Jakarta, and the growing strength of the Communists, as evidenced by striking gains in local elections on Java in 1957.

On Feb. 15, 1958, the military dissidents in central Sumatra proclaimed a provisional government at Padang headed by Sjafruddin Prawiranegara, former head of the Central Bank. Designed primarily as an extreme measure to bring pressure on the central government, the move won little overt support among other autonomist regimes elsewhere in the archipelago,

* Indonesia has been plagued by rebellion since independence. In addition to the widespread Darul Islam movement, serious outbreaks had occurred in Acheh, Celebes, the Moluccas, and elsewhere even before the military coups discussed here.

except in Celebes, or among the general population. Contrary to expectations Jakarta reacted swiftly and with surprising effectiveness against the dissidents. Within a matter of weeks the national army had occupied Padang and dispersed rebel forces in central Sumatra.

Despite collapse of its military resistance, the dissident movement has had some effect in moderating the policies of the central government. Jakarta has promised a fairer deal for the outer regions in the future, and has taken several significant steps to curb the strength and influence of the Communists. In this respect the lead seems to have come from General Abdul Haris Nasution, staunchly anti-Communist army chief of staff who won great prestige in defeating the rebel movement. There have been signs also that the Nationalist party has come to realize the folly of its close ties with the PKI. Nationwide elections are scheduled for 1959, but may be postponed to forestall further gains by the Communists.

Little Economic Progress

Indonesia shares with its Asian neighbors a burning ambition for economic development, diversification, and improvement of its low standards of living. Little if any progress has been made in this field since independence, which has been a principal motivating factor in the drive for regional autonomy.

Although the United States played a creditable role in Indonesia's struggle for independence, relations between the two countries have never been cordial. This is largely to be explained by Indonesia's resolutely neutralist orientation in world affairs, and our own refusal to support Indonesia in the West New Guinea dispute. U. S. loans and grants to the island republic have been relatively modest over the years, amounting to less than \$300 million in all. The Communist bloc has recently begun to extend assistance, which already totals well over \$100 million. United States policy not to aid the rebels, despite their anti-Communist complexion, together with the decision to sell light arms to Jakarta after repeated refusals had driven Indonesian authorities to go shopping among Communist-bloc countries, have laid the basis for more friendly ties.

Laos

The remote, landbound Buddhist kingdom of Laos is like a dagger pointed at the heart of Southeast Asia. A prime target of communist ambition (Laos shares a

common border with mainland China and North Vietnam), its eventual fate will profoundly affect the destinies of four other neighbors—South Vietnam, Cambodia, Thailand, and Burma. In the few years since independence, the Communists have already firmly established themselves in the political life of the country.

As a result of the July, 1954, Geneva Agreements, the communist-dominated Pathet Lao movement was left in control of the two northeastern provinces of Sam Neua and Phong Saly. After three more years of desultory warfare and intermittent negotiation, a compromise was finally patched up in October, 1957, providing for reassertion of national authority over the dissident provinces and integration of part of the rebel forces into the regular army. In return, the Pathet Lao gained two places in the cabinet (including one for the communist leader, renegade Prince Souphanouvong, a half-brother of the incumbent prime minister, Prince Souvanna Phouma; both are related to aged King Sisavong Vong, which lends an ironic twist to the bitter struggle for political power now going on), and the promise of new elections for twenty supplementary seats in parliament. Duly held in May, 1958, the results were a smashing communist victory, with the Pathet Lao (now renamed Neo Lao Hak Xat, or Patriotic Front) and their allies winning thirteen contests. The outcome reflected the superior organization and indefatigable energy of the Communists as contrasted with the non-Communist parties.

On July 22, 1958 communist representatives were excluded from his cabinet. The change seemed to presage greater vigilance against the internal communist threat. In the international field, Laos remains overtly neutral although resolutely eschewing formal political relations or the acceptance of economic aid from Communist countries.

Sparsely populated and underdeveloped, with no railroads and few passable roads, Laos has just begun to modernize its backward economy. Progress is bound to be slow. At present the government is wholly dependent on U. S. aid, which totals about \$45 million annually and is used primarily to support the army and police. Whatever the truth of oft-repeated charges of inept and unimaginative American administration, and widespread corruption on the part of Laotian officials, the massive aid program does not yet appear to have greatly speeded up the process of economic growth. The vast majority of the population still lives at subsistence levels. Improvement of their lot constitutes perhaps an even greater challenge than the Communists.

Malaya and Singapore

The Federation of Malaya has been independent for less than two years. Before World War II there was little demand for self-government in this "almost ideal colonial territory." Its diverse peoples seemed content to cultivate their private interests under the beneficent tranquillity of British rule. But after the war nationalist sentiment developed rapidly; and the British, in accordance with established policy throughout their farflung empire, resigned themselves with good grace to the inevitable. When the formal transfer of governmental authority eventually took place on August 31, 1957, Malaya elected to stay within the British Commonwealth and to retain close defense ties with the United Kingdom.

Malaya faces a unique racial problem, which lies beneath all political issues. As a result of indiscriminate immigration in the past, which was in part spontaneous and in part organized by the British to provide labor for their tin mines and rubber plantations, the Malays have become a minority in their own land. Today nearly 40% of the population are Chinese, while 12% are Indians and others. For the most part political parties in the Federation have been organized along communal lines. To be sure, the successful movement for independence was led by a coalition of the three principal communal groupings—the United Malays National Organization, Malayan Chinese Association, and Malayan Indian Congress; and the Alliance (as it is called) still controls the Federation government. It is headed by a Malay, Prince Abdul Rahman, who is a scion of the royal house of Kedah, one of the constituent states of the Federation, and also prime minister of the incumbent government.

But little progress has yet been made toward integrating the several races into a united Malayan nation. The Malays, easygoing and wedded to their traditional, agrarian way of life, fear and resent the more fecund Chinese, who have long since won a dominant position in the commercial life of the country. The ambitious, hardworking Chinese, in turn, are disgruntled over the favored political position which the Malays enjoy under the existing governmental set-up.

Rubber

While the Federation is relatively well off in comparison with most of its Asian neighbors, the economic situation also holds many incalculable factors. Malaya produces only a third of its food require-

ments, and its prosperity is dependent upon the fluctuating world market for the country's two major exports, rubber and tin. Thus far relatively little progress has been made toward diversification and industrialization of the economy.

In one respect there has been dramatic improvement during the last few years. Since 1948 Malaya has been torn by a Communist insurrection manned and supported almost entirely by elements from the Chinese community. While the rebellion has proved impossible to suppress completely, it has now been reduced to little more than nuisance proportions, although still demanding large scale military effort (and expense) on the part of the Federation government. This whole tragic experience has not, however, led Malaya openly to take sides in the cold war. Despite a clear pro-Western bias and continuing close ties with the British, the government has declined to join the Southeast Asian Treaty Organization (SEATO) and in other respects has pursued a generally neutralist course.

The island of Singapore was excluded from the territory of the Federation, and continues as a British colony following its own path to self-government and (presumably) eventual independence. Separated from the mainland by only the narrowest strip of water, this great commercial entrepot is the natural channel for Malaya's substantial foreign trade. But considerations of racial politics made union impossible from the Malayan point of view, at least for the foreseeable future. More than three fourths of Singapore's rapidly growing population are Chinese, and if added to the Federation would make them the majority people. In addition, Federation leaders feared the sharp leftist trend within Singapore. Communist infiltration in the colony, especially in schools and trade unions, has reached such proportions that Singapore may well freely elect a Communist-front government in the next elections, scheduled for 1959.

Nepal

Nepal, hitherto one of the most remote and backward countries on earth, has in recent years begun to progress towards political modernity. In considerable measure this has been due to the farsighted leadership of its reigning sovereign, King Mahendra. A constitution is now in preparation, and the nation's first general elections have been tentatively scheduled for February, 1959.

Even after it becomes a constitutional monarchy, Nepal's independence will con-

tinue to be profoundly affected by its special relationship with India. To understand this, one must realize the critical geographical position of this landlocked mountainous state as a buffer between Communist Chinese-dominated Tibet and India. Nehru, although yielding without any measurable opposition to Peking's occupation of Tibet, has stated that India's true borders are the Himalaya Mountains on the north of Nepal, and that India was "not going to tolerate any person coming over that barrier."

Nepal's relations with India are to a large extent governed by treaties signed in July, 1950 and June, 1957. They give to India, almost in the same terms, the rights and privileges which Britain exercised in Nepal as a result of a 1923 Treaty which presumably gave "independence" to that country. (Britain in July, 1958, renewed for ten years an agreement with Nepal permitting the recruitment of Nepalese citizens, the Gurkhas, for British battalions stationed in Asia.)

The Nepalese do not especially like their dependence on India, but there is no other access (except through China) to the outside world. India has contributed about 100 million rupees (1 rupee = 21 cents) to Nepal's plans for economic development, which by 1960 call for a total investment of 330 million rupees. However, Communist China, actively maneuvering for position in Nepal, signed in October, 1956, an aid agreement providing 60 million rupees towards the same plans. The United States has also instituted a modest technical assistance program in Nepal amounting in 1958 to \$1.8 million.

Nepal invited the Asian Socialist Conference to hold a Bureau meeting in Khatmandu, on March 26-29, 1958, which is perhaps a further indication that Nepal belongs to the non-communist world south of the Himalayas. Indian, Israeli, Japanese, Indonesian, and Burmese Socialists participated.

Pakistan

The Islamic Republic of Pakistan, independent since Aug. 15, 1947, although still a member of the British Commonwealth of Nations, has yet to conduct its first national elections, which were scheduled for Feb., 1959. The President and chief of the armed forces suspended constitutional government in Oct., 1958, and governed without the Cabinet. Elections were postponed. This fact is symptomatic of Pakistan's turbulent political record during the past decade. The nation is divided into two unequal parts separated by the 1,000 mile expanse of India: overcrowded East

Pakistan with more than half the population and only 15% of the total land area, and West Pakistan which has dominated the political life of the country since independence. (Karachi, the capital, is in West Pakistan.) Each province has a different official language, Bengali in the East and Urdu in the West.

Ever since the death of its founder, Mohammed Ali Jinnah, in 1948 and the assassination of Prime Minister Liaquat Ali Khan in 1951, Pakistan has sought vainly to find political balance. Frequent changes of cabinets, essentially a reshuffling of party leaders in the French manner, have contributed to instability.

Unlike most other ex-colonial nations which achieved independence at the end of World War II, Pakistan had no prior existence except as fairly well defined areas, predominantly Moslem in religion and culture, within the great Indian subcontinent. Its creation grew out of intense conflict between two great leaders, each now regarded as the father of his country, Jinnah of Pakistan and Mahatma Gandhi of India. From the time of the British declaration of June 3, 1947, which led to independence the following August 15 for both India and Pakistan and the partition of the subcontinent between them, the Pakistanis had just seventy-two days to organize a government and to work out an equitable division of assets and debts left behind when the British quit India.

Pakistan had to be created as a state with all the enormous and complicated machinery required by an impoverished country approximately 90% rural, less than 15% literate, with low levels of life expectancy, productivity, and a per capita income of less than \$50 a year. Relations with India were disturbed not only by the necessary division of goods and services, but also by the savage communal riots between Moslems and Hindus which followed partition and the vast transfers of population resulting from them. In the first five months after independence, it is estimated, 4.6 million Moslem refugees escaped to Pakistan from India and a proportionate number of Hindus fled to India.

Shortly after partition Pakistan became embroiled in a bitter conflict with India over the fate of Kashmir, a predominantly Moslem province ruled by a Hindu prince who chose to adhere to India. The Kashmir question, marked by an armed truce that has physically divided this strategic and beautiful area, has eluded solution within and outside the councils of the United Nations ever since the dispute was placed before that body in 1947. Relations with Afghanistan also deteriorated rapidly after independence over the problem of the

Pathans, a people who live on both sides of their common border and who appear to desire an independent Pushtunistan which would then presumably accede to Afghanistan.

In the midst of these problems, the Pakistanis have turned to upgrading their primary product economy. Food consumption among Pakistan's rapidly rising population is under 2,000 calories a day, some 300 calories below the minimum standard suggested by the U. N. Food and Agriculture Organization for the peoples of Asia. If Pakistan is to avoid starvation it must import nearly 1 million tons of food grains a year. Agriculture is the main economic problem. It provides a livelihood for over 85% of the population, produces 60% of the national income, and earns 90% of the country's foreign exchange (mainly through exporting jute and cotton; 75% of the world's jute supply comes from East Pakistan). In the arid West insufficient rainfall, and in the monsoon-drenched East recurring floods and other disasters continuously place Pakistan's agricultural production in jeopardy. While acreage under cultivation has grown during the first decade of independence, productivity per acre has declined. Irrigation, a beginning in the use of fertilizers, and better crop rotation have not yet redressed the balance. Gross food production in 1955-1956, although amounting with other agricultural production to more than the pre-war base level (1936-38), was still 9% below the pre-war per capita level.

Development Plans

To solve this recurring food crisis, to increase exports so as to earn more foreign exchange, and to set its economic house in some kind of order, Pakistan has embarked upon a program of planned economic development. In 1948, Karachi established a Development Board which by 1950 had formulated a Six-Year Development Plan. The boom and decline brought on by the Korean War required extensive revisions in this Plan. A new, somewhat more sophisticated Planning Board was set up in 1953, assisted by an American economic team financed by the Ford Foundation. Out of these efforts have come the First Five-Year Plan, 1955-1960. The essential characteristics of Pakistan's planning—as with all other countries of Asia whatever their political complexion—is the recognition of government responsibility for planning, investment and, where necessary, operations; and the decision to proceed as rapidly as possible with industrialization. Industry is regarded as the essential ingredient for transforming a rural, stagnant economy into a viable, modern one. Al-

though the private sectors of indigenous industry and agriculture are encouraged, the government recognizes that it alone has primary responsibility and capacity for acquiring the necessary capital and importing or training the necessary managerial and entrepreneurial skills.

The Five-Year Plan has four objectives: to raise national income and employment through industry, agriculture and community development; to improve the balance of payments through raising exports and managing imports; to extend social services; and to pay special attention to some of Pakistan's more depressed areas, especially East Pakistan. It contemplates an investment of 8 billion rupees in the public sector and expects a 3.6 billion related investment in the private sector (1 rupee = 21 cents). If all targets are realized, and allowing for a population growth figure of about 1.5% per annum, Pakistan's planners expect that per capita income will rise 12% by 1960. But to do this Pakistan will require external public and private financing for 4.2 billion rupees of the total 11.6 billion required. These expenditures do not include the considerable sums required for Pakistan's defense program.

External Aid Helpful

The chief suppliers of external capital have been the United States and the International Bank for Reconstruction and Development. To a lesser extent the U. N., the Colombo Plan, and private investors have helped. The 4.2 billion rupees has a dollar equivalent of a little less than \$1 billion. Toward this sum the International Bank through the spring of 1958 extended \$126,450,000 in nine loans. Beginning in February, 1951, the United States advanced a variety of grants and loans amounting to approximately \$400 million (excluding direct military aid) by June 30, 1958. However, a considerable amount of additional food surplus loans and grants were for disaster relief, and did not enter directly into economic development. U. N. technical assistance totaled approximately \$5.5 million between 1950 and 1956.

The combination of planning and external aid have had a measurable effect, particularly in the industrial sector. Manufacturing has accounted for a steadily rising share of national income since partition; in some consumer articles Pakistan has achieved self-sufficiency and even an export potential. In 1953 the government set up the Pakistan Industrial Development Corporation; by 1957 it had completed twenty-six new industrial projects (jute, paper, sugar, cement, fertilizer) and had nineteen others under way.

Pakistan will probably not complete its Five-Year Plan by 1960. Internal political instability, external difficulties with India and Afghanistan necessitating in Pakistan's view large expenditures on defense (with U. S. military aid), plus the inevitable gap between aspiration and performance, have contributed to a short fall. Nevertheless considerable improvement has already taken place, sufficiently so that with domestic tranquility and the acquired expertise of the First Five-Year Plan, Pakistan can look forward to a more successful Second Plan in the future.

Pakistan, like Thailand and the Philippines, has sought security in the U. N. and through membership in various collective security arrangements. Pakistan signed the Southeast Asia Collective Defense Treaty at Manila in September, 1954; and a year later Pakistan acceded to the Baghdad Pact. Pakistan has also associated itself with the Afro-Asian bloc in the U. N., was a sponsor of the twenty-nine-nation Bandung Conference in April, 1955, together with the four other Colombo powers (India, Ceylon, Burma, and Indonesia), and participates regularly in various activities arising from membership in the British Commonwealth of Nations.

Thailand

Since 1932, when revolution swept away the absolute monarchy and relegated the king to a figurehead role, Thailand has been plagued by political instability. In this period the country has had six constitutions, eight general elections, six successful coups and several more that failed. The most recent coup, in September, 1957, toppled from power Field Marshal Pibul Songgram, who had dominated Thai politics for most of the preceding twenty-five years. His place was taken by Field Marshal Sarit Thanarat, army commander in chief, although unlike his predecessor Sarit did not formalize his position by assuming the prime ministership.

Far from installing democracy, the constitutional revolution of 1932 simply transferred power from the royal family and old aristocracy into the hands of a new middle class oligarchy of young officers and civilian intellectuals. The heart of the political process ever since has been the struggle for power among individuals and factions within this group. Substantive issues have played a lesser part. Three main lines of division can be discerned: the conservatives, led by Khuang Apaiwong, with close ties to the old order; the militarists, headed by Sarit (formerly Pibul); and the civilian liberal leftists, whose hero is Pridi Phanomyong, now in exile in Communist China. The September,

1957, coup represented a fight among rival cliques within the militarist faction, which has substantially monopolized the scene for more than a decade.

Nevertheless, significant progress has been made in the establishment of democratic institutions. For more than a quarter century Thailand has had a parliament in which elected representatives have discussed public questions and often subjected government policy to searching criticism, even if the cabinet has not yet been brought under parliamentary control. Civil liberties have never been wholly suppressed; Bangkok in particular has a lively and often outspoken press.

Over the years Thailand's leaders have shown remarkable skill in the conduct of foreign affairs. Throughout the colonial period they managed to preserve their country's independence (although with some territorial losses) despite its exposed position between the rival imperialist spheres of France and Great Britain. In part through force of circumstances, Thailand sided with the Axis during World War II. But even this blunder, which incidentally for the most part safeguarded Thai territory from the devastation of modern war, has been successfully recouped without permanent damage. Since 1945, Thailand has pursued a consistently pro-Western course. It is, with Pakistan and the Philippines, one of the three Asian members of the Southeast Asia Treaty Organization (SEATO). Nevertheless, Bangkok has inevitably grown apprehensive over its proximity to Red China (there is, in addition, a minority of some 3 million Chinese in Thailand), and in the last few years has shown unmistakable signs of its readiness to seek an accommodation with Peiping if ever this should become advisable.

United States grants and credits to Thailand in the postwar period reach approximately \$125 million. No aid has thus far been received from the Communist bloc. The Thai have gradually been modernizing their economy in recent years, but its overwhelmingly agrarian character has not yet been substantially modified. Rice accounts for about 90% of all cultivated land, and is the most important export commodity. Other significant exports are rubber, tin, and teak.

Vietnam

Largest and most populous of the former Associated States of French Indo-China, Vietnam lies at the southern extremity of the Sinitic world. West of the Annamite mountains and throughout the rest of Southeast Asia, Indian civilization has

exercised predominant influence. Despite its great cultural indebtedness to China, a main theme of Vietnamese history has always been the recurrent struggle to win and maintain freedom against encroachment by the northern colossus.

In the last few years that struggle has entered a climactic phase. Pursuant to the Geneva Agreements of July, 1954, that ended the savage Indo-China war, Vietnam was partitioned along the seventeenth parallel into two almost equal parts. The slightly larger north was left to the Communist Viet Minh, victors over the French in the civil war just ended, but themselves obedient puppets of Moscow and especially Peiping. In the south, an untried nationalist regime at Saigon headed by the respected Ngo Dinh Diem assumed power, although few expected it to survive for long. Near chaos reigned in the south; and if renewed aggression or successful subversion did not quickly reunite the country under the communist banner, nationwide elections scheduled at Geneva for July, 1956, were bound to lead to the same end.

Or so it seemed. In fact, developments in the four years since Geneva have followed a wholly different course. To the astonishment of most observers, South Vietnam has survived and even flourished. Three main factors account for this: the astute, courageous leadership of Ngo Dinh Diem; the massive political and material support of the United States, including the protection afforded by the Manila Pact (September, 1954); and the communist decision, in line with the dictates of international strategy, to refrain from overt aggression or concerted efforts at subversion in South Vietnam.

Within two years Diem had gained control over the army and crushed the dissident "sects" (Binh Xuyen, Cao Dai, Hoa Hao) that disputed his authority in the south; contained and reduced to manageable proportions the threat of the communist underground; and thereby established conditions of genuine security throughout most of his territory. He also eliminated the last vestiges of French control, and successfully launched South Vietnam on its own international course (militantly anti-communist with no nonsense about "neutralism") in both the political and economic fields, so that today his regime has relations with over forty foreign governments.

The reception of more than 850,000 refugees from the north was handled with remarkable smoothness, and important steps taken to integrate this unexpected influx of population into the life and economy of the south (with American aid footing the bill). A land reform program was instituted, and other important eco-

nomie and social measures set in train. In the constitutional field, a referendum was held in October, 1955, deposing the absentee emperor, Bao Dai, and establishing a republic with Diem as president; and elections conducted the following March for a constituent assembly which produced a presidential-type constitution promulgated on Oct. 26, 1956. Meanwhile, the machinery of administration was gradually overhauled. Finally Diem successfully flouted the provisions of the Geneva Agreements calling for reunification elections in July, 1956, on the ground that the French and not his government had acceded to them, and thereby effectively removed lingering fears of an imminent communist takeover.

Economic Gains

Developments since 1956 have necessarily been less spectacular, although significant progress has been recorded in the economic field. Land reclamation has proceeded apace, and there have been important advances in the "infrastructure" (transportation, communications, technical training, etc.) of South Vietnam's underdeveloped economy. A modest beginning has also been made in industrialization, despite repeated charges of government mismanagement in the economic field and an unwillingness to take hard decisions. American aid continues at high levels. Since 1954, aid has averaged well over \$200 million annually, not including military hard goods. The bulk of this assistance has gone to support the armed forces and police, whose capabilities have been increasing steadily, although still not comparable to the Viet Minh. On the negative side of the ledger, there has been little relaxation of the authoritarianism and repressiveness that have characterized Diem's government from the beginning. Most civil liberties remain rigidly circumscribed, and functioning democracy remains more an ideal than a reality.

In the communist north, a ruthless dictatorship has been imposed on the land. Its severity has led to at least one fairly widespread peasant revolt in the fall of 1956, but otherwise Viet Minh rule has not been seriously jeopardized. According to creditable reports, the Viet Minh army has been doubled to about 350,000 effectives in violation of the Geneva Agreements, and armed with massive support from the communist bloc. The Hanoi regime, still headed by the veteran communist revolutionary, Ho Chi Minh, has also received large scale economic aid from the bloc, said to total nearly \$100 million, and has been making rapid progress in the industrialization of the north. Favored by possession of most of the

country's mineral wealth and almost all of its modest pre-Geneva industrial plant, and fully prepared to use violence when necessary, the north appears to have achieved greater success in this respect than Diem's government. The noteworthy

political, economic, and social gains thus far registered by the more liberal south must therefore be judged against the perspective of much more substantial military and industrial growth in the communist half of this tragic, divided country.

AFRICA

By

L. GRAY COWAN

Assistant Professor of Government, Columbia University

THE FIRES OF NATIONALISM have swept the continent of Africa since 1945 and in their wake have appeared new independent states with African leaders. Parliaments based on European models have emerged from what was regarded until recently as a continent of savage men and wild animals. Within a generation all the former European colonies will have been transformed into self-governing nations. Already the new lands of Africa are beginning to take their places on the stage of world politics.

But the change from colony to independence has not been accomplished without deep disturbances in African society. The creation of a new democracy is a complex task. In the period of colonial rule, only a tiny fraction of the population was ever permitted a voice in government and popular representation was all but unknown. Almost overnight, Africans are being called upon to vote, to decide issues of national policy, and to form political parties. And, to make independence a reality, the new countries are required to create a bureaucracy to handle the business of government, although there may exist only a few hundred individuals with the necessary education and experience to assume such responsibilities.

Independence has usually been preceded by a more or less lengthy period of nationalist agitation against the colonial rulers. The political unrest caused by the crusade to unite the people in the drive toward independence cannot simply be extinguished at the dawn of independence morning; as a result the new governments, as in the case of Ghana since 1957, have occasionally had to resort to undemocratic measures to maintain public order. Frequently also, the illusion of national unity created by the demand for independence covers old divisions within the country. The enthusiasm for nationalist slogans evaporates when they are no longer applicable and what may previously have looked

like a nation united behind its leaders may dissolve into antagonistic tribal groups.

No Natural Units

None of the new African countries are "natural" units as they stand today. All were created by the race for colonies among the European powers in the late nineteenth century. Their present boundaries often cut through areas in which the same languages are spoken; one tribe may be divided among three independent countries. Within countries, neighboring groups are divided by language, custom, or traditional hostility.

The emerging states of Africa as well as the territories that are still colonies share with other underdeveloped areas of the world problems of economic and social development which will require aid from the Western nations, and particularly America, for many years to come. All African governments are struggling against low standards of living and lack of education. In some areas illiteracy runs as high as 90%. Everywhere only a small fraction of the children are able to attend elementary schools and a mere handful are able to go on to secondary school and university. Facilities for technical and professional training are being created as rapidly as the governments can afford them, but their efforts are slowed by a lack of trained teachers.

The economic future of the independent African states depends largely on the availability of foreign capital and on technical assistance. The new African governments have little prospect of finding capital at home for extensive development.

A major difficulty facing the governments of the African states is that to make their resources attractive to foreign private investors, a heavy expenditure of public capital will be necessary to build roads, bridges, ports, electric power supplies, and other public utilities. For

these, loans from foreign governments are necessary. Although the independent African governments can depend to some extent on the former colonial powers, it is to be expected that increasing help will be asked from the American Foreign Aid Program.

Despite their serious internal problems, the new African states are rapidly beginning to play an active role in the Afro-Asian Bloc in the United Nations. In April, 1958, the first Conference of the Independent States of Africa, attended by representatives of eight governments, was convened in Accra under the chairmanship of Kwame Nkrumah, Prime Minister of Ghana. Representing over 60,000,000 people, the Conferees passed resolutions concerning economic and cultural cooperation in Africa and supported the struggle of the Algerians for independence.

The Accra conference marked the beginning of a new step in world politics when, for the first time, Africans were making their voices heard through their own governments, not through the colonial offices of Europe.

The United States has economic, political, and cultural interest in Africa. The ancestors of one out of eight Americans came from Negro Africa; the interest of the American Negro community in African problems is reflected in the efforts of Negro groups in America to assist in African education. Although Africa does not loom large in the overall figures of American trade, increasingly the United States will become dependent on the raw material resources which Africa has to offer.

The countries of Africa need outside help to industrialize their economies and to raise the living standards for the mass of their people. Their leaders will accept this help from whatever source it is offered, but they have made clear that in doing so they are not prepared to compromise their hard-won independence. Hitherto, they have looked to America for financial aid and technical assistance, but if the American response is to be adequate to meet African requirements, it will have to be on a much wider scale than it has up to the present. The support and friendship of the African nations will continue to be of constantly greater importance to America; they can only be earned by sympathetic understanding of the problems confronting these new democracies.

Ethiopia

The ancient empire of Ethiopia attained its independence long before the creation of any of the modern states of Africa. Present-day Ethiopia became a sov-

ereign state as an outgrowth of the consolidation of a number of former kingdoms which owed allegiance to the Ethiopian emperor, the King of Kings. Most of these old kingdoms (Shoa, Tigri, Gojjam, and others) are today provinces of Ethiopia.

The 350,000 square miles of Ethiopia range from arid desert, which can support only those few nomads who know the location of the wells, to lush mountain farm and grazing land. In the mountainous heart of the country the abundant rainfall is drained off through deep gorges which form parts of the Nile water system. The exact population of the country is unknown; official estimates place it at 15,000,000, but several authorities believe it to be no more than 8,000,000 to 10,000,000.

The Ethiopian kingdom is one of the few African countries which have a recorded history. Men have migrated here from Asia Minor for well over two thousand years. The chief race today is the Amhara, numbering 2,000,000. They were converted to Christianity by the Egyptian Coptic Christians, and today they remain extremely proud of the fact that they were Christians long before many people in Europe. Along with the Amharic people, there have come to Ethiopia over the centuries Greeks, Jews, Arabs, and Indians, so that today the kingdom is a mixture of peoples speaking over seventy different languages.

The fact that the ruling Amharic group have had to retain control over the country in the face of frequent tribal resistance accounts in part for some of the authoritarian aspects of Ethiopian government today. The kingdom remains essentially feudal in nature. At the top is the Emperor, Haile Selassie I (born 1891, crowned Emperor 1930), who traces his ancestry to the Queen of Sheba and to Menelek, King Solomon's first son. He retains virtually full governmental powers in his own hands, appointing the ministers who assist him and the governors who rule the outlying provinces.

Addis Ababa, the capital, fell on May 5, 1936, and Ethiopia became part of Italian East Africa, with Italian Somaliland and Eritrea, until British and Ethiopian troops reconquered the country in 1941.

Since the end of Italian occupation, Ethiopians have been in much greater contact with the world than ever before. The Italian occupation forces built several motor roads between 1936 and 1941, uniting the capital with the provincial headquarters; an efficient air service connects Addis Ababa with Khartoum and other centers. The chief rail link to the outside is the line from the capital to Djibouti, on the coast of French Somaliland. The

isolation for many centuries of central Ethiopia in its encircling belt of mountains meant that economic development was greatly retarded, compared to the Sudan and to Egypt.

Since World War II, the Emperor has made strong efforts to modernize his country, but he has been hampered by lack of educated men for the civil service and for technical posts as well as by his obligations to the feudal hierarchy he heads. Technical assistance has flowed into Ethiopia from several sources; the World Bank has granted development loans, United Nations Technical Missions have endeavored to modernize the bureaucracy, and Point Four aid has been given in agricultural and mechanical training. Foreign advisers—Belgian, Swiss, French, and even Russian—have been called upon by the Emperor to assist in developing the public health service and other departments of government.

Since September, 1952, the former Italian colony of Eritrea has been federated with Ethiopia. This gives Ethiopia an outlet to the sea, through the port of Massawa. Ethiopian trade has increased as a result, and exploration for mineral resources has been speeded up.

Although there has been active Russian propaganda in Ethiopia, the Emperor's government has maintained an independent but continuously pro-Western stand. American military and communications installations have been erected in the country. Because the Muslim section of the population is in a minority, it is unlikely that there will be any widespread inroads of Egyptian influence in the near future.

Federation of Rhodesia and Nyasaland

The Federation, stretching for more than 1,000 miles south from the borders of Tanganyika to the northern rim of the Union of South Africa, is composed of three units, Northern and Southern Rhodesia and Nyasaland. In structure the Federation is unusual in that Southern Rhodesia is a self-governing Colony, while Nyasaland and Northern Rhodesia are Protectorates, controlled by the British Colonial Office. Southern Rhodesia is governed by an elected legislative assembly of thirty members, headed by a prime minister. The two Protectorates have legislatures in which European members, elected or nominated by the Governors, predominate.

The Federal government, which came into existence under the Constitution establishing the Federation in 1953, has an Assembly of thirty-five members, seven-

teen from Southern Rhodesia, eleven from Northern Rhodesia and seven from Nyasaland. Twenty-six members are elected Europeans, six are elected Africans, and three Europeans are specially chosen to represent African interests. The powers of government are shared by the Federal and territorial governments, as in the American system.

Since Southern Rhodesia has an elected Assembly, only in this territory has there been any development of political parties. The second election since Federation was fought on June 5, 1958. Political activity within the Federation centers about the racial question. In April the United Federal Party, which had been in power since 1953, split and rejected its leader—the Prime Minister of Southern Rhodesia, Mr. Garfield Todd.

Chosen as the new leader was Sir Edgar Whitehead, who returned from his diplomatic post in the United States to head the party. The United Federal Party espouses basically middle-of-the-road views on the political advancement of the African. Opposed to these views is the Dominion Party, led by Raymond O. Stockil, which seeks to retain full white domination. Mr. Todd and some of his followers quit the United Federal Party to form the United Rhodesia Party, which vigorously contested the elections but failed to win a single seat. The voters apparently favored the moderate views of the United Federal Party, returning it to power with seventeen seats. The Dominion Party provides, however, a substantial opposition with thirteen seats, as compared to four in the previous legislature.

The immediate issue in 1958 was concerned with the number of Africans who should be allowed to vote. Todd's government in 1957 enacted a law opening the way for additional African voters by lowering property qualifications. Hitherto, the vote had been limited to literate adult citizens, who had a minimum income of \$840 or who owned property valued at \$1400—qualifications few Africans could meet. The effect of Todd's legislation was to add 11,000 African voters to the few thousand already on the rolls. Since few of these had registered to vote in the 1958 elections they could not have had any effect on the outcome of the election. However, the Dominion Party bitterly opposed the measure and promised to repeal it if elected, presumably fearing further encroachment on the European predominance. The parties are separated on the question of the rate of African advancement, but not on questions of economic philosophy. All three major parties favor free enterprise and a minimum of government control over the economy.

A Forty-Year Effort

The effort to create a Federation out of the three territories of central Africa goes back more than forty years. The two Rhodesias were early linked together through their connection to the British South Africa Company, chartered by the Crown. Administration of the two territories was under control of the company until 1923, when Southern Rhodesia received self-government; Northern Rhodesia became a Protectorate in the following year. A colonial administration had been organized in Nyasaland as early as 1907. From 1915 on there were attempts made by European groups to bring about union of the Rhodesias but the whites of Northern Rhodesia were reluctant to accept control by the larger European community of Southern Rhodesia. A Royal Commission (the Hilton Young Commission) reported favorably in 1929 on the amalgamation of Northern and Southern Rhodesia but in 1931 the British government rejected a demand by the Europeans of both territories for amalgamation, indicating that it was thought such a step was impracticable at that time for economic reasons.

The political parties of Southern Rhodesia and the elected (European) members of the Northern Rhodesian Legislative Council continued to agitate for amalgamation until, in 1937, a new Royal Commission again disapproved of the plan, this time on the ground that the policies of the two territories toward their African population were entirely different. However, in 1945, to promote closer economic union, a Central African Council was established consisting of the three governors and members of the three legislatures. Common government services were encouraged but the Council had little influence since it had no way of appealing to public opinion to support its recommendations.

Europeans Supplied Impetus

It is significant that the continuing impetus for Federation came entirely from the European community. The Northern Rhodesian whites, at first hesitant, later joined wholeheartedly because they became convinced that the Colonial Office favored African not European interest. African opinion was, from the outset, opposed to Federation, or any form of closer union between the Rhodesias because it was felt that such a union would mean permanent political control by the European minority.

In 1950, the United Kingdom government decided upon a new examination of

the whole Federation question. A long series of conferences and discussions was held in London and in the Territories, during which the Labor members of the British parliament violently opposed Federation, because they felt that insufficient attention was being paid to African interests. Representatives of African organizations protested the whole plan bitterly and refused to take part in any of the discussions. Despite the African reaction, however, the question of Federation was finally put to a referendum in Southern Rhodesia and approved by the legislatures of the three territories. Only a small fraction of the total population voted on the question (Africans, of course, had no vote) and, even under these circumstances, the proposal did not receive a large majority of votes cast.

There is little doubt that the ultimate success of the Federation will depend on the direction taken by its racial policies. In order to prevent the segregationist views already evident in Southern Rhodesia's policies from spreading, the Federal Constitution provided that control over native affairs should be vested in the territories, not in the Federal government. In those fields where Federal powers apply, African interests are guarded by the African Affairs Board. Originally proposed as a body independent of the legislature, the Board is now a standing committee of the Legislature, and is composed of three Europeans and three Africans. Its duties are to raise objections if it feels that any legislative act of the Assembly favors European over African interests, and in general to propose matters concerning African interests for possible government action.

The racial policies officially pursued by the Federation have come to be known as "partnership." The difficulty is, of course, to interpret the meaning of "partnership." Some Rhodesians believe it to mean eventual full political equality for the African; others are content to let it mean the expansion of the electoral rolls by the addition of a few thousand African voters.

Racial Attitudes Flexible

Although there are certain similarities between the racial policies of the Union of South Africa and Southern Rhodesia, it would be incorrect to describe that of Southern Rhodesia as "apartheid." In both countries, the Africans greatly outnumber the European (four to one in the Union, twenty-seven to one in the Rhodesias) and in both the European seeks to retain a position of economic and political dominance. But European settlement in the Rhodesias dates back only ninety years and for many there are still strong ties to the

homeland. Unlike South Africa, the Rhodesias have no split along national lines and there is only one official language. The system of race relations in the Rhodesias has not had time to harden into the rigid mold found in South Africa. Racial attitudes are still permissive and flexible; there is a limited but growing social intercourse between whites and blacks. Some rights and privileges are extended to the African; on the copper belt in Northern Rhodesia and elsewhere there are African labor unions and the new university at Salisbury is inter-racial. The economic boom accompanying Federation has thus far protected the position of the European worker. Partnership may yet work, but its success depends on continued impetus lent to it by the white community.

The territories of the Central African Federation have experienced rapid economic development in the past decade. Incomes earned in Northern Rhodesia more than tripled in the period 1946-56, and in Southern Rhodesia they rose 78%. Much of this increase is attributable to the influx of European immigrants and capital; today almost 70% of the money national income of Northern Rhodesia is shared by European individuals and companies, and overall national production increased 10% as a result of the increased output in mining and manufacturing. Since 1945 more than \$1 billion of capital has flowed into the Rhodesias. The bulk of this new capital was British in origin. Frequently it took the form of Rhodesian subsidiaries of large British firms. United States' private investors have contributed some \$50 million, virtually all of which was placed in copper, chrome, manganese, and lithium mines. Loans from public sources to the Rhodesias include \$56 million from the U.S. government for road and rail improvements and three loans, totalling \$122 million, from the International Bank for Reconstruction and Development, for railways and for the great electric power project of the Kariba gorge. Because of domestic prosperity the Rhodesias are becoming constantly less dependent on external sources of capital. Much of the money needed for industrial and public utilities projects can now be found from savings at home. The existence of these savings creates investment confidence abroad and makes new loans even easier for the Rhodesian government to obtain.

Large Mineral Exporter

The Federation is Africa's second largest exporter of minerals, exceeded only by the Union of South Africa. Copper from the mines of the Copper Belt has been the basis of Northern Rhodesia's prosperity. This area, the world's second largest pro-

ducer of copper, provides over 80% of the Federation's exports and 23% of the revenue of the Federal and territorial governments. Northern Rhodesia paid 65% of the total income taxes paid in the Federation. The Copper Belt employs 8,000 European mine workers and almost 50,000 African miners. It is evident that, although agricultural production is of importance, the determining factor in the Northern Rhodesian economy is the world market price of copper.

Southern Rhodesia has built its postwar economic progress on a more varied foundation. Mineral output (gold, asbestos, and chrome) amounted to \$65 million in 1956 but was exceeded in value by the tobacco crop (\$78 million). Next to copper, tobacco was the Federation's biggest export. Postwar immigration has caused a striking rise in Southern Rhodesia's industrial production. The new settlers needed homes, requiring the production of cement and other building supplies. With high levels of employment went demands for consumer goods, and to meet these, as well as the requirements of the expanding mining and agricultural sectors of the economy, a secondary iron and steel industry has arisen. Production in Southern Rhodesia has quadrupled since World War II and the labor force has likewise risen. In 1951, a total 98,000 Africans were employed in industry; by 1956, this rose to 604,000. The rate of industrial expansion in Southern Rhodesia might have been even greater, had it not been limited by shortages in transport and in labor. Although new labor might have been drawn into industry from agriculture, this would, in the long run, be injurious to the economy, since it would necessitate greater imports of food.

Nyasaland, the smallest of the territories, is also the poorest. Its economy is based chiefly on agricultural cash crops (tobacco, cotton, peanuts, and maize) and on the export of Nyasaland labor. Many of the workers for both Rhodesian industry and South African mines come from this territory. Wage levels outside Nyasaland are considerably higher and the incentives to engage in industrial work are much greater than those of the subsistence farming levels at home. Outside the territory, 160,000 Nyasalanders are employed for wages, compared to 100,000 inside, and more than \$3 million is contributed to the Nyasaland economy annually by remittances from those working in other territories.

A five-year development plan calls for expenditure of \$26 million on agricultural assistance, communications, and new African housing facilities. There is also the possibility that the entire Nyasaland economy can be transformed by the Shire Valley

electric project, creating cheap power for industry, but the estimated cost of even the first stages of the scheme has been prohibitively high. Despite Nyasaland's comparative backwardness in industrial development the role of the African producer is greater here than in Southern Rhodesia. More than half of Nyasaland's exports are cash crops from African farms, whereas in Southern Rhodesia where there are large European farms, African producers contribute little to the cash crops sold.

U. S. Investments

The Federation of Rhodesia and Nyasaland has been one of the most important areas of American private investment in Africa. Present investment and future American strategic dependence on the minerals of the Rhodesias, particularly copper, means that America is vitally concerned with the political forces shaping Rhodesia's future. The base for sound economic development exists in the territories; there are both natural resources and skilled labor available. There are reasonable prospects of maintaining a high degree of employment and hence a ready market for American and other imported goods. The Rhodesias therefore are not only important as areas for potential investment but also as markets for American exports.

The United States has a political interest in the formation of a strong democracy in the Federation in which both Africans and Europeans will participate in government. Southern Rhodesia is leading the Federation in pressing for Dominion status by 1960, which would free the Federation of all control by the British colonial office. When that point is reached the European minority will be able to determine what the racial policies of the Federation will be. The Africans have thus far reluctantly accepted the "partnership," hoping that more concrete meaning will be given to it. The election of 1958 clearly indicated that progress in this direction will be slow.

Ghana

Created an independent country on March 6, 1957, from the former British colony of the Gold Coast, Ghana is the most recent of the new states to emerge from the ferment of postwar African nationalism. Although a small country (91,843 square miles), Ghana, the newest independent member of the British Commonwealth, is the most advanced of all the purely African states of the continent. Ghana's economy, based on cocoa, is the most prosperous of the territories of West

Africa, although, at the same time, it is highly vulnerable to changes in the world price of cocoa.

Internally, Ghana is divided into three territories, the Colony, Ashanti, and the Northern Territories. The Colony is the southernmost area along the coast; more than one half of Ghana's 4,000,000 people live here. In the Colony, a large part of the cocoa crop is grown and most of the mining is carried on. Concentrated here are the trading interests of the capital, Accra, and the new artificial port of Tema, opened in 1958. To the north of the Colony is Ashanti, an old and proud federation of native states whose people resisted strongly the coming of the British. Ghana's poorest area, the Northern Territories, is populated by small tribal groups, most of whom have been converted to Islam.

The coast of Ghana was first seen by Portuguese traders in 1470. They were followed by the English (1553), the Dutch (1595), and the Swedes (1640). British rule over the Gold Coast began in 1820, but it was not until after quelling the severe resistance of the Ashanti in 1901 that it was firmly established. British Togoland, formerly a colony of Germany, was incorporated into Ghana by referendum in 1956.

The central figure in the Ghanaian independence struggle, Kwame Nkrumah, became Ghana's first prime minister. Nkrumah, educated in the United States at Lincoln University, returned to Ghana in 1947 to become secretary of a new nationalist group, the United Gold Coast Convention. Disappointed at the failure of the UGCC to press more quickly for self-government, Nkrumah formed his own party, the Convention Peoples Party, in 1949. After two more years of struggle, during part of which he was imprisoned by the British administration, Nkrumah was released to become Leader of Government Business, in 1951, and six years later chief of the government of an independent Ghana.

Political development since independence has not been without severe difficulties. The CPP first met determined opposition by the chiefs of Ashanti, who felt they were not being given their rightful place in the new government. Nkrumah's party has, however, been able to retain most of its popular support, although a demand still exists for formation of a federal government to give at least some control over local matters to state governments in the Colony, Ashanti, and the Northern Territories. Nkrumah's government has also been faced with the necessity of improving the level of education,

developing new industries, and diversifying the economy to escape dependence on a single crop. Financial aid continues to be extended by Great Britain, and some technical assistance by the United States.

The Accra Conference of April, 1958, indicated that Ghana was seeking to take the lead in urging common foreign policy objectives for the independent states of Africa. Subsequently Nkrumah visited the capitals of these states, where new plans for cooperation were laid down. He has announced that he will seek to sever the link to the British Crown within two years by the creation of a Republic. It is expected, however, that Ghana will remain in the Commonwealth.

Liberia

Unlike the other territories of West Africa, Liberia has never been a colonial possession and consequently has not shared directly in the nationalism which has swept Africa since 1945. Created as a result of the efforts of the American Colonization Society to settle ex-slaves in West Africa, Liberia celebrated 100 years of independence in 1947. Because of its historical background, the United States has had closer relations with Liberia than with any other West African country. Liberia's government is modelled on the American presidential system, and the Liberian dollar is at par with the American dollar.

A small country of 37,392 square miles, Liberia has a population of 1,500,000 (estimated). Government is largely in the hands of the 15,000 Americo-Liberians, the descendants of the slaves who were freed on these inhospitable shores. Liberia's history has been a story of a long struggle against the forces of nature and, in the early years, against the resentment of the African tribes that inhabited that area of the coast. The soil of Liberia is poor; there are no large natural harbors, and it is one of the heaviest rainfall regions of West Africa. The ex-slave settlers were not only poor, but lacked technical skills to develop the meager resources available. In the latter part of the nineteenth century Liberia was in constant danger of being swallowed up in the aggressive expansion of British and French colonies.

Within the past thirty years, however, Liberia has made remarkable strides. The Firestone Rubber Company established plantations in 1926, and the revenues from this concession (210,000 acres) helped the government to escape from its chronic budget deficits. World War II added great impetus to economic development. Because of Liberia's strategic position, American troops were landed in the country and a start was made on port development. Postwar American aid developed the port of Monrovia at a cost of \$20 million and many types of foreign goods are here unloaded at this free port and repacked without customs duties. There is an excellent intercontinental airport at Roberts Field, fifty-five miles from the capital.

The Liberian government, since 1944 under the energetic and capable leadership of President William S. Tubman, has sought to develop the country's natural resources, but even with outside help, it has thus far been unable to produce sufficient revenue to create much-needed educational and public health facilities. Illiteracy is still high among tribal groups in the interior and they have little share in the governing of the country. The rate of development has been hindered by the sparse population of many parts of the interior; some 35% of the country has only four or fewer persons per square mile.

Rubber is Liberia's most important cash crop. In 1945, it represented 96% of the total exports, but with the development of iron ore, it has declined to about 60% at present. The Firestone plantations employ 25,000 workers and produce about 40,000 tons of rubber annually. Liberia's only other major export is iron ore from the Bomi hills, 45 miles northwest of Monrovia. It is estimated that there are twenty million tons of ore, containing 68% iron, and a further 100 million tons of 30-35% iron. Exporting over 1,000,000 tons of ore a year, Liberia supplies about 1% of America's needs. Some gold and diamonds are produced, and there are prospects that new mineral sources may shortly be opened. The United States provides about two-thirds of Liberia's imports. In recent years the government has added to its revenues through extensive registering of merchant ships under the Liberian flag.

Nigeria

Today the largest remaining British colony, Nigeria is scheduled for independence in 1960, following the pattern set in 1957 by Ghana. Including the British Cameroons (under United Nations Trusteeship), Nigeria has an area of 373,250 square

miles (four times as large as the United Kingdom) and has a population of over 32,000,000.

For purposes of government, Nigeria is divided into the Northern Region, the Western Region, the Eastern Region, the Cameroons, and federal territory surrounding the capital, Lagos, which is roughly analogous to the District of Columbia in the United States. Each of the regions has its own government—a legislature and a cabinet—modelled on the British system. In Lagos, there are a federal government, with a single legislative house, and a federal prime minister (now the Right Honorable Mr. Tafawa Balewa). The Eastern and Western Regions have attained full self-governing status, and the Northern Region is expected to do so shortly. The link with the British Crown is maintained by a Governor-General, whose powers, under the most recent constitutional changes (1956), are quite restricted.

In common with the other territories of West Africa, Nigeria has advanced rapidly on the road to self-government since 1945. Although British control over the colony was established in 1900, little effort was made before World War II to introduce popular representation. An efficient system of colonial administration was established, at the head of which was a Legislative Council with a few African elected members, but only in 1946 were popularly elected Regional Houses of Assembly created.

The Regions into which Nigeria is divided reflect the major tribal groupings. In the West the Yoruba are concentrated, in the East, the Ibo and the Ibibio, and in the North, the Hausa and the Fulani. The North, the largest of the Regions, has more than half the population of the country. Its people are in great majority Muslims, with a strong cultural and linguistic tie to Egypt and the Arabian Peninsula. Their old system of rule still survives through the Emirs, the descendants of Fulani invaders who conquered the area in the late eighteenth century. As independence draws nearer, there is a strong movement afoot to create additional regions, particularly in the southern part of the North, where the so-called "pagan" people live, who are not related to the Hausa majority in the rest of the Region.

The political parties of Nigeria reflect the ethnic groupings. The majority party in the Western Region, the Action Group, is chiefly Yoruba; in the East, the National Council of Nigeria and the Cameroons is the party of the Ibos, and in the North, the Northern Peoples' Congress is the party of the Fulani Emirs. With the tribal divisions of the Regions, one of Nigeria's most serious problems before independence is to

create a national party that can count on a majority support in the country as a whole. Hitherto this has not been possible, and in consequence the stability of the country may be undermined when the last vestiges of British control are removed.

Nigeria is perhaps the richest of the West African territories in variety of natural resources. In agriculture (the occupation of the large majority of the people) the chief export crops are cocoa in the West, peanuts in the North, and palm oil in the East. Food crops (maize, cassava, yams, and rice) are produced in abundance, as are cattle in the North. Mining occupies a lesser place in the economy, but the exports of tin are valued at more than \$15,000,000 annually. Virtually the entire world's supply of columbite, a rare metal used in alloys for jet engines, comes from Nigeria. There are good prospects for commercial oil production in Eastern Nigeria. Nigerian industry is still in its early stages of development but with the rapid spread of education it is expected that within a few years many of the products now imported will be manufactured at home by skilled Nigerian labor.

If the difficulties of regionalism can be overcome, Nigeria will emerge as the strongest and most prosperous state of West Africa. Her leaders have already indicated strong pro-Western sympathies, and it is expected that she will remain a part of the Commonwealth after independence has been reached.

Northern Peoples' Congress	The Sardauna of Sokoto

The Sudan

The Sudan, among the latest of the new states of Africa to appear on the world stage, became independent on January 1, 1956. A vast territory stretching south from the Egyptian border to the northern borders of Kenya, Uganda, and the Belgian Congo, it covers almost 1,000,000 square miles—as much as all the NATO countries of Europe combined. The most recent estimates indicate a population of nearly 9,000,000. Within its borders are the Saharan desert areas of the North, the fertile central belt, the pivot of the country's

economic and political life, and the lush green tropical forests of the South.

In the North are the Berbers and other nomadic Arab tribes; further south is a scattered mixture of Nilotic and Hamitic peoples, as well as Negroid groups. Those living in the gigantic Sudd region, a marshy area between the Nile and the Congo watersheds, make their precarious living by hunting and fishing. Like other African countries, the Sudan suffers from tribal regionalism, which makes all the more difficult the work of the central government at Khartoum. There is no cultural unity in the country: the North is Muslim, the South, pagan. Arabic is considered the standard language, but it is understood only in the more economically advanced areas of the North. In the South alone, thirty-two separate languages and 250 dialects are spoken.

Recorded history of the Sudan goes back to the nineteenth century a.c., when the Egyptian pharaohs took an interest in the slaves from "Nubia." The story of the Sudan is one of a constant succession of invaders from Asia; Arab kingdoms were established by the sixteenth century, and later, Egyptian rulers seized the country. A fanatical Muslim revolt led by the Mahdi forced out Egyptian control (and British forces led by General Gordon) for a period of eleven years in the late nineteenth century. In 1898, however, Anglo-Egyptian control was re-established in the form of a condominium, which lasted formally until 1951. Under this arrangement both countries were supposed to share the responsibility of government, but effective control remained in the hands of the British until independence.

The first two years of rule by the Sudanese have been remarkably successful, in the light of the potentially disruptive issues with which the new government has had to deal. In the March, 1958, elections the Ummah Party won sixty-eight seats in the House, the National Unionists won forty-seven seats, the People's Democratic Party twenty-six. Thirty-two seats went to other parties. In the Senate, the Ummah won fourteen seats, the National Unionists five, the People's Democratic Party four, the remaining seven seats going to independents of the two factions of the Liberal Party.

The Sudan's economy is built on a single export crop, long-staple cotton, which constitutes over 70% of all Sudanese exports and is the chief source of foreign currency. Much of the crop is produced in the Gezira area, where over 1,000,000 acres of irrigated land are cultivated on a cooperative basis between the government and tenant farmers. The Gezira irrigation scheme is the world's largest agricultural cooperative. Except for basic foodstuffs, the

only other important crop is gum arabic, but there is an important potential market for the vast supplies of papyrus of the Sudd for the world's paper needs. The vulnerability of the Sudanese economy to the world price of cotton offers opportunities to the Soviets, who have been seeking to expand trade relations between the satellite countries and the Sudan.

Sudanese foreign policy since independence has been one of positive neutralism. By this, the Sudanese leaders mean neutrality, not only toward East and West but toward Egypt as well. Because both countries depend for their crops on the waters of the Nile, relations between them have in past been seriously strained. Should the Sudan (in cooperation perhaps with Ethiopia) seek to cut off Egypt from the upper Nile, Egypt would have little alternative but to settle the issue by force of arms. The Sudan has a cultural affinity to the Muslim world but she is equally conscious of the importance of her position as an African state. Such is the determination of the Sudan to avoid involvement in the East-West conflict that the signing of a technical aid agreement with the United States created a major political upheaval, during which the overturn of Prime Minister Khalil's government was narrowly averted.

The Union of South Africa

On April 16, 1958, the voters of the Union of South Africa returned the Nationalist Party to power in the House of Assembly by a majority of forty-three seats. The significance of this expression of confidence in the Nationalist Party was to reaffirm the policy of "apartheid," or racial segregation, in South Africa. The Nationalists, in power since 1948, gained a larger number of seats than they ever previously had. Opposing the 163 members of this party in the new legislature will be 103 United Party representatives and seven representatives of the non-white population. In previous elections, smaller groups, such as the Labor Party, were able to gain a few seats but in 1958 these minor groups were eliminated entirely.

Although the Nationalists, who are the strongest supporters of "apartheid," were able to take a substantial majority of the seats, the popular vote was much closer than it would appear to have been; 642,069 Nationalist votes were cast to 503,639 United Party ballots. In twenty-four seats, the United Party was unopposed so that in these no real test of strength was made. The reason for the discrepancy between the total votes cast for a party and the number of seats obtained arises from the

altering of constituencies to give heavier weight to the rural vote (which is predominantly Nationalist) as against that of the urban followers of the United Party.

The two parties owe their origins to the two main European groups, the Boers (descendants of the original colonizers of South Africa, the Dutch) and those of English origin or descent. The Nationalist Party was formed in 1915 by General James Hertzog, a Boer leader. Its early platform, a reaction to the Anglo-Boer struggle in the war of 1899, was based on the demand for complete separation from Great Britain and the formation of a Republic. In 1926, Hertzog accepted Dominion status for South Africa, but he was unable to persuade all his supporters to back him. In 1933 the United Party was formed by General Jan Christian Smuts (an internationally known Boer leader) and Hertzog. The extreme Boer nationalists shortly afterward broke away from Hertzog to remain with the Nationalists, led by Dr. Daniel F. Malan. The Nationalists continued to assert their demand for a republic, and in 1939 sought to maintain South Africa's neutrality in World War II. Their efforts were defeated and the Union entered the war under the leadership of Smuts and the United Party. In 1948, the Nationalists under Malan again came to power and today, led by Prime Minister Hendrik Verwoerd, they still continue the fight for the Republic and for white supremacy.

Although the two parties are based on the Afrikaans and the English speaking groups, there are substantial numbers of Boers in the United Party. On race policy, many Boers find no difficulty in supporting this party since it, too, stands for white supremacy. It is not prepared to go as far as the Nationalists in separation of the races, but on the question of the place of the Bantu in South Africa, the difference between the parties is one of degree rather than of principle. The United Party is pledged, in fact, not to repeal key racial legislation but it would modify and liberalize some of the restrictive measures now imposed. An added factor in Nationalist Party's favor is that South Africa has seen a period of prosperity in the five years preceding the 1958 elections and the Nationalists were able to capitalize on this.

Apartheid

The outstanding feature of the internal situation of South Africa over the past ten years has been the effort of the Nationalist government to apply a policy of apartheid. The cornerstones of apartheid, as they are erected by South African leaders, are the determination of the white South Africans to maintain a separate and distinct racial entity and, on the other

hand, the expressed desire to permit the Negro population to develop rights of national self-expression in the political and economic sphere, but in its own way, not in competition with the European. This position is based on the argument that the Bantu population differs from the European in culture, religion, and way of life, and that in consequence the only possibility for sound development in South Africa is to disentangle the two races, letting each go forward in its own way. The Boer feels that, because he is already outnumbered four to one by the Bantu and because he is living on the fringe of a vast Negro continent, he must strive to prevent the Bantu from swamping him.

In its ultimate form, the policy of apartheid is envisaged as total separation of the races by removing the Bantu from those areas presently occupied by Europeans. They would be forced to live in reserved areas which would be under African forms of local government. These areas would be industrialized gradually (using European technical and financial assistance) so that there would be no need to leave the area for work. Supporters of apartheid cite the TVA development in the United States as an example of how the Bantu areas might be developed. It is, of course, universally acknowledged that complete separation is not possible in the foreseeable future but this is the ultimate goal toward which racial policy is directed.

Major Enforcement Acts

Several legislative acts to enforce certain aspects of apartheid have been promulgated in South Africa during the past five years. The chief acts are:

- 1) Separate Representation of Voters Act (1951). This removed the colored (in South African terms, those of mixed Negro and white blood) voters from the common voting lists, placing them on separate lists to vote for their own candidates only. The Supreme Court declared the act invalid, but the Nationalists overcame the Court's objections by changing the composition of the Senate so that a two-thirds majority of both houses was obtained to override the Court veto.

- 2) Group Areas Act (1950). This act forms the cornerstone of apartheid. It defines areas in which the three racial groups (whites, coloreds, and natives) may live and own property. Under this Act, Africans may be removed from any white area by summary action of the government.

- 3) Bantu Education Act (1954). By this act, control over the education of Africans was transferred from the provinces to the Minister of Native Affairs of the Union. In many ways it is the clearest expression of the real philosophy behind apartheid, in that it clearly assumes that a European

education is not compatible with either African ideas or the place which it is expected the African will take in the future of the Union. The intention of the act is to prevent the educated African from desiring to become integrated into the European community. The Act particularly affected the schools for Africans operated by church groups, as they were permitted to continue only with permission of the Minister of Native Affairs and even then at a greatly reduced government subsidy.

In addition to these major acts, apartheid is enforced by a complex system of statutes designed to control the movements of Africans (the pass laws), and to regulate political and social activities, both of whites and natives, to keep the two groups from having more than minimum contact.

Policies of racial segregation in South Africa today are the product of more than 300 years of South African history. Dutch settlers first came to South Africa in 1652. By the beginning of the eighteenth century, nearly 2,000 settlers were established. Although the colony was made up of Europeans from various countries, it assumed a thoroughly Dutch character.

Gradually the settlements advanced northward, seeking new farming and grazing lands until they came in contact with the Bantu people who were slowly pushing southward. The historic justification of apartheid today is based on the Boer claim that they, not the present Africans, were first in possession of the present territories of the Union and that, therefore, the African has no more claim to the land than does the European. The devoutly pious Boer group is reinforced in its racial attitudes by the doctrines of the Reformed Church, which draws from Biblical interpretation reasons for segregation of the races and subordination of the blacks to the whites.

In consequence of the Napoleonic wars, Britain gained control over the Cape Colony in 1814 and within seven years 5,000 British settlers had taken up residence. The British administration freed the slaves upon whom many Boer farmers depended for labor and sought to establish equality of rights for the colored population, who worked in the main for Boer landowners. By the mid-nineteenth century the present form of the Union was emerging; settlers were scattered on the northern side of the Vaal and Orange rivers. In 1877, the British annexed the Transvaal territory, and although it was relinquished again in 1881, the act created bitter resentment among the Dutch settlers. Discovery of gold a few years later, and the work of Cecil Rhodes in opening the diamond industry, added new and complex problems

to the relationship between the British administration and the Boers. The conflict between the Imperialism of England and the Republicanism of the Boer colonies culminated in the Jameson Raid which was the opening gun of the bitter Anglo-Boer war (1899-1900).

Bitterness Remains

The two years of war paved the way for the creation of the Union of South Africa, but it left behind a bitterness which lasts until today. The Union in its present form came into existence in 1910 by the South Africa Act. At its head is the Union Government and within each of the four provinces (Cape, Transvaal, Orange Free State, and Natal) there are provincial parliaments. The dual nature of the Union is illustrated by the fact that there are two capitals (Cape Town and Pretoria), two official languages (English and Afrikaans), two flags, and two national anthems. The Union Parliament is made up of the House of Assembly and a Senate of eighty-nine members, each province being represented in the Senate in proportion to the number of voters in it. The Union Government controls the bulk of the power and employs the larger part of the civil service. Here again, the racial question enters the scene; only "civilized" (i.e. European) labor is generally employed, although Africans occupy minor posts, such as clerks, and interpreters.

Separation of the races appears in almost every aspect of South African life, from the conduct of government to the contacts between individuals. Essentially based on historic bitterness, fear of loss of economic and social privileges, and rationalized by religious doctrine, the apartheid of South Africa runs counter to the trend toward closing the gap between Europeans and Africans seen in most other areas of the continent. Apart of its moral aspects, apartheid as a doctrine has not as yet produced much concrete result. It has failed to stem the rush of Africans to urban areas, and, with the growth of industry in the South African economy, unless new sources of European labor are found, the Bantu will continue to find work in the cities. Moreover, the Africans have shown little evidence that they appreciate the efforts of the government to give them separate education and traditional local government bodies.

The Weakness of Race Theory

The real weakness of the entire apartheid theory lies, of course, in its failure to come to grips with the European's need for African labor if European customs and standards of living are to be

maintained. Separation of the races, were it carried out fully, would imply radical changes in the European way of life (the absence of African household servants, for example) and extensive alteration in the plans for future industrial development. The process of industrialization itself creates an interdependence between the African and the European which tends to defeat the direction taken by apartheid. The African's wants and aspirations become the same as those of the European if he lives in a European environment and, at the same time, as the African's services are increasingly needed in industry, it becomes all the more difficult to separate him from the European.

Internal tensions created by the implementation of apartheid have not prevented a rapid expansion of the South African economy. South Africa had traditionally a predominantly agricultural economy and, even from the earliest days of settlement, it was reasonably prosperous, except of course in the areas of African subsistence farming. The rise of a mining industry—with the discovery of gold and diamonds—transformed the South African economy but gradually since World War I the economic focus has been shifting to the cities and the industries growing up around them. Growth in the national income of South Africa has been almost uninterrupted since 1919 (except for the depression). In the industrial sphere alone, the output of South African industries rose from \$58 million in 1929 to over \$4 billion in 1957.

The Union is well known as one of the world's chief gold producers (over \$10 billion worth has been produced so far). In addition, there have been developed important mining operations in uranium and other fissionable materials, as well as chrome, manganese, and copper. No supplies of oil have yet been discovered, nor are there extensive sources of hydroelectric power but coal, of which there exists ample resources, can be delivered more cheaply at the minehead than anywhere else in the world, so that industry has no problem in obtaining needed electricity.

Manufacturing now contributes the largest share of the Union's national income. Over 50% of the raw materials used in industry are produced within the Union. Some 300,000 Europeans are employed in industry and over 500,000 Africans. There is, however, considerable gap between the wage scale of Europeans and of Africans and for some industries this has created a serious problem. Faced with rising costs, industry has sought to employ more African labor, but, since the Government is not prepared to see the living standard of the unskilled white worker fall below

"civilized" standards, pressure and inducements have been applied to retain white employees. Import quotas and tariff manipulations have aided some industries to escape the inevitable consequence of higher prices but only at the cost of severe inflationary pressures at home.

New Capital Needed

Economic expansion has created a need for new capital resources and since World War II over \$2 billion of foreign capital—chiefly British and European—has flowed into South Africa. Some \$289 million of American private capital has been invested in the Union and the American Export-Import Bank has loaned \$150 million for development of uranium resources. A further \$160 million has come from the International Bank. If the Union is to continue its growth both in the manufacturing and in the processing of raw materials there would appear to be little alternative to employing and training more African workers since the skilled labor supply in some industries is already short. It remains to be seen how this need can be reconciled with the expressed goals of apartheid.

To a greater degree than any other parts of Africa, the Union is dependent on the United States and Great Britain for economic support. Gold, the price of which South Africa does not control, makes up in value half the total exports. The Union's economy is therefore sensitive to the fluctuations in the price of gold on the world market. South Africa's exports to the United States covered only one-quarter to one-third of her imports from this country so that there is a continuing dollar deficit, making necessary retention of wartime exchange controls.

The Union also has a vital strategic interest for the United States, since the alternate shipping lanes to Europe, if the Suez Canal were closed, could be controlled by South Africans from their own bases. The South African government has declared that it is taking a close interest in developments in Africa north of the Union and in particular, the government has announced that it is keeping watch on possible communist activity within the Union and on attempts to influence the Union's racial policies from other parts of Africa. The United States has long been under pressure from groups at home and from some allies to take a strong stand of disapproval against South African apartheid doctrines. We have however regarded such a step as interference with the internal affairs of a foreign nation and have indicated no official opinion on the matter.

LATIN AMERICA IN GENERAL

By

ROBERT J. ALEXANDER

Associate Professor of Economics, Rutgers University

CONTEMPORARY Latin America cannot be understood except against a background of very rapid change. Since World War I, industrialization has hit Latin America with increasing force, and has brought in its train profound alterations in the nations' economies, social systems, and political life.

Today no country is totally untouched by these currents, though some remain relatively less affected than others.

Developments in Latin America are part of a world-wide movement, arising from the spread of modern manufacturing industry from Western Europe and the United States, into those areas generally known as "underdeveloped." The demands of the older industrialized countries for foodstuffs and raw materials introduced Latin America to modern industry. Plantations and mines established to supply needs of the industrial nations used modern methods, trained groups of industrial workers, and in some cases accumulated small amounts of capital for investment in further industrial expansion.

The economies of most Latin American countries were excessively dependent on the export of a narrow range of raw material or food products. Brazil and half a dozen others depended mainly on coffee; Chile on nitrates and copper; Cuba, Puerto Rico and most of the British West Indies on sugar. The Latin American countries depended on the sale of these goods to pay for importation of manufactured products and some foodstuffs.

Opening up of raw material and foodstuff resources of Latin America was made possible by heavy private investments from abroad. Frequently those making investments obtained extensive privileges; foreign investors often meddled in local politics; not infrequently during the period of "Dollar Diplomacy" they called on home governments for diplomatic and military help when they got into difficulties.

The Industrial Revolution

The prices of Latin American raw materials and foodstuffs were subject to rapid changes, leading to great instability in income of the Latin American exporting

nations. Furthermore, on three occasions—during the two world wars and the depression—these countries found themselves cut off from markets to which they sold their products, and even more, from sources from which they imported needed goods. As a result, they increasingly undertook to produce for themselves basic consumer goods, simple processed foodstuffs, and construction materials. The Industrial Revolution had begun in Latin America.

Today, industrialization has become virtually an article of faith with most politically active people in Latin America. With demands for manufacturing industry, there is desire for extension of transportation facilities and public utilities, development of sources of raw materials, and diversification of agriculture.

Such economic development has inevitably engendered forces seeking social change. Pre-industrial Latin America was for the most part a region of very large landholdings, where the great majority of the people scraped subsistence from soil granted for their use by the landlords, in return for virtually free labor on the rest of the landlords' holdings. They thus provided little or no market for manufactured goods.

The government, like the economy, was generally in the hands of landowners, and politics throughout the nineteenth and early twentieth centuries was largely a game played by elements of the upper strata. The lower economic classes were called upon to play little role, except from time to time to provide manpower for contending armies in not infrequent civil wars. The ruling oligarchy depended greatly on the armies to maintain the status quo, and this, together with general political instability, led to development of a tradition of military meddling in politics and frequent army dictatorships, which still persists.

Changes, Social and Economic

The new social classes brought into existence by the growing industrialization in Latin America sought to change this traditional economic and social pattern. The ruling landowner class frequently was hostile to industrialization, fearing that it would undermine its grip on the soil.

They also feared that urban industries would draw workers from the rural labor force. The new class of industrialists, on the other hand, needed land redistribution to bring rural workers into the market and give them income to buy manufactures.

As a result, since World War I, there has grown up in Latin America a wide range of movements of protest. In spite of ideological differences, all these movements have agreed on the need for economic development, for obtaining "economic independence," and for breaking the domination of landlords and military men in politics and society. Virtually all these movements called for greater participation of the masses in political life, and most sought the establishment of political democracy.

Some of these movements have arisen within the traditional Conservative, Liberal, and Radical parties. Others have formed new parties on European models, such as the Socialists, Communists, and Christian Democrats. But most political parties seeking to transform Latin American society are indigenous groups.

A minority of these indigenous parties, such as the Peronistas in Argentina and the followers of Getulio Vargas in Brazil, have had a totalitarian twist. However, a great majority, which may be called "Aprista" or "national revolutionary" parties, have included attainment of political democracy among their fundamental objectives. Aprista parties have appeared in Peru (the Partido Aprista Peruano), Venezuela (Acción Democrática), Paraguay (Partido Febrerista), Costa Rica (Liberación Nacional), Puerto Rico (Partido Popular Democrático), Bolivia (Movimiento Nacionalista Revolucionario), and for a while in Cuba, (Auténtico and Ortodoxo parties). The Mexican Revolution has developed a party of a peculiar genre, the Partido Revolucionario Institucional, the exact counterpart of which cannot be found in any other Latin American nation.

It is these indigenous parties that have largely prevented communism from being more powerful than it is in Latin America. Although there is a Communist Party in every Latin American country, Communist influence has risen and fallen at various times. It was at its peak during World War II, but subsequently suffered a series of defeats. In recent years, the Soviet Union has sought to strengthen its influence and that of the Communists by dangling lucrative trade proposals before Latin Americans. However, generally in those countries which have strong indigenous social reform parties, the Communists have remained weak.

The struggle between dictatorship and democracy, the most critical political problem in recent years, can only be understood in terms of these fundamental economic, social, and political changes. There is a great variety of dictatorships and there are varying shades of democracy in Latin America. Some of the dictatorships of recent memory have been attempts to prevent the development of a social revolution, others have grown out of revolutionary movements, while still others have been purely military or personal regimes, but have inadvertently brought about changes which paved the way for broad social reform. In our discussion of individual countries, these differences should become more evident.

Mexico

Modern Mexico is a product of the revolution which began in 1910. This revolution made social, economic, and political changes which paved the way for the rapid economic development since 1940, as well as preparing the basis for a slow development of political democracy.

Pre-revolutionary Mexico was a semi-feudal country. The land was in the hands of a small group of large landowners. During the regime of Porfirio Díaz, from 1875 to 1910, virtually all Indian communities had disappeared, and almost all the government's lands had been given to favored friends of the Díaz administration. Most of the country's inhabitants were landless tenants. Railroads had been built widely under Díaz and some manufacturing industries had been started—particularly textiles around Puebla and Mexico City, and a small iron and steel plant in Monterey—but their market was limited by the poverty of the people.

The revolution began as a revolt against the re-election of Díaz, an octogenarian. However, in a short time the movement took on a social tinge as indicated by the revolutionary constitution of 1917, which provided for thorough-going agrarian reform, extensive labor legislation, and an assertion of the nation's ownership of sub-soil resources.

There were various stages to the revolution, which culminated in the administration of President Lázaro Cárdenas from 1934 to 1940. During the six years of his rule, agrarian reform was virtually completed, the constitutional assertion of the nation's right to sub-soil resources was made effective by nationalization of the petroleum industry, and the Banco de México was reorganized.

Agrarian reform created a large group of small farmers, many with personal title to

their lands, others members of "ejidos" or cooperative farms. The growth of this class meant creation of a much larger internal market for manufactured goods, and paved the way for industrialization.

After the war, Mexican industrialization was aided by extensive foreign investment, particularly from the United States. Automobile assembly plants, electrical products, factories, and clothing manufacturing plants, were among these new foreign-owned establishments.

The country's social service institutions and educational system expanded rapidly. An ample social security system was established in the 1940's, while the Ministry of Education steadily received the largest amount of money of any government department.

Democratic institutions became stronger and Mexico had perhaps the most stable government in Latin America during the 1940's and 1950's. Three successive presidential elections were held without any major incident or attempt to overthrow the government in 1948, 1952, and 1958. Freedom of the press, speech, and thought were generally respected. The principal weakness of the country's democratic structure was the fact that elections were still "managed" by the government party, which in 1948 acquired the name Partido Revolucionario Institucional.

The PRI has a very strongly entrenched machine. Virtually all government employees belong to it, and the labor and peasant unions with few exceptions support it.

In addition to the PRI there are at least three other permanent parties in Mexico: the Partido Accion Nacional, Partido Popular, and Partido Comunista. The first is a conservative group which is strongly Catholic in its orientation. The second is headed by Vicente Lombardo Toledano, leader of the Communist trade-union setup in Latin America, the Confederación de Trabajadores de America Latina. The Partido Comunista is the official Communist Party of Mexico.

SOUTH AMERICA

Argentina

May 1, 1958, marked the beginning of a new period in Argentine political development. On that day Dr. Arturo Frondizi was inaugurated as constitutional president of the republic after two and a half years of provisional government.

Inauguration of Dr. Frondizi ended almost fifteen years of domination by Juan

Domingo Perón. He was military dictator between June, 1943, and June, 1946, and had been President of Argentina for more than nine years thereafter. Overthrown by a military insurrection in September, 1955, Perón continued to be the major problem facing the army and navy officers who governed the country until May, 1958.

One of the principal tasks facing Dr. Frondizi when he took over the government was that of putting a definitive end to the Perón era. His success in achieving the pacification of the country will undoubtedly depend upon his ability to handle Argentina's economic problems.

Frondizi realized early in the Perón era that Perón's dictatorship had brought fundamental changes to Argentina. It had transferred political power from the agricultural landlord class to the cities; it had stimulated industrialization of the country; it had resulted in development of a 2,500,000-member labor movement, a powerful force even after the departure of Perón. He was virtually the only major politician to understand these changes, and even during the Perón administration he sought to make it clear that he was not opposed to the social and economic gains of the workers under Perón, but only to his dictatorship and his mistaken economic policies.

Sought Perón Support

Frondizi frankly sought the votes of Perón's followers during the 1958 campaign. He was assured of most of them when Perón sent a message backing Frondizi. He also enjoyed the support of the Communists and the right-wing Catholics organized in the so-called Union Federal.

The size of Frondizi's victory assured that no attempt would be made to keep him from becoming President. There were elements in the armed forces violently opposed to Frondizi, feeling that he was little better than Perón. Once he had won, there was general agreement among civilians of all political parties that military domination of the government be ended.

Frondizi faces serious problems. He must restore the confidence of the workers in the government's intentions towards them. The first move of the Frondizi government in this direction was to decree a general wage increase for all wage and salary earners.

The most serious problems facing Frondizi can be summed up under two headings: decapitalization of the country's economy, and a strongly unfavorable balance of payments.

The capital equipment of much of Argentina's economy is grossly out of date. About 60% of railroad steam locomotives

are over forty years of age. Much track is dangerously run down. At least several hundred million dollars will be needed to put Argentine railroads into good condition.

The highway system suffers the same lack of repair. The country is grossly under-equipped with agricultural implements and machinery, of prime importance to production of meat, wheat, corn, and linseed, upon which Argentina depends for most of its foreign exchange earnings. Even much of the equipment of the nation's manufacturing industry is inadequate.

Unfavorable Trade Balance

The job of re-equipping the Argentine economy is seriously hampered by the country's unfavorable balance of trade. It is estimated that several billion dollars will be necessary to import equipment or pay interest on loans raised to bring in the machinery. However, Argentina has been spending abroad about \$300,000,000 a year more than the value of the goods it has been selling to foreign countries. This makes it exceedingly difficult to pay for the necessary imports of capital goods.

There are two ways to remedy this situation: increasing exports and decreasing non-capital imports. During the last few decades there has been a constant decline in the amount of Argentine agricultural products available for export—owing to increased consumption within the country and the decline in the nation's output.

The Frondizi regime has programs for expanding agricultural production for export. It proposes to stimulate local production of agricultural machinery, increase distribution of up-to-date technical information, and encourage the shift from export products such as wheat, which are highly competitive, to corn and meat, for which there is a larger and readier market.

At the same time, the Frondizi regime hopes to reduce imports of petroleum, the single largest import item. Although Frondizi proposes to leave overall control of the oil industry in the hands of the government oil firm, YPF, it also is anxious to obtain the services of foreign oil companies in exploiting Argentina's admittedly rich petroleum reserves.

Bolivia

Since April, 1952, Bolivia has been going through a profound social revolution. Before then, Bolivia was one of the least

progressive countries of Latin America. Most land was in the hands of a small number of large landowners. Some of these traced their ancestry to the Spanish Conquistadores; the forebears of others had stolen the land from the great majority of the people, the Indians, during the nineteenth and early twentieth centuries. The Indians were given small plots of land to grow enough food for their own sustenance, and in return had to work the acres of their landowner and, in addition, give him periodic personal service gratis.

Mining was the principal occupation of the non-agricultural segment of the nation. Bolivia depends for more than 90% of its foreign exchange on the export of minerals, principally tin. Most mining properties were in the hands of three big companies, largely foreign-owned.

In the wake of the Chaco war with Paraguay between 1932 and 1935, which Bolivia lost, a group of new parties arose. One of these was the Movimiento Nacionalista Revolucionario, a nationalist party with a broad program for social change. For two and a half years, between December, 1943, and July, 1946, the MNR participated in the government of President Gualberto Villarroel and its leader, Victor Paz Estenssoro, served as Minister of Finance. During this period the MNR won the loyalty of the country's tin miners by helping them to organize a strong union federation. Under sponsorship of the MNR, a Congress of Indians met a few months before the overthrow of Villarroel, and for the first time the Indians were able to present their grievances to government officials. Villarroel decreed the abolition of compulsory personal service to the landlords, although this decree did not become effective until after the 1952 Revolution.

Villarroel was overthrown in July, 1946, and for nearly six years the MNR was illegal and persecuted. However, it showed that it had won the support of the voters when, in May, 1951, it won a presidential election, with Victor Paz Estenssoro as its nominee. It was not immediately able to enjoy the fruits of its victory, however, because a military junta took over and ruled for eleven months.

In April, 1952, the MNR seized power through an armed revolt. The military police (carabineros) and the armed populace of La Paz and the mining towns defeated the army. Victor Paz Estenssoro was called back from exile to become president.

Paz Estenssoro's regime brought about fundamental reforms. One of its first decrees was to proclaim universal adult suffrage, thus giving the Indians the vote. In October, 1952, the revolutionary government issued a decree nationalizing the

Big Three tin mines, which were turned over to a newly organized government firm, the Corporación Minera de Bolivia. The COMIBOL was faced with tremendous difficulties. Virtually all foreign engineers who directed the operations of the mines were withdrawn or resigned. Labor discipline was relaxed after expropriation, and the mines had surplus workers. More disastrous was the drastic decline in the price of Bolivian mineral products.

In 1957 the situation was made more difficult by the re-establishment of a quota system for world tin production, as a result of a world surplus of the mineral.

Much more fundamental than tin nationalization has been the MNR program of giving most cultivated land of the high plateau to the Indians. Although this redistribution has been progressing slowly, virtually all Indians now have some land and are prospective recipients of more. The MNR government has carried out a program to bring the Indians information on new and better methods of production and to extend them credit. In both of these projects the Bolivians have received extensive help from the U. S. Point Four program. The MNR administration also got underway an extensive program of education for the Indians.

Economic development included building a road network to bring isolated agricultural areas into contact with the market, and opening up the eastern two-thirds of the country, almost completely underdeveloped heretofore. The country also was converted from a heavy importer of petroleum products to a net exporter of oil.

In June, 1956, the MNR presided over its first elections. The government candidate was Ernán Siles, and he won an overwhelming victory. His government continued the general lines of the revolution. Siles relaxed the rigid and undemocratic controls which Paz Estenssoro had exerted over the opposition, keeping no political opponents in jail and allowing an opposition press.

Siles also came to grips with the inflation afflicting Bolivia for a couple of decades, with the result that further inflation virtually ceased, and the foreign exchange value of the boliviano remained stationary at the rate of 8,500 to the dollar. It had been as high as 14,000 to the dollar.

Although the national revolutionary government was bitterly attacked by opposition within the country and by powerful forces abroad, it was continuing to carry out the most profound social change in Latin America since the Mexican Revolution.

Brazil

Since World War II the Brazilian economy has been expanding more rapidly than that of any other Latin American country.

Until 1930, the economy, society, and politics of Brazil was dominated by the owners of coffee "fazendas" in the states of São Paulo and Minas Gerais. The country depended on exports of coffee to pay for manufactured goods and some foodstuffs. Cacao, natural rubber, and a few minerals provided the rest of the nation's export income. The textile industry and some other manufacturing enterprises had been established in São Paulo, Rio de Janeiro, Porto Alegre, Recife, and a few other cities.

The revolution of 1930 placed Getúlio Vargas, former governor of the state of Rio Grande do Sul, in the presidency, where he remained during the next fifteen years. Vargas governed as revolutionary Provisional President until 1934, when, after the writing of a new constitution, he was elected constitutional President. In 1937, soon before his term expired, he made a coup d'état which installed him as dictator, which he remained for eight years.

During the Vargas period, political power passed from the hands of the coffee oligarchy to those of the industrialists and workers of the coastal cities. The Vargas regime encouraged the growth of manufacturing.

Vargas was overthrown in October, 1945, by an army coup d'état. Five years later he was again elected president. In August, 1954, Vargas committed suicide, after the Army had once more suggested that he go on an "extended vacation."

Two of the major Brazilian political parties were founded by Vargas—the Partido Social Democrático and the Partido Trabalhista. The former, a conservative group, draws much of its financial support from the new industrial class which arose under the Vargas regime.

The Partido Trabalhista was originally organized in 1945 by Vargas supporters in the Ministry of Labor and the government-dominated trade unions which had been established during Getúlio's dictatorship. It still draws its principal electoral support from urban workers who tend to regard it as "their" party.

In the 1955 election the Partido Social Democrático and Partido Trabalhista Brasileiro joined forces. Juscelino Kubitschek of the PSD was their successful candidate for President, and João Goulart of the PTB was their victorious nominee for Vice President.

The União Democrática Nacional became the principal anti-Vargas political party, and generally is regarded as representing those economic groups which were displaced from power by the Revolution of 1930. It draws its electoral support principally from the middle class.

The Communist Party chief is Luiz Carlos Prestes, a one-time Army captain who was a leading figure in the military revolts of the 1920's.

Early in 1958, the Supreme Court quashed charges pending against Luiz Carlos Prestes, who dramatically came out of hiding. Although the Communist Party was not officially legalized, it was from then on able to function virtually as if it were a legal political party.

Although the term of office of President Kubitschek will still have two years to run at the end of 1958, preparations for the presidential campaign of 1960 are already under way.

Contemporary Brazilian politics is complicated by a rampant inflation. Brazil has suffered from creeping inflation at least since the middle of the nineteenth century. However, since World War II the rhythm of inflation has increased rapidly. Although wages have increased also, in many parts of the country they have not kept up with the rise in prices. The result is mounting discontent among the urban workers of Brazil.

Economic development of Brazil since 1945 has been phenomenal. The metallurgical industry expanded rapidly, with the establishment of the Volta Redonda steel plant. A heavy chemical industry was established. The aluminum industry grew rapidly. The automobile industry expanded and was scheduled by 1959 to produce 90% of the components of its vehicles within Brazil. The country began to produce such things as typewriters and adding machines.

The pace of Brazilian development gives promise of making Brazil one of the world's major industrial nations. Its muddled politics and incompetent governments, continuing inflation, foreign exchange shortage and the tendency of agriculture to lag behind the development of industry are the chief handicaps to expansion.

Chile

Chile's long tradition of democracy stood another test during 1958 when a vigorous presidential election campaign saw five candidates in the race. This election was held against the background of a

severe economic crisis, which for some years had greatly strained the nation's democracy. Jorge Alessandri, nominee of the Right Wing Conservative and Liberal Parties, was the winner in the vote on September 4.

Chile is an elongated country spreading almost three thousand miles along the mountainous backbone of South America, nowhere more than seventy-five miles in width. Its population is a mixture of Indian and European stock. The country is perhaps most famous as a producer and exporter of nitrates and copper, upon which it depends for virtually all its foreign exchange.

Industrialization of Chile began during World War I and was particularly stimulated by the depression, which disastrously reduced available foreign exchange, and threw the country on its own resources for many of the manufactured goods it needed. The government-owned Chilean Development Corporation helped establish small metallurgical factories, pharmaceutical plants, an oil refinery, wood-working establishments, and other manufacturing enterprises. It also undertook exploration for oil wells in far-southern Tierra del Fuego, and the establishment of a major steel industry, the Cia. Acero del Pacifico, in Talcahuano.

Only agriculture has lagged in Chilean economic development. Although Chile used to be an exporter of wheat and other agricultural products, during the last twenty years it has become an increasingly large importer of these commodities.

Since World War II, the country has been plagued by a racing inflation. Prices rose with increasing rapidity as the result of government expenditures for economic development, pressure on wages, and failure of agriculture to provide necessary foodstuffs.

Democracy Withstands Pressure

Continuing inflation represented a constant threat to Chilean democracy because of the social pressures and discontent it generated. However, the roots of Chilean democracy are deep and so far it has withstood the worst economic pressure, although Chilean politics has grown increasingly chaotic.

From 1939 until 1952 the government was dominated by the middle class, slightly left wing Radical Party which provided three successive presidents—Pedro Aguirre Cerda, Juan Antonio Rios, and Gabriel González Videla. This period of Radical control was marked by rapid economic development and mounting inflation.

The beneficiary of this situation was General Carlos Ibáñez. By the early 1950's, the public had forgotten that he had been a dictator, but remembered that he had maintained "order." He was elected President with the support of the relatively small Agrarian Labor and Popular Socialist parties, but most of his backing came from independents tired of the existing parties.

President Carlos Ibáñez did not again become a dictator. In the economic field his regime attempted to curb the inflation. He negotiated new agreements with the copper and nitrate mining companies, by which these interests expanded their operations.

In spite of his popularity at the time he came into office, Ibáñez soon lost virtually all of his support. In the presidential election of 1958 there was no contestant who was a supporter of Ibáñez.

Colombia

For more than a decade Colombia has been going through a severe political crisis, although its economic development has gone forward. This political crisis has submitted a nation once in the vanguard of democracy to a series of dictatorships. The last of these was overthrown in May, 1957.

Until World War II, Colombia was principally a coffee producer. During the war industrialization gained momentum and the country became virtually self-sufficient in cotton and woolen textiles.

Since the war, industrialization has continued. In the early 1950's a steel industry was established at Paz del Río, and chemical, textile, cement, and metallurgical industries grew in a number of other cities. Unlike industrialization of many Latin American countries, that of Colombia has not been concentrated in a single city. Although manufacturing got its start in the city of Medellín, there were, by the 1950's, important industrial concentrations in the capital, Bogotá; in Cali, in the center of the Cauca Valley; in Baranquilla, at the mouth of the Magdalena River; and in several smaller cities. At the same time, agriculture became more diversified.

Despite the growth of the economy, the political picture has been a sad one since 1948. Late in 1949, the leader of the right wing of the Conservative Party, Laureano Gómez, was elected president in a poll boycotted by the Liberal Party on grounds that a democratic election was impossible.

Attempts by Gómez to establish a corporate state in 1953 resulted in his overthrow by General Rojas Pinilla, Army

commander. In August, 1954, he had himself elected constitutional president by an assembly he himself had named. Thereafter, his regime became increasingly dictatorial.

Finally, in May, 1957, Rojas Pinilla was ousted by a military coup by some of his closest associates. A military junta took over, promising elections within a year. Meanwhile, the Liberals and Conservatives agreed that for twelve years the presidency would alternate between the two parties and congress would be divided equally between them. This agreement culminated with elections of Congress in March, 1958, which showed the Liberals to outnumber the Conservatives by 3 to 2; and of the President, with Alberto Lleras Camargo, a Liberal, being named in May, 1958.

Ecuador

Highland Ecuador is perhaps the Latin American area least touched by the revolution of modern times. The great majority of the people, the Indians and the descendants of the Spanish conquerors whose lands they cultivate, live much as they have for the last four centuries.

Along the coast there is an entirely different civilization. A large part of the population consists of Negroes and mulattoes, and the economy is commercial instead of agrarian. Guayaquil, the country's chief port, is the metropolis of this region. Commercial agriculture, petroleum, manufacturing, and trade are the principal occupations.

Politics is largely an activity of the cities. The two traditional parties are the Conservatives and the Liberals. The latter dominated the government, with the aid of the army, from the 1890's until 1956. These Liberal regimes were exceedingly unstable.

Two significant minority parties also existed during the latter part of the period of Liberal domination: the Socialists and the Communists.

In 1952 a new phase opened in Ecuadorian politics. By that time the old parties, particularly the Liberals, had begun to disintegrate, largely because they treated politics too much as a game and made little effort to cater to the discontent in the cities and along the coast.

A large group of independent voters broke away from the existing parties to support the candidacy of Dr. José Velasco Ibarra in 1952. He had been twice president and twice deposed. He was an Independent Liberal who had flirted with the Socialists, the Communists, and then the Fascists.

Velasco Ibarra governed with the help of the Conservatives and his support for the candidacy of Camilo Ponce Henríquez, the nominee of the Conservatives in the 1956 elections, was obvious. The victory of Ponce Henríquez was the first triumph of the Conservatives in half a century and there was much fear on the part of Liberals, Socialists, and others that he would preside over a dictatorial regime. However, by 1958, President Ponce Henríquez had comported himself in democratic fashion.

The three administrations since 1948 made no fundamental changes in the social and economic structure of the country—the revolution is still to come to Ecuador.

Paraguay

Paraguay, a land-locked nation in the heart of the South American continent, and populated by mixed-blood descendants of the native Guaraní Indians and their Spanish conquerors, is economically one of the least advanced Latin American countries. Its government since 1954 has been in the hands of General Alfredo Stroessner, the most recent of a series of dictators who have dominated the nation since the Chaco War with Bolivia in the 1930's. His government, put in power by a military coup d'état in May, 1954, is based on the bayonets of the Army and the support of the traditional Colorado Party. President Stroessner's hold was confirmed in July, 1954, by an "election" in which he was the only candidate. Four years later he was "re-elected" in a similar type of contest.

The Stroessner government does not allow any public opposition. However, like its predecessors, it has proceeded with the steady but unspectacular process of social change and economic diversification and development begun soon after the Chaco conflict.

Although in recent years a certain degree of social and economic progress has been made in Paraguay, its fundamental political problem, domination of the Army over political affairs, still remains. This is a heritage of Paraguay's history, and it still appears a long way from solution.

The nation was first colonized by Jesuit priests early in the Seventeenth Century. They presided over a unique theocratic experiment in which they Christianized, educated, and ruled the native Guaraní for one hundred fifty years, until their Order was thrown out of Spanish America by the king in the middle of the Eighteenth Century.

Paraguay achieved independence in 1811.

The War of the Triple Alliance from 1865 to 1870, which saw Paraguay fighting Argentina, Brazil, and Uruguay, resulted in the slaying of virtually all the country's adult males. Three generations were not enough for Paraguay to recover from this struggle.

The first three decades of the present century were a period of relative prosperity and civilian rule. However, in 1932 Paraguay entered another disastrous conflict, the Chaco War with Bolivia, which lasted for over three years, and the results of which are still being felt.

Although Paraguay "won" the Chaco War, it engendered among the enlisted men and junior officers a widespread desire for radical change. A revolution in February, 1936, led by Colonel Rafael Franco, proclaimed a "Socialist" regime for the country, and although the Franco government lasted only a year and a half, the economic and social changes it initiated, such as an agrarian reform and attempts to diversify the economy, still continue.

All Paraguayan presidents since 1940 have been nominally members of the Colorado Party, the nation's traditional conservative party. There have been sizable groups of members of the outlawed Liberal, Febrerista, and Communist parties in exile in neighboring countries, who have made several unsuccessful revolutionary attempts, including a month-long civil war in 1947.

Since the administration of President Chaves, a labor movement, closely associated with the Colorado Party, has been tolerated. However, it remains weak, because of the undeveloped state of the economy, and the dictatorial nature of the government.

The social reforms started by the Franco regime in 1936-37 have continued, with only slight interruptions. Several thousand small farmers have been given land under the agrarian reform program. More than two hundred thousand acres of additional land have been brought into cultivation, and with the help of the United States foreign aid program an agricultural experiment and extension service has been organized.

Social security legislation has been enacted, and in recent years collective bargaining has been extended. At the same time the country has experienced a moderate degree of industrialization, though it remains predominantly an agricultural and grazing nation.

In spite of this progress, the country's principal problem remains politico-military. Since the Chaco War, each president has owed his office to a military revolt. The

Army leaders, in conjunction since 1940 with the leaders of the Colorado Party, have ruled the country. Although the forms of a democratic, republican government have been maintained, its essence has been missing.

Peru

Peru is one of the countries in which, until very recently, the traditional economy and society has been most firmly entrenched, and in which military dictatorship was virtually endemic. However, since the election of Dr. Manuel Prado as President in June, 1956, the country has been undergoing an experiment in democracy which, if successful, presages the beginning of a fundamental transformation in the country's social structure. The supporters of President Prado, including the members of the majority party, the Apristas, tend to look upon his regime as a "caretaker" government, to pave the way for the 1961 election which the Apristas hope to win.

Economically, socially, and politically Peru is divided virtually into three nations. Along the coast the population is of mixed blood, part Indian, part white, and part Negro, with strong minorities of each of these races. Commercial agriculture flourishes there, and the oil industry is located in a desert region along the North Coast, while manufacturing predominates in Lima and its vicinity. In the valleys of the Andes, agriculture cultivated under semi-feudal forms of tenure predominates, although there are beginnings of manufacturing in some of the major towns, and a rich mining industry flourishes in the center of the country. Finally, on the Eastern side of the Andes, there is a forest area, much of which is inhabited by primitive Indians, but some of which provides appreciable amounts of rubber and other tropical products.

Politics has been dominated traditionally by an alliance of the rural and commercial aristocracy and the armed forces. The Indians, who make up more than half the population, play little part in political life and have fought a losing battle to keep their land, language, and customs. Most work as sharecroppers on holdings of large landowners, though increasing numbers have streamed into the cities in recent decades.

Since 1930 there has existed a political party which has challenged the status quo: the Aprista Party. It arose from a student movement for university reform and social change during the First World War. The student leaders were deported, but upon the fall of the dictatorship of President Leguia in 1930, they returned

and organized the Aprista Party. This group, urging incorporation of the Indian into civic and political life, was moderately nationalist and found its principal support among younger intellectuals and the urban working class.

Although the Apristas soon showed they were the country's majority party, the party was illegal most of the time until 1945. The ruling economic and social groups feared the revolutionary program of the party, and supported a series of dictatorships, most of them military, to keep it out of power. Forced to hold honest elections in the wake of World War II, President Manuel Prado finally legalized the Aprista Party, which promptly won a majority in the Senate, came near it in the Chamber of Deputies, and saw the candidate is supported, José Bustamante, win as President.

For three years Peru enjoyed democratic government, but in October, 1948, this ended with an Army coup and another military dictatorship, that of General Manuel Odría, who ruled until 1956. The oppressiveness of the Odría dictatorship, and general world developments, convinced an important segment of the economic aristocracy that the changes advocated by the Apristas were bound to come sooner or later, and that it would be better for them to come in a democratic manner through an Aprista regime, than violently, as had occurred in neighboring Bolivia. This group was led by former President Manuel Prado, who sought and received the support of the still illegal Aprista Party in elections which a split in the Army forced President Odría to call.

Prado won, with the support of the Apristas, and immediately fulfilled his campaign promise to legalize the party once again. Since 1956, Prado has been presiding over an uneasy regime which has guaranteed civil liberties, but has been beset with serious economic and social problems. The fate of his administration will test whether social change can come to Peru peacefully or democratically, or whether the country is likely to face a violent and perhaps bloody upheaval.

Uruguay

Uruguay, one of the consistently democratic nations of Latin America, has been developing an economic, social, and political crisis of first magnitude. No political leader has faced up to the implications of this crisis which may endanger the tradition of democratic government Uruguay has enjoyed for two generations.

A small country, with less than 3,000,000 people, Uruguay was until the depression

largely a grazing nation. It grew wool and meat for export, and with the income thus earned imported manufactured goods, grains, and other products.

The depression stimulated the growth of manufacturing, as did World War II. Unable to obtain from abroad the industrial goods they needed, the Uruguayans began to produce many of them themselves. These industries produced goods at high cost and the government resorted to high tariffs to protect them. The rise of industry in Montevideo led to its rapid growth until it now contains one-third of the country's population.

Another aspect of the growing crisis is the state of the social security system. Uruguay early led the hemisphere in this field. However, by the 1950's excessively early retirement ages and other exaggerated provisions of the social security system made it onerously costly. Meanwhile, government employment had expanded to the point that one-third of the inhabitants of Montevideo were government workers.

Economic and social difficulties of Uruguay have been complicated by political confusion and evasion of responsibility by party leaders. In 1947, the country adopted a collegiate executive, with a nine-member Executive Council in place of the president. Membership in the Council was divided between six of the majority party and three of the minority. There has been a great deal of discontent with this system.

Political opinion in Uruguay is roughly divided between the Colorado Party and the Nationalist Blanco Party. Generally speaking, the Colorados represent the Left, the Blancos the Right.

Since 1904 the country has been dominated by that part of the Colorado party loyal to José Batlle y Ordóñez, father of Uruguayan's advanced social and labor legislation and the man who started the country's tradition of political democracy. Batlle's own followers are now divided into two bitterly opposed groups. They are faced with as big a challenge in maintaining Uruguayan democracy as their great forebear had in establishing it.

Venezuela

Venezuela during 1958 was preoccupied with re-establishing democratic government, and with the prospect of an economic crisis. Its long tradition of military dictatorship made the first problem particularly difficult, while excessive dependence on petroleum exports, which normally provide 95% of the foreign exchange earned by the country's economy, complicated the second.

Virtually since independence, Venezuela has been governed by military dictators. One of the most notorious, Juan Vicente Gómez, governed for a quarter of a century, during which the oil boom began, and died in bed in December, 1935. For thirteen years thereafter, the country progressed towards political democracy. Between 1945 and 1948 the government was in the hands of the country's majority party, Acción Democrática. A beginning was made towards diversifying the economy and reducing the nation's dependence on oil.

In November, 1948, the Acción Democrática government was overthrown by an army coup d'état, whose chief author was Colonel Marcos Pérez Jiménez. In 1952 the military regime called elections which were relatively free, although Acción Democrática, by then illegal, was not allowed to participate. When election returns ran strongly against the regime, counting of ballots was suspended; Colonel Pérez Jiménez declared himself provisional president, and announced that he had "won" the election. Two months later Pérez Jiménez was declared "constitutional president."

The Pérez Jiménez dictatorship equalled any in Venezuelan history for brutality and corruption. The regime maintained a concentration camp in the torrid jungles of the Orinoco River Valley. Leaders of Acción Democrática were shot down in the streets of Caracas; there was no freedom of speech or press, and corruption was so extensive that *The New York Times* reported in January, 1958, that Pérez Jiménez personally pocketed \$230,000,000.

The Pérez Jiménez regime was a period of large income for Venezuela, owing to the oil boom which converted the nation into the world's largest exporter and second largest producer of petroleum.

Pérez Jiménez was overthrown on January 23, 1958, by a civilian uprising, marked by a general strike-lockout throughout the nation, denunciation of the government from the pulpit, and bloody riots in Caracas and other cities by civilians armed with stones and broken bottles.

The administration was placed in the hands of a five-man government junta, consisting of a representative of each of the branches of the armed forces, and two civilians chosen from among the principal leaders of the business community. This administration announced that its principal job was to call democratic elections.

The junta faced its first serious crisis at the time of the visit of United States Vice President Nixon to Venezuela in May, 1958. The severe rioting at that time showed that political tempers were run-

ning high, and that there was widespread resentment against the United States because of the support it had seemed to extend to the Pérez Jiménez dictatorship. Although the leaders of the three major Venezuelan parties strongly condemned the rioting, it brought to a head differences of opinion within the junta, and a few days after Mr. Nixon's visit, the original civilian members of the junta resigned and were replaced by other important businessmen.

The largest party is Acción Democrática, a left-of-center group, led by Rómulo Betancourt and established in 1941, which is socialistic and moderate nationalist in ideology. Its leaders include some of the country's outstanding intellectuals, and its particular strength is among the urban workers and the peasants.

The second party in importance is the Christian Social party, Copel. This group, established under the leadership of Dr. Rafael Caldera early in 1946, has close connections with the Catholic Church.

After January 23, 1958, a new political party was formed, Integración Republicana. This is led by business and professional people who participated in the final move to overthrow the dictatorship. It seems destined never to be a mass party, but may have considerable influence.

At the end of May, 1958, the junta established a Consultative Assembly, in which all the parties were represented. The purpose of the Assembly was to serve as an interim Congress until elections scheduled for the end of 1958.

All political parties have a stake in the success of the provisional government in meeting the nation's economic problems. An economic crisis might well frustrate the junta's efforts to hold elections to restore democratic civilian government.

The provisional government put into execution an emergency economic plan of public works designed to absorb most of the 100,000 unemployed left by the Pérez Jiménez regime. At the same time the government's Venezuelan Development Corporation began a program to bolster some of the weaker elements in the nation's economy, and to plan for a broader economy, less subject to the vagaries of the oil business. The corporation began extending loans to industries such as textiles which needed new equipment in order to improve efficiency and productivity.

CENTRAL AMERICA

THERE ARE six countries in what is generally called Central America, stretching from the southern border of Mexico to the northern frontier of Colombia. They

vary widely, but the northerly five countries are moving toward economic and ultimately political union through the Organization of Central American States established in the early 1950's.

Guatemala, El Salvador, Honduras, Nicaragua, and Costa Rica are the five countries participating in the Organization of Central American States. Agreements providing for coordinated development of industries in the various countries and accords have been reached for the gradual introduction of a customs union. Many predict that successful economic union may result in the re-establishment of the Republic of Central America, which existed for fifteen years after 1821 when Central America achieved its independence from Spain, but which foundered on the rivalries among the different sections of the peninsula.

Costa Rica

Costa Rica is the one Central American country with a long tradition of democracy. It is a country of predominantly small farmers producing coffee for export and food crops largely for local consumption. Since independence, the country has generally selected its chief executives by elections instead of coups d'état. Only twice in the present century have there been forceful overthrows of the government. The second time was in 1948 when the incumbent regime attempted to prevent its elected successor from taking office. This revolution was led by José Figueres, a well-to-do farmer and engineer.

The 1948 revolution opened a new phase of Costa Rican political and economic development. The revolutionary junta led by Figueres nationalized the banking system, enacted a capital levy, and presided over the writing of a new constitution.

In 1953 José Figueres was elected president. His constitutional government stepped up economic development and public housing. In March, 1958, President Figueres presided over new elections, in which the candidate of his Partido Liberación Nacional was defeated and Mario Echandi, a strong opponent of Figueres, was elected President of the Republic. He took office early in May.

El Salvador

Neighboring El Salvador is one of the most thickly populated countries of the Western Hemisphere. The principal occupation of its residents is growing some of the finest coffee produced in America. Most of the land is held by a few score

wealthy families, while workers who cultivate these landholdings are generally very poor. There are beginnings of manufacturing in San Salvador, the capital, and one or two other towns.

Since 1948 the country has been undergoing a moderate social revolution, under the leadership of young army officers and professional men. This has brought programs of irrigation and the settlement of small farmers on reclaimed land, construction of hydroelectric schemes, enactment of labor and social security legislation, the growth of a labor movement, and relative freedom of speech. As yet there are no well-defined political parties, although the government has maintained the Partido Unión Revolucionaria as its principal political vehicle. This was the group which successfully backed Colonel Osorio for president in elections in 1949 and Colonel José Lemus six years later.

Guatemala

Bordering on Mexico is Guatemala, where the majority of the population is Indian and lives as it has for four centuries. The Indians speak their own languages, worship pagan gods, and live on land owned by the descendants of their conquerors. The city population—the so-called “ladinos”—usually have the blood of both races.

Between 1944 and 1954 Guatemala experienced a profound revolutionary movement. The governments during that period sought to diversify the economy and end its excessive dependence on the export of coffee and bananas.

The revolutionary governments also brought significant social changes, encouraging the growth of the labor movement, establishing a labor code and a social security system and undertaking an agrarian reform. They governed more or less democratically.

The downfall of the Guatemalan revolution came from the failure of the revolutionaries to distinguish between their own nationalistic, socially oriented movement and communism, and the consequent ability of the Communists to seize the leadership of the revolution. As a result, the government of President Jacobo Arbenz was overthrown by an armed invasion by Colonel Carlos Castillo Armas who ruled from July, 1954, until he was assassinated three years later. After six months of confusion following Castillo Armas' murder, General Ydigoras Fuentes, reputedly an extreme conservative, was finally elected President early in 1958 and took office soon afterwards.

Honduras

Honduras is the most backward of the Central American countries. Its principal product is bananas, grown on the north coast by the United and Standard Fruit Companies. Most of its people are farmers or grazers, though Tegucigalpa, San Pedro Sula, and other cities and towns are becoming centers of light manufacturing. Much of the country is unconnected by railroads or highways and considerable parts of it are virtually uninhabited.

Until 1948 Honduras was governed by a strict military dictatorship, under General Tiburcio Carías Andino. A military junta presided over new elections for a constitutional assembly in 1957, which were won by the Liberal Party. The Liberal-controlled assembly elected the party's leader Ramon Villeda Morales as president of the republic as its final act. Thus Honduras had its first popularly elected government in many decades.

Nicaragua

Nicaragua has been under control of a military dictatorship since 1936. In that year, General Anastasio Somoza, commander of the National Guard, which had been organized during the United States occupation of the country during and after World War I, seized power. He or members of his family have been in power ever since. Their regime has ostensibly been a government of the Liberal Party, though in fact it has been a personal dictatorship.

Under the Somozas, the country has experienced considerable economic development. Its agriculture has been diversified, a network of roads has been constructed, manufacturing has begun to appear in several cities. One characteristic of all of this development has been that the Somoza family has participated in and benefited from virtually all of it.

In 1956 President Anastasio Somoza was assassinated, and his post was taken by his son, Luis, hitherto president of Congress. Another son, Anastasio Jr., was commander of the National Guard. Under Luis Somoza, the stringency of the dictatorship was relaxed and some advance towards the development of political democracy took place.

Panamá

Panamá is dominated by the Canal Zone, which runs through its center. The country achieved its independence from Colombia in 1903 with the help of the United States, anxious to build the canal. A treaty for the “big ditch” was soon signed and since then the economy of the country has centered on the canal.

WEST INDIES

Cuba

For twenty-five years Fulgencio Batista has dominated Cuban public life. Chief executive during ten years of this period, he has been the power behind the scenes during most of the rest of the time. Since 1952, he has ruled the island republic with a dictatorial regime which in the beginning was mild. However, in November, 1956, a group of anti-Batista rebels, led by a young lawyer, Fidel Castro, began an insurrection in the Sierra Maestra mountains at the eastern end of the island, and since that time Batista's rule has been increasingly harsh.

The mixed Negro and white population of Cuba received its independence in 1902 as a result of the Spanish-American War of 1898, and since then its political history has been an erratic one. During the last third of a century all but eight years have been spent under a dictatorship.

During much of this time the island's political history has been closely connected with ups and downs of its economy. Cuba has what is fundamentally a sugar economy. It is the world's largest exporter of sugar, though in recent years tourism has also become a major factor in its economy, and grazing, truck gardening, mining, and manufacturing have become increasingly important.

During World War I the sugar industry boomed. Subsequently the price and demand for sugar declined, bringing a political crisis. President Gerardo Machado, elected in 1924, established a dictatorship, the sordid reputation of which still survives. Machado was ousted by a general strike in September, 1933, and for three months the country was ruled by a nationalistic, socially-minded regime headed by Dr. Ramón Grau San Martín and backed by the army, now led by ex-sergeant Fulgencio Batista, who had helped to overthrow Machado.

In 1934, when Grau San Martín's government failed to gain recognition from the United States, Colonel Batista overthrew him and for the next ten years, Batista dominated the Cuban government. Until 1940 he made and unmade presidents at will, but in that year had himself elected president.

In 1944 President Batista presided over elections which were won by his worst enemy, Dr. Grau San Martín. Batista gained himself a niche in Cuban history when he allowed Grau to take office. During the next eight years the government was dominated by Grau San Martín's

Auténtico Party. Although these years were marked by extensive corruption, they were perhaps the most democratic period in Cuban history.

In June, 1952, a new election was scheduled. There were three candidates—Carlos Hevia of the Auténtico Party; Roberto Agramonte of the new Ortodoxo Party; and the now General Fulgencio Batista. The race was between Hevia and Agramonte, and Batista had no chance of winning, so, on March 10, Batista led a revolt with the help of sympathetic junior officers of the army.

Since March 10, 1952, Batista has dominated Cuba. He was elected president in 1954 in a poll in which he had no opposition. For the first four and a half years after March, 1952, the Batista dictatorship was a mild one. However, with the landing of rebels in Oriente Province late in 1956, the regime became more oppressive.

The opposition to Batista is sharply divided. The followers of both Ramón Grau San Martín and Carlos Prío Socarras maintain groups they call Partido Auténtico, though they are bitterly opposed to one another. The followers of Fidel Castro, head of the rebels of Oriente Province, maintain the "25th of July Movement," which is not on friendly terms with either Auténtico group.

Economically, Batista has been fortunate. Although the price of sugar fell off soon after Batista took power, it recovered in later years and the country prospered in spite of political discontent. However, neither Batista nor any of his predecessors had done much to diversify the nation's economy, which still remained dependent on the vagaries of the sugar market.

Dominican Republic

The Dominican Republic has probably the world's most absolute dictatorship. Since 1930 the country has been under the dominion of Rafael Leonidas Trujillo, who began political life as an officer in the National Guard established under occupation by the United States during and after World War I. Shortly after withdrawal of United States troops, Trujillo ousted the elected president and seized control. Since that time he has either been chief executive or has controlled the person who was.

Trujillo has evolved a unique type of personal dictatorship. He allows only one political party, the Partido Dominicano, of which he is the undisputed chief. The constitution has been rewritten so that when any elected government official resigns, the leader of the party to which that person belongs names his successor. Trujillo takes the precaution to obtain the

undated resignation of all people elected on the Partido Dominicano ticket, and he sends it in to the appropriate official whenever he sees fit.

Thus an essential element in the Trujillo system is rapid alternation in office among those dependent upon him. No one is allowed to dig himself in long enough to build up patronage and other perquisites of office which might conceivably make him a serious danger to the dictator. The results of this are sometimes ludicrous. Congressmen and other officials learn about their "resignations" by reading of them in the newspapers.

These devices are supplemented by complete control over the armed forces and by an exceedingly efficient secret police. This fearsome body works not only in the Dominican Republic itself but in other countries as well. Enemies of Trujillo have been murdered or have disappeared in Cuba, Mexico, Haiti, and the United States.

In 1956 the activities of Trujillo's secret police received particular attention when a Basque exile who formerly lived in the Dominican Republic, Dr. Jesus de Galindez, disappeared from the streets of New York under mysterious conditions. Several months later an American pilot employed by the Dominican Airlines mysteriously disappeared in the Dominican Republic and students of the case linked his disappearance with that of Galindez. *Life* magazine, among others, asserted that Gerald Murphy, the American pilot, had flown Galindez, kidnaped by Trujillo agents, from New York to the Dominican Republic, and had himself been eliminated when he began to talk too much about the incident.

There has been no freedom of press or speech under Trujillo, and there have been no opposition political parties allowed. The only exception to this latter statement was in 1946-47 when Trujillo desired to give an appearance of "democracy" in having himself re-elected. For a short while he allowed the Communists, under the name Partido Socialista Popular, to function openly. However, before the election was actually held, Trujillo sent most of his Communist friends into exile.

Nepotism has reigned under Trujillo. In 1952 he made his brother, Hector, president of the republic. His elder son was a general before he was of school age. Horse races at the National Stadium in which a Trujillo horse is entered must be won by that horse or the Stadium authorities and owners of other steeds will suffer.

Trujillo has sought to get rid of leaders of neighboring countries who were not to his liking. During 1957, the Costa Rican

authorities arrested two gunmen who admitted having been sent by the Dominican regime to assassinate President José Figueres.

Perhaps the only positive aspect of the Trujillo regime has been its economic policy. The Dominican Republic has been traditionally a sugar-exporting country. Trujillo has diversified the economy, encouraging other types of agriculture as well as grazing, stimulating moderate industrialization, and favoring the tourist trade. He has considerably extended means of transportation and communication.

It is generally believed that Trujillo is a silent partner in virtually every economic enterprise of any size in the country. No business can function without his approval and support.

Haiti

Haiti in recent years has continued its traditional pattern of alternating periods of dictatorship with shorter periods of chaos. The election of the present chief executive, President Francois Duvalier, late in 1957 put an end to one of the periods of chaos and inaugurated a new dictatorship, civilian in appearance but in fact resting upon the bayonets of the armed forces.

Haiti occupies the western third of the island of Hispaniola and is a unique country in many ways. It was the first Latin American nation to win its independence, as the result of a slave revolt in 1804. It is the one virtually all-Negro nation of the hemisphere. It is a country of small farmers, most of whom own and cultivate mere patches of land. It has the highest illiteracy rate, the deepest poverty, and one of the most meager endowments of natural resources of all the countries of the hemisphere. Yet its people have a dignity, pride, and feeling of self-assurance which is unusual in Latin America.

The country started its struggle for independence under Toussaint L'Ouverture at the time of the French Revolution in the 1790's. Although this first attempt was suppressed by Napoleon Bonaparte, a successful uprising led by Jean Jacques Dessalines in 1804 finally established Haiti as an independent nation.

The political turbulence, which in the first two decades of the present century brought occupation of the republic by United States Marines, had little real influence on the daily lives of the people. Small farmers, they continued to grow their infinitesimal amounts of coffee and corn, which the womenfolk brought to the local market on their heads. Close to the spirit of their African ancestors, they per-

severed in speaking their own peculiar language—a mixture of African dialects, French, Spanish, and English—and to worship their pagan gods, only slightly influenced by the teachings of the Catholic Church.

In December, 1945, a revolution put President Dumarsais Estimé in power. His regime was one of the few democratic episodes the country has experienced. There was freedom of press and speech, several political parties were organized, a labor movement was established, and a serious attempt was made to plan for the country's economic development. Rudimentary labor legislation was enacted and the foundations of a social security system were laid.

However, President Estimé's attempt to perpetuate himself in power after his term had expired in December, 1949, brought another revolution, the victor of which was General Paul Magloire, who ruled until December, 1956. His regime, a dictatorship, continued many of the social and economic policies of its predecessor. President Magloire, in turn, attempted to stay in office after his term had ended and was overthrown. From December, 1956, until September, 1957, when President Duvalier was installed, there was a period of chaos.

The outstanding figure during this period was Provisional President Daniel Fignolé, idol of the masses of Port-au-Prince, who during the Estimé period had organized a political party. When he was overthrown in 1957, he sought refuge in New York City, from whence he continued to direct the activities of his followers.

The overthrow of Fignolé by the army paved the way for the election of President Duvalier. His regime has attempted to restore some semblance of order to the nation's finances, but it depends upon the armed forces for its tenure in office. Stability and systematic growth have not yet come to Haiti's politics and economy.

Colonial West Indies

MANY of the islands in the West Indies and several areas on the adjacent mainland are still non-self-governing territories, under the sovereignty of three European powers and the United States. All of these areas have made considerable progress in the direction of self-government in recent years. Most of them have similar economic problems, as underdeveloped areas taking their first steps towards industrialization and diversification.

During the seventeenth and eighteenth centuries the various islands of the Carib-

bean and some of the mainland regions near them changed hands frequently among the European powers. Great Britain, France, Spain, the Netherlands, and even Sweden and Denmark participated in the struggle to control this valuable area lying athwart the Spanish Main. Most of the islands produced sugar, spices, or some other product much in demand in Europe, and cultivation of these commodities was the occasion for bringing in hundreds of thousands of Negro slaves from Africa, whose descendants make up most of the population of the region today.

During the first half of the nineteenth century slavery was abolished, the ex-slaves tended to wander off the plantations, and the region's brisk trade with Europe declined. Although some of the colonies—notably Trinidad, British Guiana, and Surinam—brought indentured servants from India and Indonesia to take the place of the emancipated slaves, most of the colonies' economies suffered a drastic decline, and by 1928 President Herbert Hoover quite rightly referred to the West Indian area as "America's poorhouse."

Suddenly in 1937 and 1938 the whole region seemed to awaken from a deep sleep, politically speaking, and there was an outbreak of revolt in the British colonies, followed soon afterwards by similar movements in the Dutch and United States dependencies.

Today the parts of the West Indies which are not independent fly the flags of four different countries—Great Britain, France, the Netherlands, and the United States. Each of these has had a somewhat different development since the late 1930's, but the trend in each case is similar.

British Areas

British holdings are most extensive. The upsurge of the late 1930's brought into existence in virtually all the British islands as well as in Great Britain's two mainland colonies, British Guiana and British Honduras, both trade union movements and political parties—usually with very close connections. The first leaders of these movements tended to be people of a demagogic stripe, of no particular ideological bent, who were capable of expressing the immediate grievances of the people of their colony.

Subsequently there arose a group of leaders and parties headed by people of greater intellectual distinction and more defined ideology, most of them socialists, and the original leaders have tended to become the conservative political force within their respective areas.

Two parties which have arisen in the British area are exceptions to these cate-

gories. One of these, the People's United Party of British Honduras, is a Catholic Social group, receiving advice from local Jesuit priests. Its hold on the colony's electorate has been demonstrated in two successive elections in the 1950's. The other party is the pro-Communist Peoples Progressive Party of British Guiana, led by Dr. Cheddi Jagan. It won control of the colonial government in June, 1953, only to be deposed by the governor four months later when he thought the PPP government had overstepped constitutional bounds. However, late in 1957, when constitutional government was restored, the PPP won again.

During the 1940's and early 1950's all of the British territories received a considerable degree of self-government, Trinidad, Barbados, and Jamaica being brought to the edge of independence. At the same time, negotiations among the territories and between them and Great Britain brought most of the colonies into a new West Indies Federation, to which Britain was committed to grant full independence. Only British Guiana and British Honduras, which did not desire to become part of the Federation, and the Bahamas, which still had a government of colonial aristocrats who did not want to associate their colony with its neighbors, controlled by darker-skinned people, stayed outside of the new nation-in-embryo.

All the new popularly-elected governments in the British colonies moved to develop their economies. Development corporations were established, diversification of agriculture was encouraged, and manufacturing industries were stimulated. However, the economy of the whole region continued to be dependent principally on the export of a narrow range of raw materials or foodstuffs.

Dutch

The Dutch colonial areas in America have also developed towards self-government and a more diversified economy. The first steps in the direction of the former were taken during the Second World War when the islands of Dutch West Indies and the mainland colony of Surinam, along with the Netherlands and Dutch East Indies, were declared equal partners in the Dutch Empire. Subsequently, both the Dutch West Indies and Surinam have been given virtually complete internal self-government. In both areas, the popularly elected governments have stimulated economic development.

French

The French colonial areas in the Caribbean area have developed in a different

direction. The islands of Martinique and Guadeloupe and the mainland colony of French Guiana (once the home of Devil's Island) are regarded as integral parts of France and as such have representation in the French National Assembly. They also enjoy a considerable degree of internal self-government.

U. S.: Puerto Rico—Virgin Islands

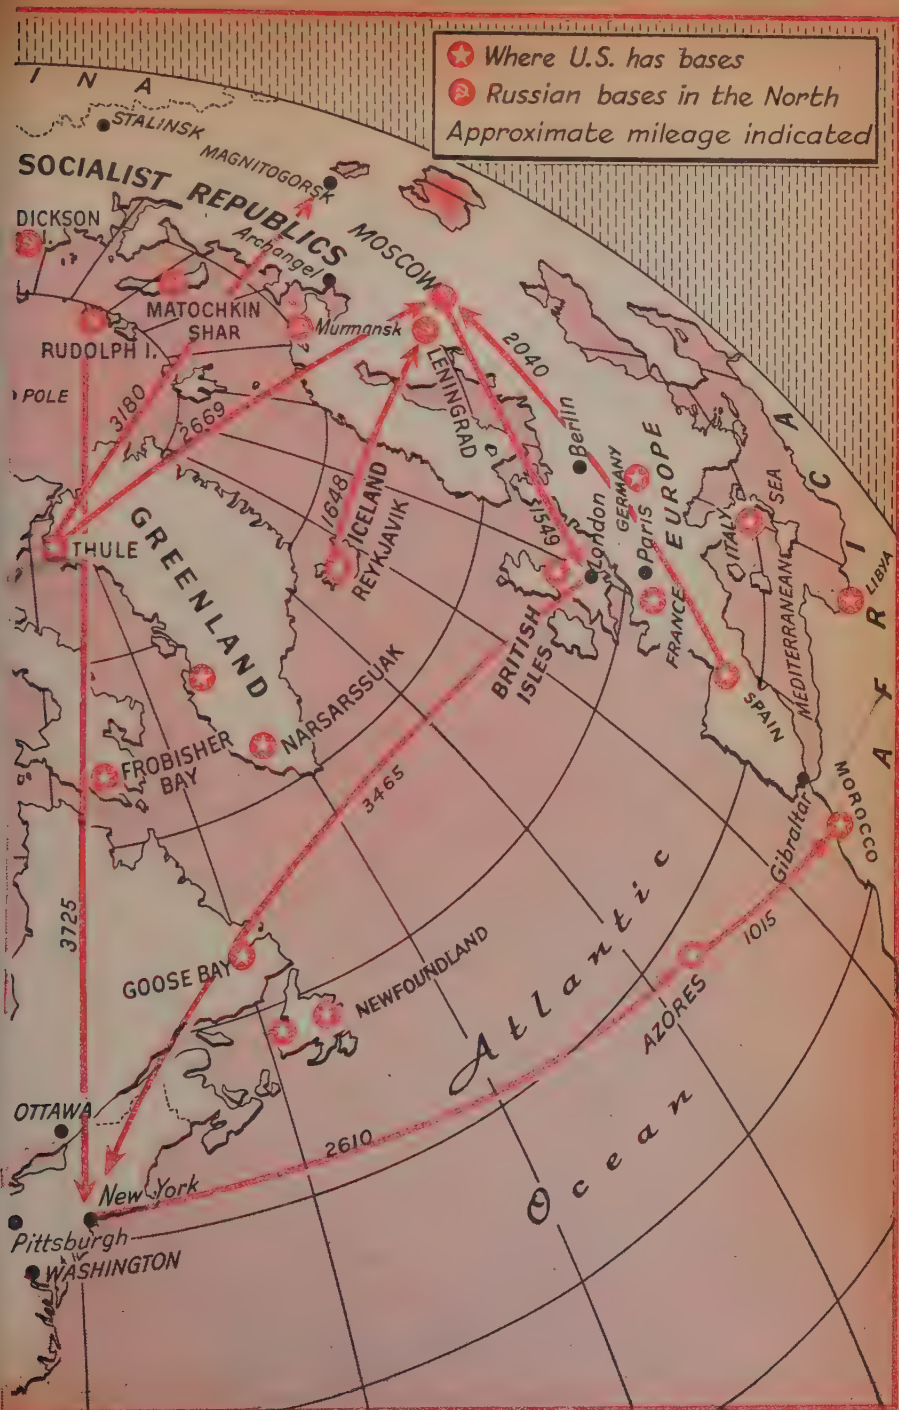

The principal United States dependencies in the West Indies are Puerto Rico, acquired as a result of the Spanish-American War of 1898, and the Virgin Islands, bought from Denmark in 1917. They have both experienced a great deal of progress during the last quarter of a century.

Puerto Rico was very poor, almost completely dependent on the export of sugar, and enjoyed only limited self-government in 1940. In the election of that year, Luiz Muñoz Marín's new Popular Democratic Party won control of the local legislature. It started a program of economic development which in the last eighteen years has established an island-wide electric power network; has greatly diversified agriculture, reducing the area devoted to sugar production, while increasing total output—the land thus saved being devoted to pineapples, fruits, grazing, and other types of production. At the same time, "operation bootstrap" has brought more than 400 new manufacturing establishments to the island.

While stimulating economic development, the Popular Democrats have also evolved a new relationship with the mainland. In 1947 they convinced Congress to allow the election of the governor by the people of the island, and Muñoz Marín became the first elected governor the following year. Four years later, Congress allowed the island to write its own constitution, which laid down the lines of a Commonwealth "freely associated" with the United States. It has almost complete internal self-government. Presidents Truman and Eisenhower have said that the moment the Puerto Ricans decide they want independence they can have it.

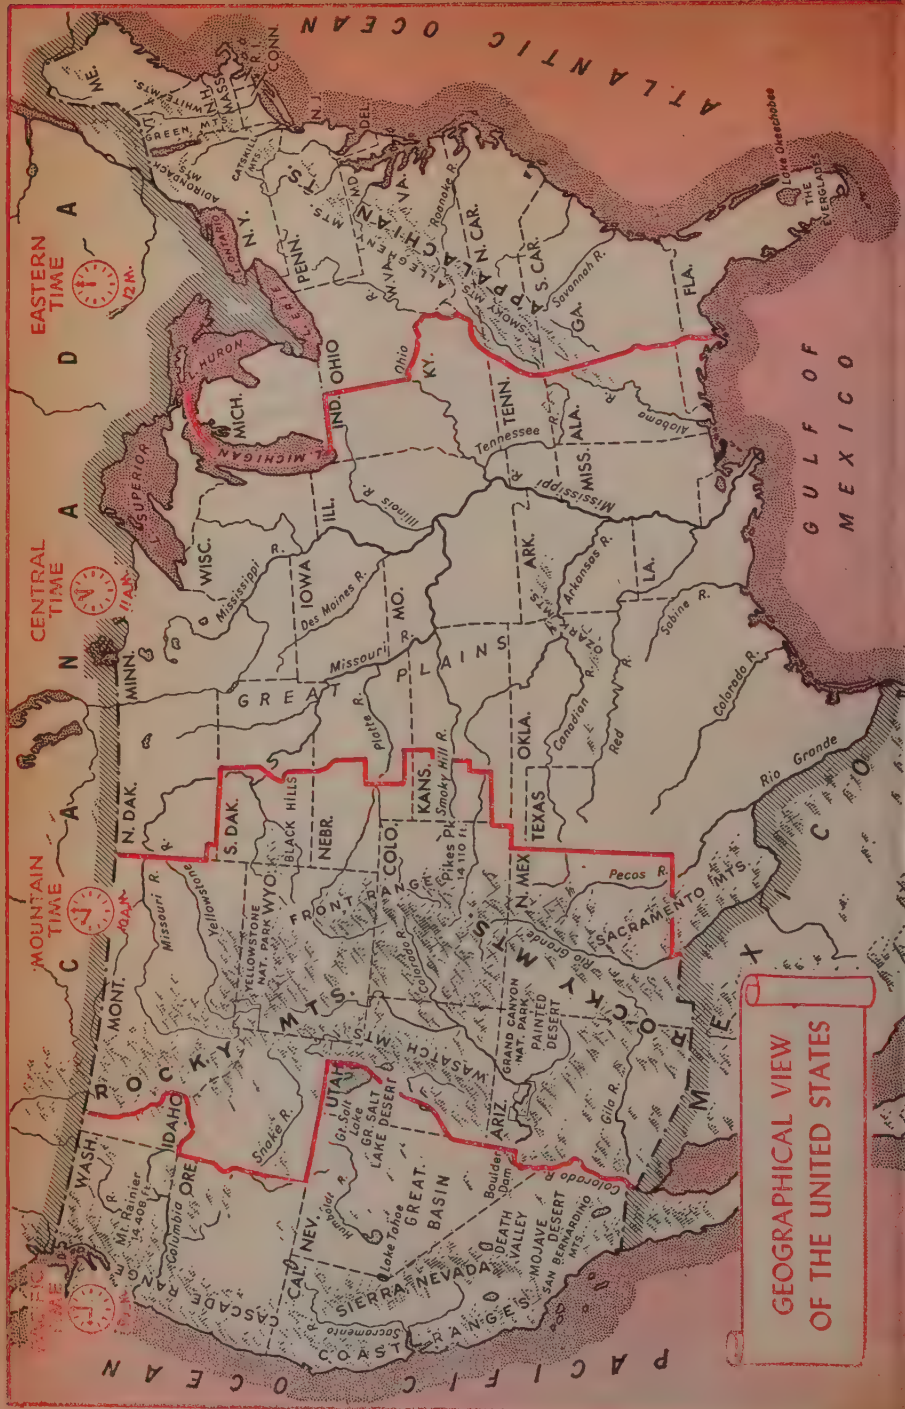

The American Virgin Islands have also made some progress towards a sounder economy and a greater degree of self-rule. During the New Deal, new industries under government ownership or encouragement were established. Since World War II there has been a considerable expansion in tourist trade. The islands have an elected legislature, though the governor and some other important officials are still appointed from Washington. In recent years there has been some agitation among the Virgin Islanders for a status similar to that of Puerto Rico.

The Cairo Conference

Important provisions of the Conference, which was held Nov. 22-26, 1943:

The several military missions have agreed upon future military operations against Japan. The Three Great Allies expressed their resolve to bring unrelenting pressure against their brutal enemies by sea, land, and air. This pressure is already rising.

The Three Great Allies are fighting this war to restrain and punish the aggression of Japan. They covet no gain for themselves and have no thought of territorial expansion. It is their purpose that Japan shall be stripped of all the islands in the Pacific which she has seized or occupied since the beginning of the first World War

in 1914, and that all the territories Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China. Japan will also be expelled from all other territories which she has taken by violence and greed. The aforesaid Three Great Powers, mindful of the enslavement of the people of Korea, are determined that in due course Korea shall become free and independent.

With these objectives in view the three Allies, in harmony with those of the United Nations at war with Japan, will continue to persevere in the serious and prolonged operations necessary to procure the unconditional surrender of Japan.

The Teheran Conference

(Nov. 28-Dec. 1, 1943)

The President of the United States of America, the Premier of the Union of Soviet Socialist Republics, and the Prime Minister of the United Kingdom, have consulted with each other and with the Prime Minister of Iran, desire to declare the mutual agreement of their three Governments regarding relations with Iran.

The Governments of the United States of America, the Union of Soviet Socialist Republics and the United Kingdom recognize the assistance which Iran has given in the prosecution of the war against the common enemy, particularly by facilitating transportation of supplies from overseas to the Soviet Union. The three Governments realize that the war has caused special economic difficulties for Iran and they are agreed that they will continue to make available to the Government of Iran such economic assistance as may be possible, having regard to the heavy demands made upon them by their worldwide military operations and to the worldwide shortage of transport, raw materials and supplies for civilian consumption.

With respect to the post-war period, the Governments of the United States of America, the Union of Soviet Socialist Republics and the United Kingdom are in accord with the Government of Iran that any economic problem confronting Iran at the close of hostilities should receive full consideration along with those of the other members of the United Nations by conferences or international agencies held or created to deal with international economic matters.

The Governments of the United States of America, the Union of Soviet Socialist Republics and the United Kingdom are at one with the Government of Iran in their desire for the maintenance of the independence, sovereignty and territorial integrity of Iran. They count upon the participation of Iran together with all other peace-loving nations in the establishment of international peace, security and prosperity after the war in accordance with the principles of the Atlantic Charter, to which all four governments have continued to subscribe.

The Yalta Conference

Important provisions of the Conference, which was held Feb. 4-11, 1945:

The Occupation and Control of Germany

We have agreed on common policies and plans for enforcing the unconditional surrender terms which we shall impose together on Nazi Germany after German armed resistance has been finally crushed. These terms will not be made known until the final defeat of Germany has been accomplished. Under the agreed plan, the forces of the three powers will each occupy a separate zone of Germany. Coordinated administration and control has been provided for under the plan through a central Control Commission, consisting of

the supreme commanders of the three powers, with headquarters in Berlin. It has been agreed that France should be invited by the three powers, if she should so desire, to take over a zone of occupation, and to participate as a fourth member of the Control Commission. The limits of the French zone will be agreed upon by the four Governments concerned through their representatives on the European Advisory Commission.

It is our inflexible purpose to destroy German militarism and nazism and to ensure that Germany will never again be able to disturb the peace of the world. We are determined to disarm and disband all

German armed forces; break up for all time the German General Staff that has repeatedly contrived the resurgence of German militarism; remove or destroy all German military equipment; eliminate or control all German industry that could be used for military production; bring all war criminals to just and swift punishment and exact reparation in kind for the destruction wrought by the Germans; wipe out the Nazi Party, Nazi laws, organizations, and institutions, remove all Nazi and militarist influences from public office and from the cultural and economic life of the German people; and take in harmony such other measures in Germany as may be necessary to the future peace and safety of the world. It is not our purpose to destroy the people of Germany, but only when nazism and militarism have been extirpated will there be hope for a decent life for Germans, and a place for them in the comity of nations.

Terms Under Which Russia Entered the War Against Japan

The leaders of the Three Great Powers—the Soviet Union, the United States of America and Great Britain—have agreed that in two or three months after Germany has surrendered and the war in Europe has terminated the Soviet Union shall enter into the war against Japan on the side of the Allies on condition that:

1. The status quo in Outer Mongolia (The Mongolian People's Republic) shall be preserved;
2. The former rights of Russia violated by the treacherous attack of Japan in 1904 shall be restored, viz.:

The Potsdam Declaration

Text of the declaration issued at Potsdam, Germany, July 26, 1945, outlining the terms under which Japan would be allowed to surrender:

1. We, the President of the United States, the President of the national government of the Republic of China and the Prime Minister of Great Britain, representing the hundreds of millions of our countrymen, have conferred and agreed that Japan shall be given the opportunity to end this war.
2. The prodigious land, sea, and air forces of the United States, the British Empire and China, many times reinforced by their armies and air fleets from the west, are poised to strike the final blow at Japan. This military power is sustained and inspired by the determination of all allied nations to prosecute the war against Japan until she ceases to resist.
3. The result of the futile and senseless German resistance to the might of the aroused free peoples of the world stands forth in awful clarity as an example to the people of Japan.

(a) the southern part of Sakhalin as well as all the islands adjacent to it shall be returned to the Soviet Union,

(b) the commercial port of Dairen shall be internationalized, the preeminent interests of the Soviet Union in this port being safeguarded and the lease of Port Arthur as a naval base of the U.S.S.R. restored,

(c) the Chinese-Eastern Railroad and the South-Manchurian Railroad which provides an outlet to Dairen shall be jointly operated by the establishment of a joint Soviet-Chinese Company, it being understood that the preeminent interests of the Soviet Union shall be safeguarded and that China shall retain full sovereignty in Manchuria;

3. The Kurile Islands shall be handed over to the Soviet Union.

It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures in order to obtain this concurrence on advice from Marshal Stalin.

The Heads of the Three Great Powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan has been defeated.

For its part the Soviet Union expresses its readiness to conclude with the National Government of China a pact of friendship and alliance between the U.S.S.R. and China in order to render assistance to China with its armed forces for the purpose of liberating China from the Japanese yoke.

The might that now converges on Japan is immeasurably greater than that which, when applied to the resisting Nazis, necessarily laid waste to the land, the industry, and the method of life of the whole German people.

The full application of our military power, backed by our resolve, will mean the inevitable and complete destruction of the Japanese armed forces and just as inevitably the utter devastation of the Japanese homeland.

4. The time has come for Japan to decide whether she will continue to be controlled by these self-willed militaristic advisers whose unintelligent calculations have brought the empire of Japan to the threshold of annihilation, or whether she will follow the path of reason.

5. The following are our terms: we will not deviate from them; there are no alternatives; we shall brook no delay.

6. There must be eliminated for all time the authority and influence of those

who have deceived and misled the people of Japan into embarking on world conquest, for we insist that a new order of peace, security, and justice will be impossible until irresponsible militarism is driven from the world.

7. Until such a new order is established and until there is convincing proof that Japan's war-making power is destroyed, points in Japanese territory to be designated by the Allies shall be occupied to secure the achievement of the basic objectives we are here setting forth.

8. The terms of the Cairo declaration shall be carried out and Japanese sovereignty shall be limited to the Islands of Honshu, Hokkaido, Kyushu, Shikoku and such minor islands as we determine.

9. Japanese military forces after being completely disarmed shall be permitted to return to their homes with the opportunity to lead peaceful and productive lives.

10. We do not intend that the Japanese shall be enslaved as a race or destroyed as a nation, but stern justice shall be meted out to all war criminals, including those who have visited cruelties upon our prisoners.

The Japanese government shall remove all obstacles to the revival and strength-

ening of democratic tendencies among the Japanese people. Freedom of speech and religion and of thought, as well as respect for the fundamental human rights, shall be established.

11. Japan shall be permitted to maintain such industries as will sustain her economy and permit the payment of just reparation in kind, but not those industries which will enable her to rearm for war.

To this end, access to, as distinguished from control of, raw materials shall be permitted. Eventual Japanese participation in world trade relations shall be permitted.

12. The occupying forces of the Allies shall be withdrawn from Japan as soon as these objectives have been accomplished and there has been established in accordance with the freely expressed will of the Japanese people a peacefully inclined and responsible government.

13. We call upon the government of Japan to proclaim now the unconditional surrender of all Japanese armed forces, and to provide proper and adequate assurances of their good faith in such action. The alternative for Japan is prompt and utter destruction.

North Atlantic Treaty

Signed at Washington, D.C., April 4, 1949

The Parties to this Treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law.

They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defense and for the preservation of peace and security.

They therefore agree to this North Atlantic Treaty:

Article 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security, and justice, are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

Article 2

The Parties will contribute toward the further development of peaceful and friendly international relations by strength-

ening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

Article 3

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

Article 4

The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

Article 5

The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the Party or Parties so attacked by taking forthwith,

individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Article 6

For the purpose of Article 5 an armed attack on one or more of the Parties is deemed to include an armed attack on the territory of any of the Parties in Europe or North America, on the Algerian departments of France, on the occupation forces of any Party in Europe, on the islands under the jurisdiction of any Party in the North Atlantic area north of the Tropic of Cancer or on the vessels or aircraft in this area of any of the Parties.

Article 7

This Treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the Parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security.

Article 8

Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third state is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

Article 9

The Parties hereby establish a council, on which each of them shall be represented, to consider matters concerning the implementation of this Treaty. The council shall be so organized as to be able to meet promptly at any time. The council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee which shall recommend measures for the implementation of Articles 3 and 5.

Article 10

The Parties may, by unanimous agreement, invite any other European state in a position to further the principles of this

Treaty and to contribute to the security of the North Atlantic area to accede to this Treaty. Any state so invited may become a party to the Treaty by depositing its instrument of accession with the Government of the United States of America. The Government of the United States of America will inform each of the Parties of the deposit of each such instrument of accession.

Article 11

This Treaty shall be ratified and its provisions carried out by the Parties in accordance with their respective constitutional processes. The instruments of ratification shall be deposited as soon as possible with the Government of the United States of America, which will notify all the other signatories of each deposit. The Treaty shall enter into force between the states which have ratified it as soon as the ratifications of the majority of the signatories, including the ratifications of Belgium, Canada, France, Luxembourg, the Netherlands, the United Kingdom and the United States, have been deposited and shall come into effect with respect to other states on the date of the deposit of their ratifications.

Article 12

After the Treaty has been in force for ten years, or at any time thereafter, the Parties shall, if any of them so requests, consult together for the purpose of reviewing the Treaty, having regard for the factors then affecting peace and security in the North Atlantic area, including the development of universal as well as regional arrangements under the Charter of the United Nations for the maintenance of international peace and security.

Article 13

After the Treaty has been in force for twenty years, any Party may cease to be a party one year after its notice of denunciation has been given to the Government of the United States of America, which will inform the Governments of the other Parties of the deposit of each notice of denunciation.

Article 14

This Treaty, of which the English and French texts are equally authentic, shall be deposited in the archives of the Government of the United States of America. Duly certified copies thereof will be transmitted by that Government to the Governments of the other signatories.

Tripartite Security Treaty

(United States, Australia, New Zealand)

Major provisions of the Tripartite agreement signed on Sept. 1, 1951, at San Francisco:

1. The parties undertake to settle by peaceful means any international disputes in which they may be involved.

2. The parties will maintain and develop their individual and collective capacity to resist armed attack.

3. The parties will consult together whenever the territorial integrity, political

independence or security of any of the parties is threatened in the Pacific.

4. Each party recognizes that an armed attack in the Pacific area on either of the other parties would be dangerous to its own peace and safety.

5. The parties hereby establish a council, consisting of their foreign ministers or their deputies, to consider matters concerning the implementation of this treaty.

6. This treaty shall remain in force indefinitely.

A Defense Treaty similar in its provisions to the Tripartite Security Treaty was signed by the United States and the Philippines in Washington, D. C., Aug 30, 1951.

United States-Japanese Treaty

Main provisions of the U. S.-Japanese Security Treaty signed at San Francisco on Sept. 8, 1951:

1. Japan grants and the U. S. accepts the right to dispose U. S. land, air and sea forces in and about Japan. Such forces may be utilized to contribute to the maintenance of international peace and security in the Far East and to the security of Japan against armed attack from without, including assistance given at the express request of the Japanese government to put down large scale riots and disturbances in Japan caused through instigation or intervention by an outside power or powers.

2. Japan will not grant without the prior consent of the U. S. any bases or any rights, powers or authority whatsoever relating to bases, or the right of garrison or maneuver or transit of ground, air or naval forces of any third power.

3. This treaty shall expire whenever in the opinion of the governments of the U. S. and of Japan, U. N. arrangements or alternate individual or collective dispositions satisfactorily provide for the maintenance of international peace and security in the Japan area.

Japanese Peace Treaty

The Japanese Peace Treaty was signed at San Francisco on September 8, 1951, by 49 nations; the U.S.S.R., Poland and Czechoslovakia were present but refused to sign. Among the major provisions of the treaty are the following:

Peace: The state of war between Japan and the Allies is terminated.

Sovereignty: Japan's full sovereignty is recognized as is its right to apply for U. N. membership.

Territory: Japan recognizes the independence of Korea; renounces all rights, titles or claims to Formosa, the Pescadores, the Kuriles, Sakhalin, the Pacific islands formerly under mandate to Japan, the Antarctic area, Spratly Island and the Paracels.

Japan agrees to U. N. trusteeship over the Ryukyu and Daito Islands, the Bonins, Rosario Island, the Volcano Islands, Parece Vela and Marcus Island. Disposition of Japanese property on these islands is to be negotiated by Japan and the administering authorities.

Security: Japan agrees to settle its international disputes peaceably, to refrain from the threat of or the use of force and to abide by the principles of the U. N.

All occupation forces are to be withdrawn as soon as possible but not later than 90 days after a majority of the sig-

natory countries have given notice of ratification of this treaty. Nothing in this provision shall, however, prevent the stationing or retention of foreign armed forces in Japanese territory by agreement with one or more of the Allies.

Political-Economic Clauses: Japan may enter into fisheries treaties; may negotiate most-favored-nation trade and maritime treaties with the Allies; renounces all special rights and interests in China.

Japan accepts the judgments of the International Military Tribunal and Allied War Crimes Courts.

Claims and Property: Japan recognizes its responsibility to pay reparations but the Allies recognize its limited economic capacity; therefore, Japan shall pay through goods to be manufactured in Japan from raw materials provided by the victimized nations and by services. The Allies may retain certain properties seized from Japan but require the latter to return their properties within 6 months. Japan recognizes Allied industrial, literary and artistic property rights. It agrees to indemnify prisoners of war who suffered unduly but renounces similar claims against the Allies.

Settlement of Disputes: Any disagreements arising out of the interpretation of this treaty and not otherwise settled shall be submitted to the International Court of Justice.

(For treaties not listed here, see index.)

URANIUM

World production data are

generally unavailable, but U. S. output of uranium oxide was estimated at 10,000 tons in 1957 as compared with 6,000 tons in 1956. A member of the AEC estimated the known world reserves of uranium concentrates at 25,000,000 tons in Dec. 1957. (In the U. S., an average of 5 lb. of uranium oxide is extracted from each ton of ore.) U. S. reserves of high-grade uranium were estimated at 200,000 tons in 1957; of lower grade, about 6,000,000 tons. The world's most important deposits of uranium are believed to be in the Belgian Congo; also in the Northwest Territories and elsewhere in Canada; and in the Colorado plateau area of Colorado, New Mexico, Arizona and Utah; and in Alaska, in the United States. Deposits have also been found or reported in Australia, Bolivia, Brazil, Bulgaria, Burma, Ceylon,

Chile, China (in Manchuria), Czechoslovakia, England, Ethiopia, Finland, France, Germany, Greece, Greenland, Hungary, India, Indonesia, Iran, Japan, Madagascar, Mexico, Mozambique, Nigeria, Norway, Panamá, Philippines, Portugal, Rumania, Sardinia, South Africa, Spain, Sweden, Switzerland, the U.S.S.R. and Yugoslavia.

ZINC (thousands of metric tons, smelter, 1957)

1. United States ...	979.8 ¹
2. U.S.S.R.	351.0 ²

12. Poland	1,763

¹ Not including Northern Ireland. ² Not including Saar.

EMPLOYMENT INDEX (non-agricultural, 1957; 1953 = 100)¹

1. Yugoslavia	130
2. Japan	130
3. West Germany	122 ²
4. Austria	117
5. Poland	116 ³
6. Luxemburg	112 ⁴
7. Canada	112
8. New Zealand	110 ⁵
9. Australia	109
10. Hawaii	109

¹ Data on U.S.S.R. and satellites not available. ² Not including Saar. ³ Including agriculture. ⁴ Incomplete coverage. ⁵ 10 months average.

EXPORT INDEX (1957; 1953 = 100)¹

1. Japan	232
2. Yugoslavia	212 ²
3. West Germany	188
4. Austria	185
5. Mexico	170 ²
6. Italy	156
7. Chile	153
8. Philippines	149 ³
9. Sweden	138
10. Netherlands	137

¹ Volume of exports after eliminating price change effects; principal nations only, not including U.S.S.R. and satellites. ² Effects of price changes not eliminated. ³ 11 months average.

INDUSTRIAL PRODUCTION INDEX (1957; 1953 = 100)

1. Yugoslavia	170
2. Japan	161
3. U.S.S.R.	155
4. West Germany	147 ¹
5. Austria	146
6. France	145 ¹
7. Greece	145 ²
8. China, Taiwan	142
9. Czechoslovakia	139
10. Italy	138
11. Finland	131
12. Mexico	130

¹ Excluding construction. ² Not including mining and gas manufacture.

MERCHANT FLEETS (millions of gross tons, 1957)¹

1. United States	23.5 ²
2. British Commonwealth	20.4
3. Liberia	8.4 ³
4. Norway	8.1
5. Italy	4.3
6. Panamá	4.1 ³
7. Japan	4.1
8. Netherlands	3.9
9. France	3.8
10. West Germany	3.1
11. Sweden	2.9 ⁴
12. U.S.S.R.	2.6 ⁴

¹ Ships of 1,000 gross tons or more. ² Not including Great Lakes shipping; including 12,847,000 tons in reserve. ³ Mostly vessels of other nations, flying under "flag of convenience," practically tax-free. ⁴ 1956.

MOTOR VEHICLES (production in thousands, 1957)¹

1. United States	7,213 ²
2. West Germany	1,212
3. United Kingdom	1,149
4. France	928
5. U.S.S.R.	486
6. Canada	411
7. Italy	352
8. Japan	182
9. Australia	150 ³
10. Sweden	57 ³

¹ Passenger car production greatly

exceeds commercial vehicle production in all nations listed except U.S.S.R. (114,000 passenger cars, 372,000 other) and Japan (47,000 and 155,000). ² Factory sales. ³ 1956.

RAILWAYS (millions of metric freight-tons carried, monthly average, 1957)

1. United States	193.8
2. U.S.S.R.	114.3 ²
3. West Germany	25.3
4. United Kingdom	23.2 ³
5. Poland	20.7
6. East Germany	18.4
7. France	18.1
8. Canada	14.3 ²
9. Japan	14.2 ⁴
10. Czechoslovakia	13.3

¹ Class I railways only. ² 1956. ³ Not including Northern Ireland. ⁴ State railways; year ending March 31, 1958.

RETAIL TRADE INDEX (1957; 1953 = 100)¹

1. Japan	171 ²
2. Argentina	170
3. France	164 ³
4. Mexico	161 ⁴
5. Yugoslavia	160
6. Austria	146
7. Poland	143
8. West Germany	141
9. Australia	136 ⁵
10. Netherlands	136

¹ Internal commerce, principal nations only; data on U.S.S.R. unavailable. ² Department stores only. ³ Mainly grocery stores. ⁴ 11 months. ⁵ Year ending June 30, 1957.

STEEL, CRUDE (millions of metric tons, 1957)

1. United States	102.3
2. U.S.S.R.	51.0
3. West Germany	27.9 ¹
4. United Kingdom	22.1
5. France	14.1
6. Japan	12.6
7. Italy	6.8
8. Belgium	6.3
9. Poland	5.3
10. Czechoslovakia	4.8 ²
11. Canada	4.6
12. China	4.5 ²
13. Australia	2.4 ²

¹ Including Saar. ² 1956.

TELEPHONES (number per 100 population, 1957)

1. United States	35.5
2. Sweden	31.5
3. Canada	27.6
4. New Zealand	25.6
5. Switzerland	25.5
6. Denmark	20.5
7. Australia	18.5
8. Norway	17.8
9. Iceland	17.4
10. United Kingdom	14.0

Human and Military Resources

BIRTH RATE, HIGHEST ANNUAL (per 1,000 population, 1957)¹

1. Mexico	46.9
2. China	nd ²
3. Brazil	43.0 ³
4. Thailand	34.2 ⁴
5. Iran	32.2
6. Canada	28.6 ⁵
7. Poland	27.9 ⁶
8. U. of So. Africa	25.6 ⁷
9. U.S.S.R.	25.0 ³
10. United States	25.0

¹ Larger nations only; all Central American and most smaller South American and Caribbean nations have annual birth rates usually exceeding 35.0. Other smaller nations usually exceeding 35.0 include Burma, Ceylon, Egypt, Formosa, Jordan and Malaya. ² 44.8 Taiwan. ³ Rough estimate, 1956. ⁴ 1955. ⁵ Not including Yukon and Northwest Territories. ⁶ 1956. ⁷ White population only.

DEATH RATE, LOWEST ANNUAL (per 1,000 population, 1957)¹

1. Iran	7.0
2. Netherlands	7.5

3. U.S.S.R.	7.7 ²
4. Canada	8.3 ³
5. Japan	8.3
6. U. of So. Africa	8.8 ⁴
7. Australia	8.8 ⁵
8. Peru	9.0 ⁶
9. United States	9.6
10. Spain	9.8

¹ Following smaller nations not included: Syria, 5.7 (incomplete registration); Israel, 6.2 (Jewish population only); Puerto Rico, 7.0; Uruguay, 7.0; Greece, 7.6; Formosa, 8.0; Jordan, 8.4 (1956); Norway, 8.6; Dominican Republic, 9.1; Denmark, 9.3; New Zealand, 9.3 (not including Maoris); Finland, 9.4; Bulgaria, 9.4 (1956). ² Rough estimate, 1956. ³ Not including Yukon and Northwest Territories. ⁴ White population only. ⁵ Not including full-blooded aborigines. ⁶ Not including jungle Indians.

ARMIES (estimated personnel in thousands, 1957-58)

1. China	3,000 ¹
2. U.S.S.R.	2,300
3. United States	900 ²
4. South Korea	700
5. France	565

6. Yugoslavia	555
7. Spain	460
8. Turkey	425
9. North Korea	400 ³
10. India	400

¹ Communist China; Formosan forces estimated at 300,000. ² June, 1958. ³ Not including about 350,000 Chinese.

NAVIES (number of warships, 1957)¹

1. United States	574
2. U.S.S.R.	213
3. United Kingdom	101
4. France	30
5. Spain	23
6. Argentina	20
7. Sweden	19
8. Netherlands	15
9. Canada	14
10. Italy	14

¹ Dec. 1957, not including submarines, frigates and escort craft; estimated number of submarines on that date: U.S.S.R., 500; U.S., 205; United Kingdom, 54.

SCIENCE

MEASURES AND WEIGHTS

UNITS OF LENGTH

Metric System

The meter was originally intended to be one ten-millionth of the earth's quadrant, a quadrant being one-quarter of a circumference. However, because of the difficulty of determining such a length with accuracy, this definition was abandoned. The meter is now considered to be the distance at 0°C between two microscopic marks on the International Prototype Meter, a platinum-iridium bar, kept by the International Bureau of Weights and Measures at Sèvres, France, a suburb of Paris.

In 1927, the International Conference on Weights and Measures adopted a secondary definition of the meter in terms of light-waves. According to this definition, one meter is equivalent to 1,553,164.13 wave lengths of the red light from cadmium.

Unit	Comparison	English equivalent
Millimeter (mm)	.001 meter	.0394 inch
Centimeter (cm)	.01 meter	.3937 inch

Dekameter (dkm)	10 meters	32.8083 feet
Hectometer (hm)	100 meters	328.0833 feet
Kilometer (km)	1000 meters	.62137 mile

English System

According to legend, the yard was established by Henry I as the distance from the point of his nose to the end of his thumb when his arm was outstretched. The British Imperial Yard was defined in 1878 by the Weights and Measures Act as the distance at 62°F between two fine lines on gold studs sunk in a bronze bar known as the "No. 1 Standard Yard." This is equivalent to .914399 meter. In the United States, the yard is defined in terms of the meter, using as a standard the U. S. Prototype Meter. According to this definition, the yard is 3600/3937 (or .914402) meter, slightly longer than the British Imperial Yard.

UNITS OF WEIGHT OR MASS

The term *mass* denotes the amount of matter contained in an object, while the term *weight* denotes the gravitational pull of the earth on the object. For practical purposes, the two terms are synonymous.

Metric System

The gram was originally intended to be equal to the mass of one cubic centimeter of pure water at 4°C. However, because of

the difficulty of making exact measurement, a small error was made; and it has since been found that a kilogram of pure water occupies 1.000028 cubic decimeters. The standard for the kilogram is a platinum-iridium cylinder, called the International Prototype Kilogram, which is kept at the International Bureau of Weights and Measures in France.

Kilogram (kg)	1000 grams	2.2046 pounds	2.6792 pounds	2.6792 pounds
Metric ton (t)	1000 kg	1.1023 tons*		

* Short tons. A metric ton is equivalent to .9842 long ton.

English System

The English System is complicated by the existence of three different kinds of weight: *avoirdupois weight*, used for common purposes; *troy weight*, used for weighing gold, silver, etc.; and *apothecaries weight*, used for making up medical prescriptions.

The British Imperial Pound (avoirdupois) is defined as the mass of a pure plat-

inum cylinder kept by the Standards Department of the Board of Trade. In the United States, the pound (avoirdupois) is defined in terms of the kilogram, using as a standard the U. S. Prototype Kilogram. According to this definition, the pound is equal to .4535924277 kilogram, making it infinitesimally smaller than the British Imperial Pound.

UNITS OF CAPACITY

Metric System

The liter is a secondary unit of capacity defined as the volume occupied by one kilogram of pure water at 4°C. It was intended that the liter should exactly equal one cubic decimeter, but as an error was made in measurement, has since been found to equal 1.000028 cubic decimeters.

Unit	Comparison	English equivalents	
		Liquid	Dry
Milliliter (ml)	.001 liter	.0338 fl oz	.0018 pt
Centiliter (cl)	.01 liter	.3381 fl oz	.0182 pt
Deciliter (dl)	.1 liter	3.3815 fl oz	.1816 pt
Liter (l)		1.0567 qt	.9081 qt
Dekaliter (dkl)	10 liters	2.6418 gal	1.1351 pk
Hectoliter (hl)	100 liters	26.4178 gal	2.8378 bu

English System

In Great Britain, the standard unit of capacity for measuring both liquid and dry commodities is the British Imperial Gallon. It is defined as the volume of ten pounds of pure water at 62°F and contains 277.418 cubic inches. The bushel is defined as eight gallons (2218.192 cubic inches).

In the United States, there are two separate standards. The unit for measuring liquids is the gallon, which is defined as 231 cubic inches; the unit for measuring dry commodities is the bushel, which is defined as 2150.42 cubic inches.

UNITS OF CIRCULAR MEASURE

Unit	Comparison
Second (")	
Minute (')	60 seconds

COMMON FORMULAS

Circumference

Circle: $C = \pi d$, in which π is 3.1416 and d the diameter.

Area

Triangle: $A = \frac{ab}{2}$, in which a is the base and b the height.

Square: $A = a^2$, in which a is one of the sides.

Rectangle: $A = ab$, in which a is the base and b the height.

Trapezoid: $A = \frac{h(a+b)}{2}$, in which h is the height, a the longer parallel side, and b the shorter.

Regular pentagon: $A = 1.720a^2$, in which a is one of the sides.

Regular hexagon: $A = 2.598a^2$, in which a is one of the sides.

Regular octagon: $A = 4.828a^2$, in which a is one of the sides.

Circle: $A = \pi r^2$, in which π is 3.1416 and r the radius.

Volume

Cube: $V = a^3$, in which a is one of the edges.

Rectangular prism: $V = abc$, in which a is the length, b the width, and c the depth.

Pyramid: $V = \frac{Ah}{3}$, in which A is the area of the base and h the height.

Pint (pt)		33.6003	.5506 liter
Quart (qt)	2 pints	67.2006	1.1012 liters
Peck (pk)	16 pints	537.605	8.8096 liters
	8 quarts		
Bushel (bu)	64 pints	2150.42	35.2383 liters
	32 quarts		
	4 pecks		

Cylinder: $V = \pi r^2 h$, in which π is 3.1416, r the radius of the base, and h the height.

Cone: $V = \frac{\pi r^2 h}{3}$, in which π is 3.1416, r the radius of the base, and h the height.

Sphere: $V = \frac{4\pi r^3}{3}$, in which π is 3.1416 and r the radius.

Miscellaneous

Speed per second acquired by falling body: $v = 32t$, in which t is the time in seconds.

Distance in feet traveled by falling body: $d = 16t^2$, in which t is the time in seconds.

Speed of sound in feet per second through any given temperature of air:

$V = \frac{1087\sqrt{273+t}}{16.52}$, in which t is the temperature Centigrade.

Cost per hour of operation of electrical device: $C = \frac{Wtc}{1000}$, in which W is the number of watts, t the time in hours, and c the cost per kilowatt-hour.

Conversion of matter into energy (Einstein's Theorem): $E = mc^2$, in which E is the energy in ergs, m the mass of the matter in grams, and c the speed of light in centimeters per second. ($c^2 = 9 \cdot 10^{20}$).

Abbreviations

The National Bureau of Standards recommends that the period be omitted after all abbreviations of units unless the

abbreviation forms an English word, and that the same abbreviation be used for both singular and plural.

FAHRENHEIT AND CENTIGRADE SCALES

Zero on the Fahrenheit scale represents the temperature produced by the mixing of equal weights of snow and common salt.

Absolute zero is theoretically the lowest possible temperature, the point at which all molecular motion would cease.

	F	C
Bolling point of water	212°	100°
Freezing point of water	32°	0°
Absolute zero	-459.6°	-273.1°

To convert Fahrenheit to Centigrade, subtract 32 and multiply by 5/9.

To convert Centigrade to Fahrenheit, multiply by 9/5 and add 32.

ROMAN NUMERALS

Roman numerals are expressed by letters of the alphabet and are rarely used today except for formality or variety.

There are three basic principles for reading Roman numerals:

1. A letter repeated once or twice repeats its value that many times. (XXX=30, CC=200, etc.).

2. One or more letters placed after another letter of greater value increases the greater value by the amount of the smaller. (VI=6, LXX=70, MCC=1200, etc.).

3. A letter placed before another letter of greater value decreases the greater value by the amount of the smaller. (IV=4, XC=90, CM=900, etc.).

Letter	Value	Letter	Value
I	1	LX	60
II	2	LXX	70
III	3	LXXX	80
IV	4	XC	90
V	5	C	100
VI	6	D	500
VII	7	M	1,000
VIII	8	V̄	5,000
IX	9	X̄	10,000
X	10	L̄	50,000
XX	20	C̄	100,000
XXX	30	D̄	500,000
XL	40	M̄	1,000,000
L	50		

SIMPLE INTEREST FOR \$100

To find the interest for any amount of money, move the decimal point of that amount two places to the left and multi-

ply by the figure obtained from the table.

For figuring simple interest, the year is considered to have 360 days.

	1 Day	7 Days	1 Month	3 Months	6 Months	1 Year

MISCELLANEOUS UNITS

AGATE: Originally a measurement of type size (5½ points). Now equal to 1/14 inch. Used in printing for measuring column length.

ANGSTROM (A or λ): .0001 micron or .0000001 mm. Used for measuring length of light waves.

ASTRONOMICAL UNIT (A.U.): 93,003,000 miles, the average distance of the earth from the sun. Used in astronomy.

BALE: A large bundle of goods. In the U. S., the approximate weight of a bale of cotton is 500 pounds. The weight varies in other countries.

- BARREL (bbl):** For liquids, $31\frac{1}{2}$ gallons or 732.6 cubic inches. For dry commodities, except cranberries: 105 dry quarts or 705.6 cubic inches. For cranberries: 582.6 cubic inches.
- BOARD FOOT (fbm):** 144 cubic inches (12 in. x 12 in. x 1 in.). Used for lumber.
- BOLT:** 40 yards. Used for measuring cloth.
- CABLE:** About 100 fathoms or 600 feet. Used for measuring lengths of cable.
- CARAT (c):** 200 milligrams or 3.086 grains troy. Originally the weight of a seed of the carob tree in the Mediterranean region. Used for weighing precious stones. Also a measure of the purity of gold alloy, indicating how many parts out of 24 are pure. Eighteen carat gold, for example, is $\frac{3}{4}$ pure.
- CHAIN (ch):** a chain 66 feet or one-tenth of a furlong in length, divided into 100 parts called links. One mile is equal to 80 chains. Used in surveying and sometimes called Gunter's chain.
- CUBIT:** 18 inches or 45.72 cm. Derived from distance between elbow and tip of middle finger.
- ELL, ENGLISH:** $1\frac{1}{4}$ yards or $1\frac{1}{32}$ bolt. Used for measuring cloth.
- FATHOM (fath):** 6 feet or 1.8288 m. Derived from the distance to which a man can stretch his arms. Used for measuring cables and depths of water.
- FREIGHT TON (also called MEASURE-MENT TON):** 40 cubic feet of merchandise. Used for cargo freight.
- GREAT GROSS:** 12 gross or 1728.
- GROSS:** 12 dozen or 144.
- HAND:** 4 inches or 10.16 cm. Derived from the width of the hand. Used for measuring the height of horses at withers.
- HOGSHEAD (hhd):** 2 liquid barrels or 14.653 cubic inches.
- HORSEPOWER:** The power needed to lift 33,000 pounds a distance of one foot in one minute (about $1\frac{1}{2}$ times the power an average horse can exert). Used for measuring the power of steam engines, etc.
- KNOT:** Not a distance, but the rate of speed of one nautical mile per hour. Used for measuring speed of ships.
- LEAGUE:** Rather indefinite and varying measure, but usually estimated at 3 miles in English-speaking countries.
- LIGHT-YEAR:** 5,880,000,000,000 miles, the distance light travels in a year at the rate of 186,272 miles per second. (If an astronomical unit were represented by one inch, a light-year would be represented by about one mile.) Used for measurements in interstellar space.
- LINK:** One-hundredth of a chain or 7.92 inches. Used in surveying.
- MAGNUM:** Two-quart bottle. Used for measuring wine, etc.
- MICRON (μ):** .001 millimeter. Used for scientific measurements.
- MIL:** .001 inch. Used for measuring size of wire. The area of a cross-section of wire is usually expressed in circular mils, a circular mil being the area of a circle one mil in diameter. A wire one inch in diameter has a cross-section area of one million circular mils.
- MILLIMICRON (m μ):** .001 micron or .000001 mm. Used for scientific measurements.
- NAUTICAL MILE (also called GEOGRAPHICAL or SEA MILE):** Equal to a minute or $1/21600$ of a great circle of the earth. Length varies in different countries. In Great Britain, it is 6080 feet or 1853.2 meters, and in the United States, it is 6080.2 feet or 1853.248 meters. The International Hydrographic Bureau proposed in 1929 a length of 1852 meters or 6076.097 feet, which has been adopted by several countries.
- PARSEC:** Approximately 3.26 light-years or 19.2 trillion miles. Term is combination of first syllables of *parallax* and *second*, and distance is that of imaginary star when lines drawn from it to both earth and sun form a maximum angle or parallax of one second ($1/3600$ degree). Used for measuring interstellar distances.
- PI (π):** 3.14159265+. The ratio of the circumference of a circle to its diameter. For practical purpose, the value is used to four decimal places: 3.1416.
- PICA:** $\frac{1}{6}$ inch or 12 points. Used in printing for measuring column width, etc.
- PIPE:** 2 hogsheds. Used for measuring wine and other liquids.
- POINT:** .013837 (approximately $1/72$) inch or $1/12$ pica. Used in printing for measuring type size.
- QUINTAL:** 100,000 grams or 220.46 pounds avoirdupois.
- QUIRE:** Used for measuring paper. Sometimes 24 sheets but more often 25. There are 20 quires in a ream.
- REAM:** Used for measuring paper. Sometimes 480 sheets, but more often 500 sheets.
- SCORE:** 20 units.
- SPAN:** 9 inches or 22.86 cm. Derived from the distance between the end of the thumb and the end of the little finger when both are outstretched.
- STONE:** Legally 14 pounds avoirdupois in Great Britain.
- TOWNSHIP:** U. S. land measurement of almost 36 square miles. The south border is 6 miles long. The east and west borders, also 6 miles long, follow the meridians, making the north border slightly less than six miles long. Used in surveying.
- TUN:** 252 gallons, but often larger. Used for measuring wine and other liquids.

Mean and Median

The mean, also called the average, of a series of quantities is obtained by finding the sum of the quantities and dividing it by the number of quantities. In the series 1,3,5,18,19,20,25, the mean or average is 13 —i.e., 91 divided by 7.

The median of a series is that point which so divides it that half the quantities are on one side, half on the other. In the above series, the median is 18.

The median often better expresses the common-run, since it is not, as is the mean, affected by an excessively high or low figure. In the series 1,3,4,7,55, the median of 4 is a truer expression of the common-run than is the mean of 14.

Chemical Elements

* Mass number of the isotope of longest known half-life.

† Isotopes are different forms of the same element, having the same atomic number but different atomic weights.

The number of isotopes given includes only those that are stable and natural occurring, excluding those marked ¶¶.

‡ Liquid. § Amorphous. ¶ Graphite. ** Crystalline. †† Compressed. ‡‡ Cast. §§ Exact date doubtful

—born 1193 and died 1280. ¶¶ Have been artificially produced. *** New name adopted by International Union of Chemistry, replacing old name in parentheses. < Is less than. > Is greater than.

NOTE: Figures in parentheses are tentative or theoretical. Quantities made of elements from 96 to 102 have been too small to establish melting points and similar facts.

The number of isotopes of each element is increased by discovery or by manufacture.

Scientific Inventions, Discoveries and Theories

Source: *Encyclopaedia Britannica*.

Inventions

- Adding machine, recording:** William S. Burroughs, 1888.
- Airplane:** Wilbur and Orville Wright, 1903.
- Air brake, railroad:** George Westinghouse, 1868.
- Air pump:** Otto von Guericke, 1650.
- Automobile:** (Product of inventions of many men. Gottlieb Daimler is frequently given credit, c.1887.)
- Bakelite:** Leo H. Baekeland, 1908.
- Balloon, hot-air:** Joseph and Jacques Montgolfier, 1783.
- Barometer:** Evangelista Torricelli, 1643.
- Camera, Kodak:** George Eastman, 1888.
- Carburetor, spray:** Charles E. Duryea, 1892.
- Cellophane:** J. E. Brandenberger, 1911.
- Celluloid:** John W. and I. S. Hyatt, 1870.
- Clock, pendulum:** Christiaan Huygens, 1656.
- Converter, Bessemer:** William Kelly, 1851. (Patent bought by Sir Henry Bessemer, who made a similar invention in 1856.)
- Cotton gin:** Eli Whitney, 1793.
- Cyanide:** Nikodem Caro and Adolf Frank, 1905.
- Cyclotron:** Ernest O. Lawrence, 1931.
- Daguerreotype process:** Louis J. M. Daguerre, 1839.
- Diesel engine:** Rudolf Diesel, 1897.
- Dynamite:** Alfred B. Nobel, 1862.
- Dynamo:** Michael Faraday, 1831.
- Dynamo, industrial:** Zénobe Gramme, 1872.
- Electromagnet:** William Sturgeon, 1823.
- Electroplating:** Luigi Brugnatelli, 1805.
- Elevator, passenger:** Elisha G. Otis, 1857.
- Elevator safety device:** Elisha G. Otis, 1852.
- Engine, high-speed internal-combustion:** Gottlieb Daimler, 1885.
- Filament, tungsten:** Irving Langmuir, 1915.
- Flying shuttle:** John Kay, 1733.
- Food preservation, hermetically sealed (meat):** François (Nicolas) Appert, 1810, with little success.
- Fountain pen:** Lewis E. Waterman, 1884. (First successful one.)
- Frequency modulation (FM):** Edwin H. Armstrong, 1933.
- Guncotton:** Christian Schönbein, 1845.
- Gyrocompass:** Elmer A. Sperry, 1905.
- Gyroscope:** Léon Foucault, 1852.
- Helicopter:** Igor I. Sikorsky, 1909; Louis C. Bréguet equipped first passenger carrying helicopter, 1909; first successful modern helicopter, Heinrich K. J. Focke, 1937-41.
- Hydroplane:** Charles M. Ramus propounded idea around 1870; Glenn H. Curtiss, 1911.
- Jet propulsion (aircraft):** Sir Frank Whittle, 1930.
- Lamp, electric incandescent:** (Inventor uncertain; Thomas A. Edison, who made a lamp in 1879, is sometimes credited.)
- Lens, bifocal:** Benjamin Franklin, c.1760.
- Lightning rod:** Benjamin Franklin, 1752.
- Linotype machine:** Ottmar Mergenthaler, 1885 (patent); first used, 1886.
- Lithography:** Aloys Senefelder, 1796.
- Machine gun:** Richard J. Gatling, 1861.
- Match, friction:** John Walker, 1827.
- Mercury-vapor lamp:** Peter C. Hewitt, 1912.
- Microscope, compound:** Zacharias Janssen, 1590.
- Microscope, electron:** Vladimir Zworykin et al., 1939.
- Miner's safety lamp:** Sir Humphry Davy, 1815.
- Monotype machine:** Tolbert Lanston, 1887.
- Motion pictures:** Thomas A. Edison, 1893.
- Motion pictures, sound:** (Product of various inventions. First picture with synchronized musical score: *Don Juan*, Warner Bros., 1926. First picture with spoken dialogue: *The Jazz Singer*, Warner Bros., 1927.)
- Motor, A-C:** Nikola Tesla, 1892.
- Ophthalmoscope:** Hermann von Helmholtz, 1851.
- Phonograph:** Thomas A. Edison, 1877.
- Photography, color:** Gabriel Lippmann, 1891.
- Power loom:** Edmund Cartwright, 1785.
- Printing, movable-type:** Johann Gutenberg (?), c.1440.
- Printing press, rotary:** Richard Hoe, 1847.
- Radar:** Gregory Breit & Merle A. Tuve, 1925.
- Radio:** (Product of various inventions. First practical system of wireless telegraphy: Guglielmo Marconi, 1895.)
- Radio telephone:** Lee De Forest, 1906.
- Radio tube, diode:** Sir John Ambrose Fleming, 1904.
- Radio tube, triode:** Lee De Forest, 1906.
- Rayon:** George Andemars (first known patent), 1855; perfected by Sir Joseph W. Swan, 1883.
- Reaper:** Cyrus McCormick, 1834.
- Revolver:** Samuel Colt, 1835.
- Rifle, automatic:** John M. Browning, 1918.
- Rubber, vulcanized:** Ch. Goodyear, 1839.
- Screw propeller:** John Ericsson, 1837.
- Self-starter, automobile:** Charles F. Kettering, 1911.
- Sewing machine:** Elias Howe, 1846 (patented). Idea of lock-stitch machine conceived independently by Walter Hunt, 1832-4.
- Spinning frame:** Sir Richard Arkwright, 1769.
- Spinning jenny:** James Hargreaves, 1764.
- Spinning mule:** Samuel Crompton, 1779.
- Steamboat:** Robert Fulton, 1807. (First commercially successful one in U. S.)

- Steam engine:** James Watt, 1765. (First practical one.)
Tank, military: Sir Ernest Swinton, 1914.
Telegraph, electromagnetic recording: Samuel F. B. Morse, 1837.
Telephone: Alexander Graham Bell, 1876.
Telescope: Hans Lippershey (?), c.1608.
Television: Successful demonstration by J. L. Baird in England and C. F. Jenkins in U. S., in early 1920's. (First commercial TV: July 1, 1941, over WNBT, New York.)
Thermometer: Galileo Galilei, 1593.
Tire, pneumatic: John B. Dunlop, 1888.
Tractor, caterpillar: Benjamin Holt, 1900.
Transformer, electric: Wm. Stanley, 1885.
Transistor: John Bardeen, William Shockley and Walter Brattain, 1948.
Typewriter: First practical one invented by Christopher Sholes, Carlos Glidden and Samuel W. Soule in 1867; patented by Sholes in 1868.
Zeppelin: Ferdinand von Zeppelin, 1900.
- Discoveries and Theories**
- Adrenaline, isolation of:** Jokichi Takamine, 1901.
Aluminum manufacture by electrolytic action: Charles M. Hall, 1886.
Antitoxin, diphtheria: Emil von Behring, 1890.
Atom smashing with slow neutrons: Enrico Fermi, 1934. (Experiment repeated by Lise Meitner and Otto Hahn in 1938.)

Light, electromagnetic theory of: James Clerk Maxwell, 1873.
Light, velocity of: Olaus Römer, 1675.
Molecular hypothesis: Amadeo Avogadro, 1811.
Neutron: James Chadwick, 1932.
Ohm's Law: Georg S. Ohm, 1827.
Ozone: Christian Schönbein, 1839.
Penicillin: Sir Alexander Fleming, 1929.
Periodic table: Dmitri Mendeleev, 1869.
Positron: Carl D. Anderson, 1932.
Proton: Ernest Rutherford, 1919.
Psychoanalysis: Sigmund Freud, c.1904.
Quantum mechanics: Werner Heisenberg, 1925.
Quantum theory: Max von Planck, 1901.
Rabies preventive: Louis Pasteur, 1885.
Radioactivity: Antoine Becquerel, 1896.
Radioactivity, artificial: Frédéric and Irène Joliot-Curie, 1934.
Relativity, theories of: Albert Einstein, 1905-53.
Salk antipolio vaccine: Jonas E. Salk, announced successful 1955.
Schick test of susceptibility to diphtheria: Béla Schick, 1913.
Secretin, isolation of: Sir William Bayliss and Ernest Starling, 1902.
Soda manufacture from salt: Ernest Solvay, 1861.
Solar system, heliocentricity of: Nicolaus Copernicus, 1530. (Also Aristarchus of Samos, 3rd century B.C.)
Spectrum analysis: Robert Bunsen and Gustav Kirchhoff, 1859.
Sulfa drugs as bactericides: Gerhard Domag, 1932.
Surgery, antiseptic: Sir Joseph Lister, 1867.
Tuberculosis bacillus: Robert Koch, 1882.
Vaccination: Edward Jenner, 1796.
Virus, crystalized: Wendell M. Stanley, 1935.
Vitamin A: Elmer V. McCollum and M. Davis, 1912-14.
Vitamin B: Elmer V. McCollum, 1915-16.
Vitamin C: A. Holst and T. Froehlich, 1912.
Vitamin D: Elmer V. McCollum, 1922.
Vitamin D, irradiated: Harry Steenbock, 1924.
Wassermann test for syphilis: August von Wassermann, 1906.
Water, synthesis of: Henry Cavendish, 1781.
Wilson Cloud Chamber: Charles T. R. Wilson, 1911.
X-rays: Wilhelm Roentgen, 1895.

Communicable Diseases

Source: *Control of Communicable Diseases in Man*, an official report of the American Public Health Assn.

Disease	Incubation period*	Period of communicability
Chickenpox (varicella).....	2 to 3 weeks	From 1 day before appearance of vesicles to 6 days after.
Common cold.....	12 to 72 hours; usually 24 hrs.	From 1 day before onset to 5 days after.
Conjunctivitis.....	1 to 3 days	During course of active infection.
Diphtheria.....	2 to 5 days	Usually 2 weeks or less; seldom more than 4 weeks.
Dysentery, amebic.....	3 to 4 weeks (varies widely)	During infection; possibly for years if untreated.
Food poisoning: Botulism.....	Within 18 hours	Not applicable.
Salmonella infection.....	6 to 48 hours in epidemics	3 days to 3 weeks (extremely variable).
Staphylococcus intoxication.....	½ to 4 hours	Not applicable.
German measles (rubella)....	14 to 21 days; usually 18	At least 4 days after onset of catarrhal symptoms.
Gonorrhea.....	3 to 9 days; sometimes 14	Indefinitely unless treated.
Impetigo contagiosa.....	Within 5 days; often 2	Until lesions are healed.
Influenza.....	1 to 3 days	Probably 1 week after onset.
Measles (rubeola).....	10 days (to onset) 14 days (to rash)	From 4 days before rash appears to 5 days after.
Meningitis, meningococcal.....	2 to 10 days	1 day after appropriate medication.
Mumps.....	12 to 26 days; commonly 18	From 2 days before onset to 9 days after, or until swelling subsides.
Pneumonia: Bacterial.....	Believed to be 1 to 3 days	Unknown.
Virus.....	Believed to be 7 to 21 days; commonly 12	Unknown.
Poliomyelitis.....	7 to 21 days; commonly 12	From late incubation to first few days after onset; persists in feces for 3 to 6 weeks or more.
Rabies (hydrophobia).....	2 to 6 weeks or longer	Rarely communicated from man to man.
Rheumatic fever.....	Not applicable†	Not known to be communicable.
Scarlet fever and streptococcal sore throat.....	2 to 5 days	During incubation and clinical illness, about 10 days. May last for months in untreated patients.
Smallpox.....	7 to 16 days; commonly 12	From first symptoms to disappearance of scabs and crusts, a period of 2 to 3 weeks.
Syphilis.....	10 days to 10 weeks; usually 3 weeks	Variable and not definitely known.
Tetanus.....	4 days to 3 weeks	Not communicable from man to man.
Trichinosis.....	2 to 28 days after eating infected meat; usually 9 days	Not directly transmitted from man to man.
Tuberculosis.....	4 to 6 weeks (to primary phase)	As long as tubercle bacilli are discharged by patient.
Typhoid fever.....	1 to 3 weeks	As long as typhoid bacilli appear in excreta; 2 to 5% of patients become permanent carriers.
Whooping cough (pertussis)...	Commonly 7 days, almost uniformly within 10 days, and not exceeding 21 days	From 7 days after exposure to 3 weeks after onset of typical paroxysms.

* Usual limits. † Usually precipitated by a previous infection.

Gestation, Incubation and Longevity of Certain Animals

CONTRACT BRIDGE

By B. JAY BECKER

Top Record-Holder in Masters' Individual Championship Play

Contract bridge was invented by Harold S. Vanderbilt in 1925. The new game was a great improvement over the parent game, auction bridge, which in turn had been derived from whist, a card game of two centuries standing.

Contract bridge developed rapidly but did not catch fire with the public until the late Ely Culbertson, a promotion genius of the first order, staged a simulated grudge match against Sidney Lenz in 1931. Newspapers everywhere carried daily stories on the hectic match refereed by Lieutenant (now General) Alfred M. Gruenther.

Various systems of bidding sprang up during the first years of contract bridge but after five or six years of experimentation the best features of each were joined to form what is essentially the system in use today. Among the leading contributors to the evolution of present day methods were Vanderbilt, Culbertson, Lenz, Work, Whitehead, Reith, Goren, Blackwood, Roth, Stayman.

Today, bridge is regarded as almost a social necessity. Hundreds of textbooks have been written and many newspapers carry daily bridge columns. It is estimated there are 25 million bridge players in the United States. Sectional, national and international tournaments are conducted by the American Contract Bridge League, governing body of bridge.

EVALUATION

For many years, the chief method of determining the value of a hand was by means of a scale called honor tricks. Culbertson was chief proponent of this method. High cards are, for example, valued as follows:

A = 1 H. T.	K-x = $\frac{1}{2}$ H. T.
K-Q = 1 H. T.	Q-J-x = $\frac{1}{2}$ H. T.
A-K = 2 H. T.	Q or J = plus value
A-Q = $1\frac{1}{2}$ H. T.	

During the past ten years the honor trick method has been largely supplanted by the point count method. Point count was devised by Milton Work back in the auction days, but was not generally accepted until Charles H. Goren took a prominent part in bringing it to the attention of the public. The experts had played point count for years, but to the lesser players it was relatively unknown. The introduction of point count has done a great deal to raise the level of bidding skill for the average player.

Point count evaluation divides into two categories: high card points and distributional points. With balanced hands—hands without a void or singleton—the high card point count is both practical and accurate and reflects essentially the true value of a hand.

HIGH CARD POINTS

Ace = 4 points	Queen = 2 points
King = 3 points	Jack = 1 point
Total points in deck	= 40
Points in each suit	= 10
Points in average hand	= 10
Points required for game	= 26
Points required for small slam	= 33
Points required for grand slam	= 37

Opening notrump bids are characterized by distribution which is usually 4-3-3-3, 4-4-3-2, or in some cases 5-3-3-2 and strength or stoppers in all four suits. The required point count is:

Opening 1 N. T. = 16 to 18 points
Opening 2 N. T. = 22 to 24 points
Opening 3 N. T. = 25 to 27 points

With 19, 20 or 21 points, bid one of a suit and jump in notrump over partner's response. Responses to an opening one notrump bid, with a balanced hand:

Raise 1 N. T. to 2 N. T. with 8 or 9 points
Raise 1 N. T. to 3 N. T. with 10 to 14 points
Raise 1 N. T. to 6 N. T. with 17 to 20 points
Raise 1 N. T. to 7 N. T. with 21 points or more

DISTRIBUTIONAL POINT COUNT

Two methods of evaluating distributional points are in general use. According to the Goren method 3 points are taken for each void, 2 points for each singleton and 1 point for each doubleton. These are added to the high card point count to determine the value of the hand.

According to the Karpin method 1 point is taken for each card in a suit above four. These points are then added to the high card points to determine the value of the hand.

As new information is obtained during the bidding, the original distributional point evaluation may rise or fall. Distributional point count should not be rigidly followed. It is a flexible yardstick.

OPENING SUIT BIDS

The opening bid of one in a suit ranges usually from 12 to 21 points. All hands containing 14 high card points are compulsory opening bids. Distributional factors are important in evaluating a hand. Distribution is a key factor in every deal.

In choosing the suit with which to open the bidding, the longest suit is usually bid first. When two suits are of equal length the higher ranking suit is generally bid first. When there are three biddable four-card suits the suit that is chosen is the one directly beneath the singleton in rank.

RESPONSES TO SUIT BIDS

Any new suit named by the responding hand compels the opening bidder to bid

again. With 6 points or more the partner of the opening bidder of one in a suit must make a response. He may name a new suit, respond in notrump or raise the opening bidder's suit.

The single raise of the opening bidder's suit denotes adequate trump support and 6 to 9 points which include distributional values. The response of one notrump denotes a balanced hand without adequate trump support with 6 to 9 points in high cards. The response of one of a new suit denotes 6 to 16 points. The response of two in a new suit denotes 10 to 16 points.

The jump raise of the opening bidder's suit, for example 1 spade—3 spades, denotes at least four trumps and 13 to 15 points. The response of 2 notrump to the opening bid of one in a suit denies adequate trump support and represents a balanced hand with 13 to 15 points in high cards, plus stoppers in the remaining three suits. The response of 3 notrump indicates 16 to 18 points and a balanced hand with stoppers in the other three suits.

BIDDABLE SUITS

Any five card suit is biddable. Any four card suit which includes four high card points is biddable.

REBIDS BY OPENING BIDDER

Having opened with one of a suit the opening bidder may identify a minimum type of hand by rebidding one notrump or by repeating his previous suit in minimum terms. A rebid by the opening bidder, where he goes one level higher than necessary, represents a strong hand containing at least 17 points.

OPENING BID OF TWO IN A SUIT

This bid is forcing to game. It represents a hand which for practical purposes can make a game by itself. The best method in use to determine whether a hand ranks as a two bid is to count the losers, and if the hand then contains enough winners to ensure a game the hand qualifies as a two bid. The response to a two bid is 2 notrump unless the responder has more than 6 points in which case he either raises his partner, bids his own suit or jumps in notrump.

OVERCALLS

The bid over an adverse opening bid, when made in the one level, usually ranges in high cards between 7 and 13 points and includes a good suit. The overcall in the two level is made with a strong suit and usually has about 12 or 13 points in high cards. In making overcalls, the number of winning tricks which are probable is more important than the point count. The overcaller should not be subject to a penalty in excess of 500 points in the event he should be doubled. The informative double over an adverse opening bid represents at least an opening bid of its own.

BLACKWOOD SLAM CONVENTION

After the partners have agreed definitely or inferentially upon a suit as trump the bid of 4 notrump by either of them is an artificial bid requesting partner to name the number of Aces he has. The responses are as follows:

- No Aces — 5 Clubs
- 1 Ace — 5 Diamonds
- 2 Aces — 5 Hearts
- 3 Aces — 5 Spades
- 4 Aces — 5 Notrump

When the response is followed by a 5 notrump bid it should be construed as a request for the number of Kings. The responses are as follows:

- No Kings — 6 Clubs
- 1 King — 6 Diamonds
- 2 Kings — 6 Hearts
- 3 Kings — 6 Spades
- 4 Kings — 6 Notrump

STAYMAN NOTRUMP CONVENTION

The response of 2 Clubs to partner's opening one notrump bid is an artificial bid requesting the opener to bid a four card major suit. If the opening bidder has no four card major he replies by bidding 2 diamonds with a minimum one notrump bid, or 2 notrump with a maximum notrump bid.

IN GENERAL

Bridge is a partnership game. In bidding, each player tries to represent to his partner the strength or weakness of his hand. Exact bidding will produce exact results. Weak hands are bid weakly; strong hands are bid strongly. Forcing bids must be respected. Partners' bids should be trusted more than the opponents' bids.

High card point count in balanced hands is very accurate. Distributional point count is sometimes treacherous and common sense should be employed where the distributional point count does not appear to give an accurate evaluation of the true value of the hand.

In counting defensive tricks against a suit contract, honor tricks provide a more reliable gauge than point count.

Remember that the important thing in bridge is the number of tricks that are taken, not the number of points a side has. Remember also that all the rules in bridge are made to be broken at the appropriate time. There is no such word as "never" when it comes to stating a general principle. You can be dealt 635,013,559,600 different hands in bridge. No general rules can be expected to cover all possibilities. Imagination and ingenuity are important qualities to be exercised.

Large penalties should be avoided. A game should not be bid unless there is nearly an even chance of making it; a small slam should not be bid unless there is an even chance at least to make it; a grand slam should not be bid unless there is at least a 2 to 1 probability of making it. Play probabilities, and not hunches. Bridge is a scientific game.

★ CELEBRATED PERSONS ★

Prepared with the Cooperation of

MARQUIS-WHO'S WHO Inc., Publishers of WHO'S WHO IN AMERICA

Locations and dates are those of birth. A name in parentheses is the original name or form of the name of the individual.

The listings in this section have been gathered from various sources, including the subjects thereof, but neither *Who's Who in America* nor the *Information Please Almanac* can guarantee the accuracy of each individual item. We have learned to accept the date and place of birth that any lady or gentleman claims for herself or himself and not argue about it. Where we have not been able to learn the date and place of birth, we have not attempted to invent the items.

André Dunoyer de Segonzac	Jacques Maritain	Bertrand Russell	José Luis Zorilla de San Martín
T. S. Eliot	John Massfield	Henri Sauguet	
Sir Jacob Epstein	W. Somerset Maugham	Albert Schweitzer	
E. M. Forster		Ignazio Silone	
Romulo Gallegos		Edith Sitwell	

National Institute of Arts and Letters

(633 W. 155th St., New York 32, N. Y.)

The National Institute of Arts and Letters was founded in 1898 by the American Social Science Association and was incorporated by an Act of Congress signed by the President on Feb. 4, 1913, for the furtherance of literature and the fine arts in the U. S. Its membership is limited to 250 native or naturalized citizens qualified by notable achievements in art, literature or music. It confers certain awards and honors for work of dis-

tinction; and, together with its affiliate, the American Academy of Arts and Letters, it elects as honorary members many distinguished artists from other countries.

An exhibition of the works of newly elected members and recipients of honors is held every spring, and other art, book and manuscript exhibitions from time to time during the year. For recipients of grants in music, a recording of their works is provided.

Members of the Institute

Dept. of Literature			
Franklin P. Adams	Bruce Catton	Paul Elliot Green	Walter Lippmann

- RICHELIEU**, Duc de Armand Jean du Plessis (cardinal); b. Paris (1585-1642).
- RILEY**, James Whitcomb (poet); b. Greenfield, Ind. (1849-1916).
- RIMSKI-KORSAKOV**, Nikolai Andreevich (composer); b. Tikhvin, Rus. (1844-1908).
- RIVERA**, Diego (painter); b. Guanajuato, Mex. (1886-1957).
- ROBESPIERRE**, Maximilien François Marie Isidore de (French Revolutionist); b. Arras, Fr. (1758-1794).
- ROBINSON**, Bill (Luther) (dancer); b. Richmond, Va. (1878-1949).
- ROBINSON**, Edwin Arlington (poet); b. Head Tide, Maine (1869-1935).
- ROCKEFELLER**, John Davison (capitalist); b. Richford, N. Y. (1839-1937).
- ROCKNE**, Knute Kenneth (football coach); b. Voss, Nor. (1888-1931).
- RODIN**, François Auguste René (sculptor); b. Paris, Fr. (1840-1917).
- ROENTGEN**, Wilhelm Konrad (physicist); b. Lennep, Prus. (1845-1923).
- ROGERS**, Will (William Penn Adair Rogers) (humorist); b. Oologah, Okla. (1879-1935).
- ROLLAND**, Romain (author); b. Clamecy, Fr. (1866-1944).
- ROMBERG**, Sigmund (composer); b. Hungary (1887-1951).
- ROSSETTI**, Dante Gabriel (painter & poet); b. London, Eng. (1828-1882).
- ROSSINI**, Gioacchino Antonio (composer); b. Pesaro, It. (1792-1868).
- ROSTAND**, Edmond (dramatist); b. Marseilles, Fr. (1868-1918).
- ROUSSEAU**, Jean Jacques (philosopher); b. Geneva, Switz. (1712-1778).
- RUBENS**, Peter Paul (painter); b. Siegen, Westphalia (1577-1640).
- RUNYON**, Alfred Damon (journalist); b. Manhattan, Kans. (1884-1946).
- RUSKIN**, John (art critic); b. London, Eng. (1819-1900).
- RUSSELL**, Lillian (Helen Louise Leonard) (soprano); b. Clinton, Iowa (1861-1922).
- RUTH**, Babe (George Herman Ruth) (baseball player); b. Baltimore, Md. (1895-1948).
- SAINT-GAUDENS**, Augustus (sculptor); b. Dublin, Ire. (1848-1907).
- SAINT-SAËNS**, Charles Camille (composer); b. Paris, Fr. (1835-1921).
- SAND**, George (Amandine Lucille Aurore Dudevant, nee Dupin) (novelist); b. Paris, Fr. (1804-1876).
- SANTAYANA**, George (philosopher); b. Madrid, Sp. (1863-1952).
- SAPPHO** (poet); b. Lesbos (lived c.600 B.C.).
- SARGENT**, John Singer (painter); b. Florence, It., of American parents (1856-1925).
- SARTO**, Andrea del (Andrea Domenico d'Agnolo di Francesco) (painter); b. Florence (1486-1531).
- SAUL** (King of Israel) (11th century B.C.).
- SCHILLER**, Johann Christoph (dramatist); b. Marbach, Wurttemberg, Ger. (1759-1805).
- SCHÖNBERG**, Arnold (composer); b. Vienna, Aus. (1874-1951).
- SCHOPENHAUER**, Arthur (philosopher); b. Danzig (1788-1860).
- SCHUBERT**, Franz Peter (composer); b. Vienna, Aus. (1797-1826).
- SCHUMANN**, Robert Alexander (composer); b. Zwickau, Saxony, Ger. (1810-1856).
- SCHUMANN-HEINK**, Ernestine (nee Roessler) (contralto); b. nr. Prague, Boh. (1861-1936).
- SCHURZ**, Carl (U. S. army officer & journalist); b. nr. Cologne, Ger. (1829-1906).

- SCOTT, Robert Falcon** (explorer); b. Devonport, Eng. (1868-1912).
- SCOTT, Sir Walter** (novelist); b. Edinburgh, Scot. (1771-1832).
- SHAKESPEARE, William** (dramatist); b. Stratford on Avon, Eng. (1564-1616).
- SHAW, George Bernard** (dramatist); b. Dublin, Ire. (1856-1950).
- SHELLEY, Percy Bysshe** (poet); b. nr. Horsham, Sus., Eng. (1792-1822).
- SHERATON, Thomas** (furniture designer); Stockton-on-Tees, Eng. (1751-1806).
- SHERIDAN, Richard Brinsley** (dramatist); b. Dublin, Ire. (1751-1816).
- SHERMAN, William Tecumseh** (army officer); b. Lancaster, Ohio (1820-1891).
- SHERWOOD, Robert Emmet** (dramatist); b. New Rochelle, N. Y. (1896-1955).
- SIBELIUS, Jean** (Johann Julius Christian Sibelius) (composer), b. Tavastehus, Fin. (1865-1957).
- SKINNER, Otis** (actor); b. Cambridge, Mass. (1858-1942).
- SLOAN, John** (painter); b. Lock Haven, Pa. (1871-1951).
- SMITH, Adam** (economist); b. Kirkcaldy, Ffls., Scot. (1723-1790).
- SMITH, Alfred Emanuel** (politician); b. New York City (1873-1944).
- SMITH, John** (American colonist); b. Wiltoughby, Lincs., Eng. (1580-1631).
- SMITH, Joseph** (religious leader); b. Sharon, Vt. (1805-1844).
- SOCRATES** (philosopher); b. Athens (469-399 B.C.).
- SOLOMON** (King of Israel); b. Jerusalem (?) (died c.933 B.C.).
- SOLOON** (lawgiver); b. Salamis, Gr. (638?-759 B.C.).
- SOPHOCLES** (dramatist); b. nr. Athens (496?-406 B.C.).
- SOTHERN, Edward Hugh** (actor); b. New Orleans, La. (1859-1933).
- SOUSA, John Philip** (composer); b. Washington, D. C. (1854-1932).
- SPENCER, Herbert** (philosopher); b. Derby, Eng. (1820-1903).
- SPENGLER, Oswald** (philosopher); b. Blankenburg, Ger. (1880-1936).
- SPENSER, Edmund** (poet); b. London, Eng. (1552?-1599).
- SPINOZA, Baruch** (philosopher); b. Amsterdam, Hol. (1632-1677).
- STALIN, Joseph Vissarionovich** (Iosif V. Dzhugashvili) (statesman); b. nr. Tiflis, Georgia, Rus. (1879-1953).
- STANISLAVSKI** (Konstantin Sergeevich Alekseev) (stage producer); b. Moscow, Rus. (1863-1938).
- STANLEY, Sir Henry Morton** (John Rowlands) (explorer); b. Denbigh, Wales (1841-1904).
- STEIN, Gertrude** (author); b. Allegheny, Pa. (1874-1946).
- STEINMETZ, Charles Proteus** (engineer); b. Breslau, Ger. (1865-1923).
- STENDHAL** (Marie Henri Beyle) (novelist); b. Grenoble, Fr. (1783-1842).
- STERNE, Laurence** (novelist); b. Clonmel, Ire. (1713-1768).
- STEVENSON, Robert Louis Balfour** (novelist & poet); b. Edinburgh, Scot. (1850-1894).
- STOKES, Thomas Lunsford, Jr.** (journalist); b. Atlanta, Ga. (1898-1958).
- STONE, Lucy** (woman suffragist); b. nr. West Brookfield, Mass. (1818-1893).
- STOWE, Harriet Elizabeth** (nee Beecher) (novelist); b. Litchfield, Connecticut (1811-1896).
- STRADIVARI, Antonio** (violinmaker); b. Cremona, It. (1644-1737).
- STRAUSS, Oskar** (composer); b. Vienna, Aus. (1870-1954).
- STRAUSS, Johann** (composer); b. Vienna, Aus. (1825-1899).
- STRAUSS, Richard** (composer); b. Munich, Ger. (1864-1949).
- STUART, Gilbert Charles** (painter); b. Rhode Island (1755-1828).
- STUYVESANT, Peter** (Governor of New Amsterdam); b. W. Friesland, Neth. (1592-1672).
- SULLIVAN, Sir Arthur Seymour** (composer); b. London, Eng. (1842-1900).
- SULLIVAN, Francis L.** (actor); b. London, Eng. (1903-1956).
- SULLIVAN, John Lawrence** (boxer); b. Boston, Mass. (1858-1918).
- SUN Yat-Sen** (statesman); b. nr. Macao, China (1866-1925).
- SWIFT, Jonathan** (satirist); b. Dublin, Ire. (1667-1745).
- SWINBURNE, Algernon Charles** (poet); b. London, Eng. (1837-1909).
- SWOPE, Herbert Bayard** (journalist); b. St. Louis, Mo. (1882-1958).
- SYNGE, John Millington** (dramatist); b. nr. Dublin, Ire. (1871-1909).
- TAFT, Robert Alphonso** (legislator); b. Cincinnati, Ohio (1889-1953).
- TAGORE, Sir Rabindranath** (poet); b. Calcutta, India (1861-1941).
- TALLEYRAND-PÉRIGORD, Charles Maurice de** (statesman); b. Paris, Fr. (1754-1838).
- TAMERLANE** (Timur) (Mongol conqueror); b. nr. Samarkand, Sib. (1336?-1405).
- TARKINGTON, Newton Booth** (novelist); b. Indianapolis, Ind. (1869-1946).
- TCHAIKOVSKY** (or TSCHAIKOWSKY), Peter (Pëtr) Illich (composer); b. Ural region, Rus. (1840-1893).
- TECUMSEH** (Shawnee Indian chief); b. nr. Springfield, Ohio (1768?-1813).
- TENNYSON, Alfred** (1st Baron Tennyson) (poet); b. Somersby, Lincs., Eng. (1809-1892).
- TERRY, Ellen Alicia** (actress); b. Coventry, Eng. (1848-1928).
- TETRAZZINI, Luisa** (soprano); b. Florence, It. (1871-1940).

- ZOLA, Émile** (novelist); b. Paris, Fr. (1840-1902).
- ZOROASTER** (religious leader); b. Persia (lived about the 6th century B.C.).

PARLIAMENTARY PROCEDURE

by

Dan Golenpaul

Parliamentary procedures are rules for the conduct of a meeting in an orderly and democratic manner. Their purpose is to ensure the rule by a majority and to protect the rights of all members of an organization or assembly in meetings and in connection with all activities of the organization. The application of parliamentary rules is solely for this purpose.

Very often, though, individuals employ the rules for a contest of wits. This practice can be interesting and the life of the meeting, but it can also be a nuisance and a field day for parliamentary pests. The degree to which this activity may be tolerated should be dictated by circumstances. A certain amount of indulgence may be necessary because it is part of the game and is inevitably an expression of many egos that meet in a group.

Under no circumstances, however, should a chairman or members permit anyone to use the rules of procedure to trick and confuse members or to impede the function of a meeting. To prevent these occurrences, a knowledge of parliamentary rules is important. We will do our best in the limited space permitted to impart a little learning. (But remember, a little learning is a dangerous thing.) What we are setting forth here should be adequate to take care of most situations in organizations made up of friendly people who want to conduct their business in an orderly, friendly manner.

If it is necessary for you to be a member of a group that is involved in bitter conflicts, then we advise that you go to more technical and authoritative works on parliamentary procedure such as *Robert's Rules of Order*, *Cushing's Manual*, *Sturgis' Standard Code of Parliamentary Procedure* and others. We also suggest that you go to the meetings with a good lawyer and a baseball bat.

HOW TO FORM AN ORGANIZATION

People form or join organizations because they have a common interest or purpose that can best be advanced and attained through group activity. Whether the character of the organization be social, political, educational, communal, fraternal or athletic, its purpose and government are usually expressed in by-laws. They are not required to be elaborate, technical or legal.

BY-LAWS

By-laws should simply state the objects of the organization, the rights and duties of members, the qualifications of members, the number required to constitute a quorum, the dues, the necessary governing officers and how they should be elected, their terms of office, when meetings should be held and where, the order of business and, in the case of large and impersonal organizations, an authority for settling parliamentary disputes. (An organization usually adopts as its guide such works as mentioned heretofore.)

FIRST MEETING

At the first meeting of a group, temporary officers are chosen: a chairman, a secretary and a committee to prepare a draft of by-laws. The meeting is called to order by the member of the group who has assumed the leadership in the formation of the organization. He or she opens the meeting by the simple statement: "I now call the meeting to order," and asks the members to make nominations for chairman. When this announcement is made, members may ask for the floor by raising their hands, and, when recognized, offer a name in nomination. The person presiding can be nominated as can any other member present. Nominations require no seconding. A majority vote is necessary for the election of the chairman. The same procedure is required for the secretary and committee on by-laws.

The officers selected at the first meeting may serve until the next meeting or for a limited period, to be decided by a majority vote of the members present.

SECOND MEETING

At the second meeting, the report of the committee on by-laws is presented to the membership. The entire report may be accepted by a motion to adopt the report. A two-thirds vote is required. If the entire report is not acceptable to the membership, each provision may be considered separately; consideration consists of debating, amending, accepting or rejecting. The vote required on each provision is two-thirds of the membership present instead of the usual majority. Because by-laws are the fundamental basis of the organization, they should be acceptable to as many members as possible.

By-laws can be amended at any time during the life of the organization. Any proposals for changes in the by-laws require prior notice in writing to the entire membership before acting upon the proposed amendments at any meeting.

ELECTION OF OFFICERS

With the adoption of the by-laws providing for the type of officers for the organization, and the length of their terms, the organization proceeds to elect such officers. The usual officers for most groups are a president, vice-president, recording secretary, corresponding secretary, treasurer, sergeant at arms, and committees. Some have an executive secretary, a paid job, but an organization would have to be large to warrant a paid official.

All members are eligible for office when an organization is first formed. But later the by-laws may require a certain minimum period of membership as a qualification to hold office. Nominations are made by the simple statement: "I nominate so-and-so." The nominations do not require a second and a majority vote is necessary for election.

DUTIES OF OFFICERS

President: The president, as in government, is top man in an organization. Some organizations call this official "chairman." President sounds better, and is more appropriate when he performs not only the functions of presiding at meetings, but other duties in directing the organization. Chairman is the proper designation for one elected only to preside at a meeting.

Their duties as presiding officers are identical, regardless of title; they call the meeting to order, then present the order of business which the meeting is to act upon. They recognize members who desire the floor for a proposal or a discussion. They are supposed to see that everyone who wishes to speak has the opportunity, and to do as little talking themselves as possible. The presiding officer has the right to take part in a discussion. When he does, the vice-chairman should take the chair until the presiding officer has concluded his talk.

A chairman is really a moderator who directs, controls and regulates proceedings. He is neither a boss nor an antagonist and is not to be regarded as such by the members. It is the chairman's primary job to keep the meetings moving smoothly. He should prevent members from abusing their privileges without interference, but should not curb their rights. The chairman must entertain all motions that are seconded and must restate them for the members. He must call for a vote on motions and declare the motion adopted or defeated on the basis of the vote. He should allow for a re-count or a roll call whenever requested to do so. When referring to himself, the presiding officer usually says: "The chair recognizes Mr. Blank" instead of "I recognize Mr. Blank."

The president or permanent chairman is usually an ex-officio member of all committees. Although he is not obligated to attend all meetings, he may if he so desires.

Secretary: The duties of a secretary are to keep the records of the organization, to record the minutes of the meetings, to handle the correspondence (unless the organization is large enough to require a corresponding secretary), such as notifying members of regular meetings or of a special meeting, reading the minutes at the meeting, etc.

The minutes of a secretary should indicate when the meeting was held, where it took place, who presided, what business was transacted, when the meeting adjourned, etc.

Treasurer: The treasurer's duties are to handle the funds of the organization, to collect the dues, to pay the bills when

authorized, to keep the books for the organization with records of income and expenditures, and to render reports on finances at the regular meetings.

Sergeant-at-Arms: The duties of the sergeant-at-arms are to assist the chairman in preserving order among the people present at a meeting, members and visitors, to act as a sort of usher by checking people at the door to see that only those entitled to be present at the meeting are admitted, and to escort anyone out if requested to do so by the chairman.

COMMITTEES

The purpose of committees is to expedite the transaction of business on matters that require more time than the meeting permits, or on matters that require time for investigation and special study. Committees are essential in a large organization, but are really not necessary for a small group that can handle its limited business at the regular membership meetings.

The types of committee may vary according to the needs of an organization. A "standing" committee has a fixed term of office and gives continuous service. A "special" committee serves temporarily to investigate and report on some special project or condition.

The top committee in most organizations is the executive committee, sometimes made up of the chairmen of the various committees, sometimes selected from the general membership. Other committees are: membership committees, athletic committees, education committees, social or house committees, committees on finance, temporary committees to deal with a temporary specific problem, etc.

Committees may be appointed by the presiding officer, or be elected by the group, depending upon the by-laws. We think it best for committees to be elected by the membership. The chairman of the committee is either designated by the presiding officer, elected by the committee, or is the person obtaining the most votes in the election. Committees should consist of an odd number of members to assure a majority vote and a minimum of stalemates. As far as possible, the by-laws governing

the conduct of a meeting or organization govern the committees as well.

Most committees are usually made up of small groups and, therefore, their meetings are less formal than regular organization meetings. Motions do not require seconding, speeches are not as restricted and limited, and the chairman attending the committee, or the president of the organization, if attending the committee meeting, participates in the discussions on a par with the other members.

Providing for numerous officers is a good thing because it distributes responsibility among more members. This is important to keep in mind in connection with committees; while good people should be placed on many committees, it is best and advisable to have as many members on committees as possible.

The committee chairman reports for the committee to the general membership meeting. Reports of the committee may consist only of information requiring no action or may contain recommendations for certain action which is often the equivalent of a proposed motion.

When there is a difference of opinion among committee members, the majority report offered is considered the committee report. The dissenting members have the right, however, to submit a minority report proposing a different course of action. Both reports must be heard or read at the same meeting. No action on the majority report is in order until the minority report is disposed of. It can be disposed of in either of two ways. (a) Any member may object to consideration of the minority report and such objection must be voted on immediately without debate. If carried, the minority report is dropped. (b) If the objection to consideration is not upheld, then a motion to substitute the minority report for the majority report is in order. If this motion is carried, the majority report is eliminated and the minority report becomes the committee report and is the only report before the body. If the motion to substitute is not carried, then the meeting proceeds to deal with the majority report.

It is well to bear in mind that any report or motion belongs to the membership.

If they are not satisfied with either report, they can dissolve the committee and act directly from the floor or appoint a new committee.

The chairman of the committee calls the meetings of the committee. If he fails or refuses to do so, or if he is absent, any two members of the committee may call a meeting. The chairman of a committee usually acts as its secretary.

If a committee fails to render a report on a matter referred to it within a reasonable time, the membership may force it to do so by drawing up a petition bearing the number of signatures required in the by-laws. This is called **discharging a committee**.

ORDER OF BUSINESS

The chairman calls the meeting to order. He must determine whether a quorum is present. The number of members required to constitute a quorum is stipulated in the by-laws, usually one more than half of the membership, or as low as one-tenth of the membership. Without a quorum, business cannot be legally conducted. The secretary reads the minutes of the previous meeting and they are adopted, perhaps with corrections, or as read. Officers and committees make any reports they have. Old business left over from the previous meeting is transacted. New business is brought up, discussed and acted upon. At the close, the chairman says that he will entertain a motion for adjournment.

RULES OF DEBATE

The presiding officers should first recognize the mover of a proposal, or the member of a committee presenting a report, and should try to alternate recognition between those favoring and those opposing a proposition. Any member is entitled to speak on the main question and on each amendment as presented. He must confine himself to the question under consideration, must avoid personalities, and must not accuse others of ill motives. In some groups the by-laws limit each speaker to a fixed number of minutes. The meeting may vote to extend the time of a speaker if it so desires. Debate can only be halted by a motion for the previous question and a two-thirds vote is required.

VOTING RULES

There are several methods of taking a vote. The simplest is by voice—"ayes" and "noes." This may be challenged by any member who thinks that the chairman did not hear correctly, in which case the vote is taken by a show of hands, or by standing. Roll call votes, recorded by the secretary, are required in some instances. The closed ballot (written votes) also is commonly used, especially in the election of officers. Only attending members may vote, unless the by-laws specifically permit proxy voting. A tie vote defeats a motion. The chairman is allowed to break a tie, though, if he has not previously voted. Some organizations permit a chairman to vote only in case of a tie, while others allow him to vote as a regular member.

A majority vote is generally required to pass ordinary motions or to adopt ordinary actions. There are certain motions which require a two-thirds vote of those present. These generally include the following: amendments to the by-laws, to take up a question out of its proper order, to suspend the rules, to support an objection to the consideration of a question, to take up the previous question, to limit debate, to expel a member or officer, to discharge a committee, or to refer back to a committee. No vote can be made unanimous if even one member present objects.

WHAT HAPPENS TO A MOTION

A motion is a proposal for action by an organization. It is made by any member who asks the chair for the floor and is properly recognized. Most motions require a second before being placed before the group. Not more than one main motion may be considered at a time. The procedure is simple. One merely says, "I move the following." The chairman then asks if anyone seconds the motion. If it is properly seconded, the chairman announces that a motion has been made and seconded, calls for a discussion and repeats the motion on request. A motion may be voted on without discussion, but discussion is required if requested by any member.

A motion causes many things to happen. It provokes debate, suggests modifications,

clarifies the thinking and expresses the will of the group on a question. Once a motion is presented to the membership, it belongs to them to treat and dispose of in any one of several ways and can only be withdrawn with the consent of the membership.

A motion may be amended. This means that the motion may be modified or qualified by adding, substituting, or eliminating words or whole paragraphs. These changes must be relevant to the main motion.

For example, a motion is made for the organization to publish a magazine and stipulates (a) the publication to be a monthly, (b) to have two editors, (c) to cost the members \$1.00 a year, etc. This motion may be amended as follows: (a) to substitute "weekly" for "monthly," (b) to provide salaries for the two editors, (c) to eliminate the dollar charge for the magazine. All these amendments are in order because while the original motion has been amplified or qualified by the amendments, the proposal for publishing a magazine still prevails.

Amendments that are irrelevant are not permissible, such as an amendment requiring the editors to watch television. This is improper (perhaps for other reasons) because it is extraneous to the main question of proposing the publication of a magazine.

Amendments that negate the purpose of the motion, such as a proposal that the organization should not publish a magazine, are out of order because if the membership is entirely opposed to the idea, it can vote against the main motion or dismiss it in other parliamentary ways.

Other important rules governing amendments are:

1. There is no limit to the number of amendments that may be offered, but each amendment must be disposed of before a new one may be proposed.

2. After all amendments have been acted on, the meeting votes on the main motion, and all of the adopted amendments are incorporated in the main motion.

3. All amendments require a majority vote for passage.

4. A rejected amendment may not be resubmitted in identical form and no amend-

ment may be offered reversing an amendment previously adopted.

This is not all that can happen to a motion. In addition to amendments to the motion, you are also permitted to make amendments to the amendments. For example, the original motion stipulates that the magazine should have two editors. An amendment provides that the editors be paid salaries. This amendment can be amended to provide what the salary should be.

Now, if you are thinking of whether you can amend the amendment to the amendment, the answer is "No." Although this has really gone far enough, there is something else you are allowed to do, for better or worse, and that is to introduce a substitute for the motion itself or for any of the amendments or for everything that has been proposed on the question. The substitute for an amendment does not modify the amendment, but replaces it and is subject to the same rules that apply to amendments.

When amendments pile up to the point of confusing the membership, resorting to a substitute for the entire proposition may be helpful. The best way to do this, under the circumstances, is for someone to move to have a special committee designated to prepare a substitute motion for the whole.

If the motion is adopted, the committee-elect should withdraw from the meeting to try to reconcile any contradictions contained in the motion or the amendments. It should bring forth a clear substitute that expresses the intentions of most of the proposals.

Let us not lose sight of the fact that the purpose of a motion is not to create an endless chain of acts, but to get something done. In this connection, it is well to bear in mind that the motion and amendments do not necessarily conflict and that the proposer of a motion may accept the amendments without discussion or vote.

Motions that cannot be amended: These include such motions as questions of order or appeal, objections to consideration of the question, or motions to adjourn, to call for the order of the day, to vote, to withdraw a motion, to take up a question out

of proper order, to suspend the rules, to table, to take from the table, to reconsider, to consider the previous question, to postpone indefinitely, to amend an amendment, or to nominate. Motions to postpone indefinitely, to limit debate, or to recess can be amended as to time only.

DELAYING OR CANCELING CONSIDERATION OF A MOTION

It is not binding on a meeting to deal with a motion at the time it is proposed. On the contrary, the membership has the choice of postponing or renewing consideration of a motion. Here are some of the ways to attain such objectives.

Objection to consideration: Consideration of any issue may be stopped before discussion begins on the question, even though it involves interrupting the speaker, by objecting to its consideration. This objection may be made by any member and does not require a second. Objection to consideration calls for an immediate vote without debate or amendment and requires a two-thirds vote. If carried, the motion is dropped for all time. The purpose of the act is to prevent the meeting from dealing with a question that may be offensive. This reason should be primary. Other reasons may be that it might waste the time of the meeting or it may be inappropriate to deal with the question at the time. This action is very drastic and should not be employed to gag any member except the village idiot at his worst.

Motion to postpone indefinitely: This is a polite way of killing a motion, at least for the moment. It differs from "Objection to consideration" insofar as the motion to postpone indefinitely and the motion itself are debatable and cannot be made while a member has the floor. This motion requires a second and calls for a majority vote. It cannot be amended and cannot be brought up again.

Motion to "lay on the table": If the meeting does not want to consider the motion at all, the procedure is to make a motion to "lay the question on the table." This suspends consideration of the main motion and amendments until such time

as the group chooses to take it up again, which can be later at the same meeting after other business has been transacted or at any subsequent meeting. This motion must be seconded, requires a majority vote, may not be debated or amended or postponed. The only way to bring the motion back is to move to "take it off the table."

Motion to postpone to a definite date: This is an expression of the will of the meeting to put off consideration of the proposal until later in the same session or until a subsequent meeting. The object of such an act is to delay consideration of the question until more members are present, or to enable members to acquire further information before making their decisions. This motion is debatable only as to the advisability of postponement. The subject matter of the motion is not debatable. It is open for amendment as to time only and requires a majority vote.

Motion to refer to a committee: This is usually done if a meeting feels that a question requires more time and information before it acts upon it. A motion to refer to a committee names an existing committee or creates a special committee for its consideration and may be accompanied by instructions. Seconding and a majority vote are required for passage of this motion. It can be debated only as to the desirability and advisability of referring it to the committee. It can be amended only as to the nature of the committee and as to the instructions.

HOW TO REOPEN A QUESTION

To avoid finality of decisions that may be harmful to the best interests of the members, certain actions previously taken by the members are subject to review by them. Such review may apply to matters acted upon, matters postponed, or matters delegated to committees.

Motion to reconsider: This deals with something acted upon by a meeting which the members would like to reconsider at another time during the same meeting. It is a motion that should be made by one who has voted with the majority, whether in the affirmative or the negative, and is

made because the voter has changed his mind on the matter in the light of new information. Very often a member deliberately votes for or against motions so that he can move for reconsideration of the subject later in the meeting when there may be a better chance for passing or defeating the motion because more members are present, or because he will have an opportunity to persuade other members to change their votes. This is both good parliamentary procedure and democratic.

A motion to reconsider requires a second, a majority vote, is debatable and cannot be renewed. If a motion to reconsider is carried, the question is before the assembly with its original parliamentary status. Motions that cannot be reconsidered include: motions to take from the table, to lay on the table, or a motion for indefinite postponement that has been defeated.

To take from the table: This motion allows a group to take up a subject that was set aside by a motion to table it at a previous meeting. This resumption of consideration on a question rates priority over any new motions and can be introduced when there is no other business before the body. Motion to take a question from the table requires a second and a majority vote, is not debatable and cannot be amended.

A motion to rescind: This motion enables the membership to re-evaluate some action taken in the past because it may have been adopted without full understanding of the consequences at that time. The point of rescinding a previous act of an organization does not apply to any legally binding act committing the organization, nor to the election of members or officers. This motion calls for a second and majority vote unless the original motion involved required a two-thirds vote. It is debatable and cannot be amended.

Several important techniques for keeping informed about proceedings, preventing violations and protecting the rights of members, correcting errors, and expediting the business at hand, are:

Moving the Previous Question: This asks that the discussion be stopped at once on any motion before the body. A move for the previous question cannot interrupt the speaker. It requires a second, is not de-

batable, cannot be amended, and requires a two-thirds vote. Its purpose is to say "Let's stop talking and vote."

Point of Information: This is a method of obtaining information about what is occurring through the medium of the chairman or the speaker. This interruption request is permissible even when one is speaking. It is unusual for the speaker or the chair to ignore such a request. Since it is intended only to secure information, it is not proper to use this as a device to make a statement or delay proceedings.

Point of Order: This questions the correctness of any action at the time it occurs. The only time that a point of order can be employed *after* an action has taken place is if it involves a violation of by-laws, constitution, or the law. It is raised on the basis of a mistake or omission in procedure, of a violation of the rules of the organization, of decorum in debate, or of irrelevancy of debate and procedure. A point of order needs no seconding, cannot be amended and requires no vote.

A point of order may be raised by any member at any time. It is in the nature of a demand addressed to the chair, which is required to act immediately on the point of order raised. The procedure is as follows: A member announces, "I rise to a point of order." This automatically halts any discussion or action until the chairman rules on the point of order. If the chairman concurs, he announces that the point of order was well taken, and proceeds to correct whatever is in question.

Appeal: If any other member takes exception to this ruling, he may appeal from the decision of the chair. Another basis for an appeal may result when the chair declares the point of order not well taken. This appeal is usually made by the person raising the point of order. All appeals require a second, are debatable and are subject to a majority vote of the membership. If they vote for the appeal, the chairman's decision is reversed. If they vote against the appeal, the chairman's decision is upheld. In the event of a tie vote, the chairman is sustained. If the chairman is a member of the organization, he has the right to vote and may make the tie.

Discussions on some appeals are not customary, such as questions of indecorum, violation of rules of speaking, or order of business.

Sometimes the chairman is in doubt on a point of order. When he is, he may defer to someone present for advice, or ask the members to discuss and vote on the point of order. This is the only time that a point of order is debatable. Their vote determines the chairman's decision.

Motion to adjourn: This motion is in order at any time, but should be employed with discretion. Obviously, it should not interfere with the organization's efforts to get business done. This motion requires a second, is not debatable, cannot be amended, and must be voted on immediately. A majority vote is necessary. Any motion for adjournment that refers to a specific time or place for the next meeting is subject to debate and amendment.

We have tried to project the reader into actual participation in the forming of an organization and the conduct of a meeting, and we have given more attention to the processes than to the discussion of technical rules. In following this course, we may have omitted some matters that do not occur at every meeting, but that do happen occasionally and should be understood.

Removal of officers: This is sometimes an unhappy necessity. Misconduct of an officer may involve neglect of duties, abuse of privileges, or incompetence. The removal of an officer is accomplished by preferring charges which should be of a serious nature and supported by proof. The charges may be considered at a general meeting or referred to a committee to investigate and to recommend a course of action. A two-thirds vote of the members present is required to remove an officer. A motion to remove an officer is debatable.

Expulsion of members: If a member violates his obligations and duties or is involved in an act that may bring disrepute to the organization, he is subject to charges and a hearing before a committee or the membership and can be expelled by a two-thirds vote. This action is debatable. Obviously, such actions should not be undertaken unless the charges are serious and

supported by substantial proof. It would be deplorable if the exercise of such a drastic action were based on a frivolous issue or personal bias. Sometimes the behavior of a member at a meeting requires disciplinary action in the form of a motion for immediate expulsion. This is not debatable and requires a two-thirds vote.

Question of privilege: A member may interrupt a meeting at any time to raise a question involving the comfort or convenience of the membership. It may concern such matters as the physical condition of the meeting hall, the seating of the members, the conduct of persons present, or the ability to hear speakers. This request requires no second, is not debatable, cannot be amended and is decided by the chair.

Suspension of the rules: The object of a proposal to suspend the rules is to permit a meeting to do something that is ordinarily prohibited by the rules of parliamentary procedure or by the adopted order of business. The suspension of rules is generally employed to deal with an emergency or special condition, such as permitting a guest speaker to start earlier than scheduled or allowing for the interruption of the regular order of business by a visiting committee. There are other circumstances under which the suspension of rules is permitted, but these cases are too complicated to be treated here. This motion cannot interrupt a speaker, requires a second, cannot be debated or amended, and requires a two-thirds vote.

We have endeavored to outline some of the basic rules for the benefit of the many people who want some simple knowledge of how to form an organization, how to conduct a meeting, or how to participate in one; also to help spectators at a convention understand what is going on. Beyond this, we refer you to the authorities on parliamentary procedure.

However important rules are for guidance in most human activities, there is no doubt that much is accomplished through informal discussion and action, and we do not hesitate to urge small friendly groups to do their business with as little formality and as few restrictions as possible. If this does not always work, we hope our book is there to serve you.

CROSSWORD PUZZLE GUIDE

Since many persons who can read and write occasionally or frequently indulge in the indoor pastime of working crossword puzzles, this section is offered as a handy help to solvers who may be stumped for a two-letter word meaning "three-toed sloth" or a three-letter word meaning "native of Mindanao."

We have those two words here, and plenty more. We have the Greek, Roman, Norse and Egyptian deities of myth and legend. And we have those "Greek letters" and "months of the Jewish year" so often needed to fill out little gaps.

The reader is warned that in mythology there are many confusing and even conflicting accounts of the identities and adventures of the various gods, goddesses and lesser figures. There is also considerable variation in the spelling of names, places and things. For instance, you may spell it ICON, IKON or EIKON, and similar options are plentiful all along the crossword line. If the reader will keep further possible variations in mind, it may help at a critical point.

Various other sections of our book will be found of use to the crossword puzzler—especially the section of world geography and statistics. See Geography in the index.

First Aid to Crossword Puzzlers

(We cannot, of course, begin to list all the odd words you will meet with in your daily and Sunday crossword puzzles, for such words run into many thousands. But we have tried to include those which turn up most frequently, as well as many others which should be of help to you when you are unable to go any further.)

Also, we do not guarantee that the definitions in your puzzle will be exactly the same as ours, although we have checked every word with a standard dictionary and have followed its definition.

In nearly every case, we have used as the key word the principal noun of the definition, rather than any adjective, adjective phrase, or noun used as an adjective. And, to simplify your searching, we have grouped the words according to the number of spaces you have to fill.)

VALI: Odin's son; Ragnarok survivor.

VALKYRIES: Virgins, messengers of Odin, who selected heroes to die in battle and took them to Valhalla; generally considered as nine in number.

VANIR: Early race of gods; three survivors, Njorth, Frey, and Freya, are associated with Aesir.

VE: Brother of Odin; one of creators of world.

VERTHANDI: See Norns.

VILI: Brother of Odin; one of creators of world.

VINGOLF: Abode of goddesses in Asgard.

VITHARR (Vithar): Son of Odin; survivor of Ragnarok.

VOLSUNG: Descendant of Odin, and

father of Signy, Sigmund; his descendants were called Volsungs.

YGGDRASIL: Giant ash tree springing from body of Ymir and supporting universe; its roots extended to Asgard, Jotunheim, and Nifheim.

YMR (Ymer): Primeval frost giant killed by Odin, Vili, and Ve; world created from his body; also, from his body sprang Yggdrasil.

Egyptian Mythology

AARU: Abode of the blessed dead.

AMEN (Amon, Ammon): One of chief Theban deities; united with sun god under form of Amen-Ra.

AMENTI: Region of dead where souls were judged by Osiris.

ANUBIS: Guide of souls to Amenti; son of Osiris; jackal-headed.

APIS: Sacred bull, an embodiment of Ptah; identified with Osiris as Osiris-Apis or Serapis.

GEB (Keb, Seb): Earth god; father of Osiris; represented with goose on head.

HATHOR (Athor): Goddess of love and mirth; cow-headed.

HORUS: God of day; son of Osiris and Isis; hawk-headed.

ISIS: Goddess of motherhood and fertility; sister and wife of Osiris.

KHEPERA: God of morning sun.

KHNEMU (Khnum, Chnuphis, Chnemu, Chnum): Ram-headed god.

KHONSU (Khensu, Khuns): Son of Amen and Mut.

MENTU (Ment): Solar deity, sometimes considered god of war; falcon-headed.

MIN (Khem, Chem): Principle of physical life.

MUT (Maut): Wife of Amen.

NEPHTHYS: Goddess of the dead; sister and wife of Set.

NU: Chaos from which world was created, personified as a god.

NUT: Goddess of heavens; consort of Geb.

OSIRIS: God of underworld and judge of dead; son of Geb and Nut.

PTAH (Phtha): Chief deity of Memphis.

RA: God of the Sun, the supreme god; son of Nut; Pharaohs claimed descent from him; represented as lion, cat, or falcon.

SERAPIS: God uniting attributes of Osiris and Apis.

SET (Seth): God of darkness or evil; brother and enemy of Osiris.

SHU: Solar deity; son of Ra and Hathor.

TEM (Atmu, Atum, Tum): Solar deity.

THOTH (Dhouti): God of wisdom and magic; scribe of gods; ibis-headed.

Mason and Dixon's Line

Mason and Dixon's Line (often called the Mason-Dixon Line) is the boundary between Pennsylvania and Maryland, running at a north latitude of 39°43'19.11". The greater part of it was surveyed from 1763-67 by Charles Mason and Jeremiah

Dixon, English astronomers who had been appointed to settle a dispute between the colonies. As the line was partly the boundary between the free and the slave states, it has come to signify the division between the North and the South.

New and Newly Important Words and Meanings

Note: This is a selected list of words, from a wide variety of subject areas, that have become of fairly recent general interest. Many, as *radar*, *colorcast*, and *dynel*, are new in the sense that they were recently introduced into the language. Some, as *omnibus*, *libretto*, and *alligator*, are recently acquired new or extended senses of well-established terms. Others, as *rocket ship*, *snollygoster* and *fission*, are terms that have been in limited use within certain circles for a considerable time but have only recently become generally used and known. It would be out of keeping with the spirit of a list like this and beyond the space available to treat the entries in formal dictionary fashion. In general, only the commonest spellings and the most basic and important of the new senses have been given.

- ABSTRACT:** Characterized by designs in which an artist, using lines or blocks of color rather than pictures of actual objects, attempts to set forth his feelings or ideas.
- ACETATE RAYON:** A rayon fiber made with cellulose acetate.
- ACK-ACK:** An anti-aircraft gun; also, the fire of such a gun.
- ACRONYM:** A word formed from the initial letters or the first and last syllables of the words in a compound (*jato* from *jet* assisted take-off; *motel* from *motorists' hotel*).
- ACTH:** A compound obtained from the pituitary gland, used especially in the treatment of arthritis.
- ACTINOMYCIN:** An antibiotic isolated from certain soil bacteria.
- ADDITIVE:** Any substance which, when added to another product, such as gasoline or a storage battery, is supposed to make it more powerful or longer-lasting.
- AEROEMBOLISM:** An abnormal bodily condition, called also *air bends*, due to the formation of nitrogen bubbles in the blood and spinal fluid brought about by rapid ascent into high altitudes.
- AGITPROP:** Serving as a means for spreading propaganda intended to promote militancy among the common people;—applied originally to pro-Communist activities.
- AIRLIFT:** A supply line operated by aircraft.
- AIRSTRIPE:** A hard-surfaced runway for the take-off and landing of aircraft; also, a portable runway made of steel sheets.
- ALCOMETER:** A device for detecting drunkenness by measuring the amount of alcohol in a sample of exhaled air.
- ALERT:** A signal to warn of danger, as from hostile aircraft; also, the period of time in which the signal is in effect.
- ALLIGATOR:** A flat-bottomed, armored military vehicle for use on land or water.
- ALL-OUT:** Making use of all available power and resources (as, an *all-out* effort).
- AMPLITUDE MODULATION or AM:** A system of radio broadcasting in which the amplitude of the carrier wave is modulated in accordance with the form of the sound or signal wave.
- AMTRAC:** An amphibious tractor, used chiefly as a military vehicle.
- ANGLE:** A special approach or technique for achieving an end, as for writing a news story or promoting an interest.
- ANTIBIOTIC:** A substance produced by a living organism, especially by a bacterium or fungus, that is used to kill or stop the growth of disease germs.
- ANTIHISTAMINE:** An agent used in the prevention or treatment of allergic reactions.
- AQUACADE:** An elaborate water show consisting of exhibitions of swimming, diving, and acrobatics, accompanied by music.
- ARENA THEATER = THEATRE-IN-THE-ROUND.**
- ARTIFICIAL INSEMINATION:** Introduction of semen into the genital tract of a female animal by other than the natural means.
- ASTRODOME:** A transparent dome on the upper surface of an airplane from which the navigator makes celestial observations.
- ATEBRIN:** An antimalarial drug, quinacrine dihydrochloride.
- ATOMIC BOMB, ATOM BOMB, or A-BOMB:** A bomb with violent explosive power that is due to a sudden release of atomic energy.
- ATOMIC COCKTAIL:** A radioactive substance such as sodium iodide, dissolved in water and given as a drink to cancer patients.
- AUDIO:** Pertaining to or used in the transmission or reception of sound in TV.

AUDIOPHILE: One who is enthusiastic about sound, especially music from high-fidelity broadcasts or recordings.

AUDIOVISUAL: Involving both hearing and seeing (as, *audiovisual* education uses films, slides, phonograph records, and the like, to supplement instruction).

AUREOMYCIN: An antibiotic isolated from a soil microorganism.

AUSTERITY: A severe or enforced economy characterized by a lack of luxuries (as, postwar *austerity* in Great Britain).

AUTOMATIC TRANSMISSION: Automotive transmission in which the gears are shifted automatically.

AUTOMATION: The substitution of machines or mechanical devices for human beings in a manufacturing process.

BABUSHKA: A triangular kerchief worn over the head and tied under the chin.

BABY SITTER: One who is hired, usually for a few hours, to care for children while the parents are absent from the home.

BALL-POINT PEN: A fountain pen in which the writing point is a tiny ball that rotates freely against an inking magazine.

BAMBOO CURTAIN: The military, political, and propaganda barrier isolating territory controlled by the Chinese Communists.

BANK: A place for storing a reserve supply;—occurs in such combinations as *blood bank*, *eye bank*, *bone bank*, *skin bank*.

BANKROLLER: One having a sizable bankroll or a ready and ample supply of funds.

BARBITURATE: One of a large group of drugs often used as sedatives or antispasmodics.

BARREL: To move at a high speed in a straight course;—used especially of vehicles.

BASIC ENGLISH: A copyrighted system intended to simplify the learning of English by the use of a vocabulary limited to the 850 most essential words.

BATHYTHERMOGRAPH: An instrument for recording the temperature variations of sea or fresh water according to depth.

BAZOOKA: A portable rocket-launcher, used chiefly as an antitank weapon.

BEACHHEAD: An area on an enemy shore which an advance force occupies and defends.

BEAM: A directional radio signal for guiding aircraft, audible as a continuous tone as long as the aircraft stays on course, but as a broken tone if it veers to the left or right.

BEBOP: A style of jazz with many notes to the measure, usually played loud and fast and characterized by changing of key and accenting of odd beats.

BELLYLAND: To land an airplane on the under side of its fuselage without using the landing gear.

BENTHOSCOPE: A steel sphere used for deep-sea diving and observation.

BETATRON: An apparatus in which electrons are accelerated to high speed and formed into beta rays for use in generating high-voltage X-rays or for nuclear bombardment.

BIG WHEEL, slang: An important, impressive person; sometimes one who only feels himself important.

BIKINI: A woman's two-piece bathing suit of abbreviated style.

BINAURAL SOUND: Sound recorded or transmitted by pairs of equipment in order to give the listener the effect of having heard the original with his own two ears.

BIOLOGICAL WARFARE: Warfare in which living organisms, especially disease germs, are used against human, animal, and plant life; also, warfare involving the use of synthetic chemicals against plants.

BIRD, slang: An enthusiast (as, a *bird* about music); also, any person thought to be odd or strange.

BITCH, slang: To gripe; to complain.

BLACK MARKET: Trade in violation of official controls or restrictions, especially those concerning price ceilings, rationing, and priorities; also, a market or group carrying on such trade.

BLISTER: A compartment, often covered by a transparent dome, that protrudes from the fuselage of an aircraft and is usually occupied by a gunner or observer.

BLITZ: A violent, swift military attack; also, any sudden, overpowering attack;—short for *blitzkrieg*.

BLOCKBUSTER: A huge, high-explosive demolition bomb, usually one weighing two, four, or six tons.

BLOODMOBILE: An automobile equipped for collecting blood from volunteer donors.

BLUEPRINT: A detailed plan for a project or program of action (as, a *blueprint* for mobilization).

BLUE RIBBON JURY: A panel of jurors selected for qualifications such as education or property ownership, that may be called to sit in complicated cases.

BOBBY SOCK: A girl's sock reaching above the ankle.

BOBBY SOXER: A young girl, especially one in the early teens;—from the wearing of bobby socks.

BOMB: A small container in which a liquid, as an insecticide, is held under pressure and released as a spray.

BOOBY TRAP: An explosive device concealed and attached to some harmless-looking object; also, any trap for the unsuspecting.

BOOGIE-WOOGIE: A style of playing blues on the piano, characterized by a persistent bass rhythm and elaborate treatments of a simple melody, often in contrary motion to the bass.

BOOKBURNING: Systematic destruction, usually by a government, of books believed to contain dangerous ideas; hence, the suppression of ideas.

BOOKMOBILE: A closed autotruck with shelves of books, which serves as a traveling library or bookstore.

BOOSTER: A device for strengthening radio or television signals in areas where the reception is weak.

BOP: Short for *bebop*; also, one fond of bebop.

BOTTLENECK: To delay progress; to hold up a process, especially at a critical point.

BOYS' TOWN: A farm or school for homeless or delinquent boys, organized like a town and governed by the boys themselves.

BRAINWASHING: The forcible replacement of one set of political ideas by another set, especially through indoctrination or mental torture.

BRASS: Military and naval officers of high rank or position, especially those in top commands.

BREAK: A short rest period, often one set aside from the working day.

BRIEF: To give final, last-minute instructions or information (as, to *brief* the crew of a bomber before a mission).

BROWNOUT: A dimming of street lights and various other outdoor lighting, chiefly to conserve fuel supplies.

BRUSHOFF: A curt or offhand dismissal (as, to give someone the *brushoff*).

BUDGIE: Short for *budgerigar*, the zebra parakeet.

BUILD-UP: Extremely favorable notice, as by the press or radio, designed to popularize a product, personality, or organization.

BUILT-IN: Functioning as a part of, but separately identifiable from, a given unit (as, *built-in* shelves); also, conditioned (as, a *built-in* reaction).

BULLDOZER: A tractor-driven machine with a broad, blunt horizontal blade or ram, used especially in road building and clearing land.

BUMP: To push (a person) out of his place in order to take it for oneself (as, to *bump* a man from his job).

BURGER: A sandwich usually made of a flat roll cut in half and filled either with hamburger or another food specified (as, *pork-burger* or *beefburger*).

BURP GUN: A machine pistol.

BUTADIENE: A colorless gas, made from petroleum and alcohol, used in the making of synthetic rubber.

BUY, slang: To accept; to agree to; to assent (as, to *buy* an idea or an argument).

BUZZ: To fly an airplane fast and at a low altitude over (as, to *buzz* an airfield).

CABANA: A beach shelter resembling a cabin, usually with an open side facing the sea.

CADRE: A nucleus of thoroughly indoctrinated leaders who actively promote the interests of a communist or revolutionary party.

CAFÉ CURTAINS: Plain, straight-hanging curtains, usually hung on poles by loops or rings, used to cover the lower part of a window or door.

CAFÉ SOCIETY: People who frequent fashionable cafés and night clubs.

CALYPSO: A ballad in African rhythm, often a parody or a satire on current events, sung especially by natives of the British West Indies as part of a pre-Lenten carnival.

CANDID CAMERA: A camera, usually a small one with a fast lens, used for taking unposed, informal pictures, usually without the subject's knowledge.

CANNIBALIZE: To dismantle a machine in order to get parts for use as replacements in other machines.

CAPSULE: Of a small type or in a condensed or streamlined form (as, a *capsule* review, criticism, or submarine).

CAPTIVE AUDIENCE: An audience obliged to stay within hearing of a speech or broadcast, often being subjected to advertising or propaganda.

CARD-CARRYING MEMBER: A Communist to whom a party membership card has been issued and who presumably carries it on his person.

CARHOP: A waiter or waitress at a drive-in restaurant who serves food and drinks to customers in their parked cars.

CARPORT: A roofed shelter for an automobile, usually attached to another building, and with two or more open sides.

CARTRIDGE: A removable pickup in the tone arm of a phonograph.

CASUAL: Of clothing, designed in a simple, easy style suitable for informal or sports events.

CEILING: A maximum, as for a price, wage, fee, or rent, which is fixed as the upper legal limit by government authority, usually on the basis of the level prevailing at a certain date.

CERAMAL = CERMET.

CERMET: A strong, heat-resistant metallic alloy.

CHAIN REACTION: In chemistry and physics, a process which can continue itself because one of its resulting products is always able to start the process anew until the original material is used up.

CHALKBOARD: A smooth flat surface, often of slate or composition, for writing on with chalk.

CHALKTALK: A talk or lecture which the speaker illustrates by making drawings or cartoons as he talks.

CHANNEL: A narrow band of frequencies on which a radio or television program may be transmitted.

CHARACTER ASSASSINATION: The attempt to discredit or destroy the reputation of another person, often by making vague, unproved accusations.

CHEAP: Having a depreciated purchasing power or value, especially as the result of a currency inflation (as, *cheap* dollars).

CHEESECAKE: Photography or photographs intended to display or accent female charms or attractions; also, any photograph having a considerable amount of sex appeal.

CHICHI, slang: Stylish; chic; fashionable; also, affected or esoteric.

CHLORAMPHENICOL: An antibiotic effective against certain rickettsiae and viruses.

CHLORDANE or CHLORDAN: An odorless liquid insecticide.

CHORAL SPEAKING: Interpretive reading or recitation, usually of poetry or rhythmic prose, by a group of voices known as a *speech choir*.

CHOREOGRAPH: To compose and arrange a ballet or dance; also, to provide a subject or a piece of music with a ballet or dance.

CHOROSCRIP: A system of notation used in teaching and recording dance figures and steps.

CINCHER: A wide, snug-fitting ornamental belt for women.

CLASSIFIED: Forbidden to be revealed out-

side authorized circles, for reasons of national security.

CLOAK-AND-DAGGER: Of literature, dealing in intrigue and melodramatic action, usually of characters in a colorful historical setting, and involving espionage, duels, or the like.

CLOBBER, slang: To beat or pound mercilessly; also, to defeat overwhelmingly.

CLOSED CIRCUIT: Television transmission in which the signal is not broadcast but can be received only by interconnected receivers.

CLOUD CHAMBER: A closed vessel containing saturated water whose sudden expansion makes visible by a trail of white droplets the passage of an ionized particle.

CLOUD SEEDING: The introduction of a substance, as dry ice or silver iodide, into certain types of clouds in order to cause rainfall.

CLOVERLEAF: A road plan resembling a four-leaf clover, in which one road passes over another, permitting traffic to merge without left-hand or abrupt turns or direct crossings.

CLUTCH: A critical point; a pinch (as, to come through in the *clutch*).

CLUTCH BAG: A woman's purse or bag, usually small and without a handle, which is carried in the hand.

COAXIAL CABLE: A cable used in the transmission of telegraph, telephone, and television signals, consisting of a tube of conducting material surrounding but insulated from a central conductor.

COFFEE BREAK: A rest period during the working day, allowing the employee time for a cup of coffee.

COLD FRONT: In meteorology, the forward boundary of a mass of cold air.

COLD WAR: A struggle between two nations or groups of nations, waged by use of political and economic strategy, propaganda, and other measures short of armed combat.

COLD WAVE: In hairdressing, a permanent wave produced by a chemical solution.

COLLECTIVE SECURITY: Security of all the members of an association of nations from aggression by any other nation or nations.

COLORCAST: A television broadcast in color.

COMBO: A small group of musicians, usually jazz players;—from *combination*.

COMIC BOOK: A paper-bound book made up of a series of cartoons or comic strips, sometimes humorous, often telling a story of adventure or crime.

COMMANDO: A band or unit of troops specially trained for making surprise raids into enemy territory; also, a member of such a unit.

COMMERCIAL: That portion of a sponsored radio or television program devoted to advertising; also, the script prepared for the advertising announcement.

COMMIE: A member or agent of the Communist party; also, a fellow traveler.

COMPATIBLE: Designating a system in which color television broadcasts may also be received in black and white on receivers not specially equipped for color reception.

COMPOUND F: A hormone used in the treatment of arthritis.

CONDITIONER: A substance which, when added to soil, improves aeration, workability, and crop yield.

CONSCRIPT: To enroll by compulsion for military service.

CONTACT LENS: A lens of glass or plastic fitted to the eyeball, worn instead of the usual eyeglass to correct defects of vision.

CONTAINMENT: Restraint; specif., the restriction of Communism to fixed territorial limits.

CONTOUR FARMING: A system of farming in which plowing and planting follow the contour lines of sloping land, thus retarding erosion from the runoff of rainwater.

CONVERSATION PIECE: Any unusual or distinctive article, as of clothing or furniture, which is likely to attract attention and provide a subject for conversation.

CONVERTER: A device for adapting a television receiver to receive channels other than those for which it was designed.

CONVERTIPLANE: An aircraft that takes off and lands like a helicopter but flies like a conventional airplane.

COOKOUT: An outing at which a meal is cooked and eaten in the open.

CORN: Corny acting or playing.

CORNY: Trite, stale; old-fashioned, or contrived; also, of music, played or sung in a bland, unsophisticated style.

CORONARY THROMBOSIS: A blood clot (a *thrombus*) occurring in an artery of the heart.

CORTISONE: A compound used in treating rheumatoid arthritis and certain allergies.

COUNTER-INTELLIGENCE: Organized activities of military intelligence services designed to block enemy sources of information and deceive the enemy by ruses, misinformation, and the like.

COUNTERWORD: A word used in popular speech in such a variety of situations that its original, specific meaning is lost and it serves only as a counter or token used in place of a more definite word (examples: *swell, awful, nice*).

COURTESY CARD: An identification card which supposedly assures its holder of favors or special treatment, as from the police.

CRACK UP: To crash or cause to crash, as an airplane; hence, to break down; collapse; go to pieces.

CRASHLANDING: An airplane landing in which the plane is either damaged or destroyed.

CREDIT LINE: A line, note, or name published with an article, news story, photograph, or the like, acknowledging the source.

CREEPING: Making, or thought to be making, inroads of undesired progress (as, *creeping socialism*).

CREW CUT: A short-cropped, bristly haircut for men.

CURVACEOUS: Having a feminine figure which is well-proportioned and marked by pronounced curves.

CUTBACK: A reduction in a prevailing rate, amount, or number (as, a production *cut-back*).

- CYBERNETICS:** Comparative study of the control system in the human brain and nervous system with that in such mechanical-electrical communication systems as computing machines.
- CYCLOTRON:** An apparatus used for imparting high speeds to electrified particles, used especially to bombard the nuclei of atoms in order to produce transmutations and artificial radioactivity.
- DAISY:** A circular cheese, usually about 12 to 14 inches in diameter and weighing between 18 and 24 pounds.
- DDT:** A colorless, odorless insecticide, used especially against body lice, flies, mosquitoes, and agricultural pests.
- DEAD DUCK:** Anything doomed or past recovery.
- DEADPAN:** A completely expressionless, immobile face.
- DECAMISADO:** A member of the Argentine working class.
- DECONTROL:** To remove control from (as, to *decontrol* the price of eggs).
- DE-EMPHASIZE:** To diminish in importance; to make less prominent (as, a move to *de-emphasize* football at a college).
- DEEP-FREEZER:** A cabinet where food may be quick-frozen and stored.
- DEFICIT SPENDING:** Spending in excess of income;—usually applied to a government.
- DEGREE DAY:** A unit that represents one degree of declination from any given point in the mean outdoor temperature for a day, often used in measuring fuel requirements for a building.
- DE-ICER:** Any system or mechanism used to rid or keep free of ice the wings and tail of an aircraft.
- DELTA WING PLANE:** A fast, high-flying airplane, triangular in shape, like the Greek letter delta.
- DELTIOLGY:** The hobby of collecting post cards.
- DENAZIFY:** To rid (the people or institutions of a Nazified country) of Nazism and its influence.
- DESENSITIZE:** In psychiatry, to free from a neurotic state; to make immune to a morbid emotional domination.
- DETECTAPHONE:** A telephone apparatus equipped with a microphone transmitter, used especially for listening secretly.
- DETERGENT:** A soluble or liquid preparation, often called "soapless soap," that resembles soap in its ability to emulsify oils and hold dirt in suspension.
- DIAL TONE:** A steady hum, audible in a telephone receiver, indicating that the line is free and a number may be dialed.
- DILLY:** Something of superior or remarkable quality; often, something presenting unusual difficulties or complications.
- DIM OUT:** To obscure in dimness, as by restricting illumination to specks or slits of light, lights shaded from above, or blue lights.
- DIRECTIVE:** An order or instruction as to plan or procedure, such as might be issued by a military official, or by a government or business executive.
- DISC JOCKEY or DISK JOCKEY:** One who conducts and announces a program of musical records, usually with advertising or nonmusical comments interspersed.
- DISCOGRAPHY:** A descriptive, classified catalogue or listing of phonograph records usually including dates and performers.
- DISCOPHILE:** An enthusiastic collector or student of phonograph records.
- DISPLACED PERSON or DP:** A person driven or deported from his home country during World War II as a prisoner of war, or forced labor, or because of his race, politics, or religion.
- DOCUMENTARY:** A film that depicts in artistic form a factual and authentic presentation, as of an event or a social or cultural phenomenon.
- DOODLE:** An aimless, somewhat automatic design, sketch, or scribbling made while one's mind is occupied with something else.
- DOSIMETER:** A device for measuring the amount of radioactivity absorbed by the body.
- DOUBLE-DOME:** A highbrow; an intellectual.
- DOUBLE-TAKE:** A delayed reaction to the importance or meaning of something that at first escaped notice;—usually in the phrase, to do a *double-take*.
- DOUBLE TALK:** Talk or writing that appears to be earnest and meaningful but is actually a mixture of sense, gibberish, and unintelligible verbiage.
- DOUBLE-THINK:** The ability to have in mind at the same time two contradictory beliefs and accept both;—coined by George Orwell in the novel *Nineteen Eighty-Four*.
- DRIVE-IN:** A place of business, as a theater or restaurant, designed to permit patrons to remain in their automobiles while watching a performance or making purchases.
- DRONE:** A pilotless airplane controlled by radio from the ground or another plane; also, a vessel similarly controlled.
- DRUNKOMETER:** A device for detecting and measuring the degree of alcoholic intoxication by analysis of the breath.
- DUB:** To provide (a film) with a new soundtrack; to blend music or sound effects into (a radio or television broadcast).
- DUCK:** An amphibious military vehicle having wheels and a propeller, that can be used as either a truck or a barge.
- DYNEL:** A synthetic textile fiber in staple form; also, the material made from this fiber.
- EARMOLD:** The portion of a hearing aid that fits into the ear.
- ECDYSIAS:** A strip-teaser;—a humorous term coined by H. L. Mencken.
- EGGHEAD:** An intellectual; a highbrow.
- ELDER STATESMAN:** A man who has retired from active public life but continues to act as an unofficial advisor, especially to government officials.
- ELECTRONICS:** The branch of physics that deals with the emission, motion, and effects of electrons.
- ELECTROSHOCK:** A state of shock induced by the passage of an electric current through the brain and useful in the treatment of certain mental disorders.
- EMCEE:** A master of ceremonies;—from *M. C.*

ENRICH: To improve (a food) in nutritive value by adding vitamins and minerals to it during processing.

ESCALATOR CLAUSE: A clause in a contract providing adjustment to cover such possibilities as increases or decreases in costs of labor, material, or living.

ESCAPE LITERATURE: Literature or writing providing mental escape or distraction from routine or reality.

EXPEDITER: One whose job it is to ensure an adequate supply of raw materials for fulfilling production contracts and to direct the movement of processed goods to where they are needed or wanted.

EXPOSURE METER: An instrument used by photographers for indicating the correct amount of exposure under varying light conditions.

EXPRESSWAY: A superhighway.

FADE: In radio and television, to change gradually in loudness or distinctness (as, to *fade* a picture or a sound in or out).

FAIR-TRADE AGREEMENT: An agreement between the manufacturer and the distributor of a trade-marked article, prescribing a minimum price for its sale.

FALTBOAT: A collapsible boat similar in size and shape to a kayak.

FAST BUCK: Money that can be made readily or quickly, usually with little effort.

FEATHERBED RULE: A union rule that requires an employer to hire unneeded workmen or to pay for duplication of jobs; also, one limiting the amount of work that workmen may do in a day.

FEATHER MERCHANT, *slang*: One who tries for easy jobs or is thought to be lazy; also, *military slang*, a civilian.

FEATURETTE: A short feature; specif., a motion picture of less than the usual length.

FEEDBACK: A partial return of the effects or product of a process to its source or to a preceding stage;—used especially of social, psychological, or biological systems.

FELLOW TRAVELER: One who sympathizes with and, often, furthers the program or ideals of, a group (originally, the Communist party) without being a member of the group.

FIFTH COLUMN: Secret supporters of an enemy engaged in sabotage or other subversive activity within defense lines.

FINGER PAINTING: A technique in which splashes of pigments (*finger paints*) are applied to wet paper and spread with the hands or fingers to form a picture or design.

FISSION: The splitting of the nucleus of an atom into two nearly equal parts, resulting in a tremendous release of energy.

FISSIONABLE: Capable of undergoing fission.

FIVE PERCENTER: One who undertakes to aid businessmen in obtaining contracts or doing other business with the government, usually for a fee of five per cent.

FLAME-OUT: A sudden blowing-out of the fire of a jet engine, caused by improper functioning of the fuel-supply system.

FLIPOVER CARTRIDGE: A phonograph cartridge that has separate needles for playing

both microgroove and standard records and that may be turned to bring the proper needle into playing position.

FLUFF: To bungle or stumble in delivering one's lines during a performance; also, to miss a cue.

FLUID DRIVE: An automotive power coupling between the flywheel of the engine and the transmission gears that operates on a hydraulic turbine principle.

FLUORIDATION: Treatment of drinking water with a fluoride to prevent tooth decay.

FLYING SAUCER: Any of various unidentified objects, usually described as disc- or saucer-shaped, reportedly seen in the air.

FOAM RUBBER: A spongy, fine-textured rubber used especially for cushions, mattresses and the like.

FOLD: To discontinue production or business for lack of patronage or because of public neglect (as, the stage play *folded* after only two performances).

FRAME OF REFERENCE: The environment of personal knowledge or experience in which an idea is conceived or interpreted.

FREELoader: A "sponge"; one who frequently obtains something (as food or drink) that is paid for by someone else.

FREEWAY: An express highway that bypasses towns and is largely free of intersections; a superhighway

FREEZE: To fix inflexibly, as by an executive order, at a given level or in the status on a given day (as, to *freeze* a price or a design).

FREQUENCY MODULATION or FM: A virtually static-free system of radio broadcasting in which the frequency of the carrier wave is modulated in accordance with the form of the sound or signal wave.

FRINGE AREA: An area on the outer edges of one having a greater strength or concentration (as, a *fringe area* for television reception).

FRINGE BENEFIT: Any benefit, such as health insurance or sick leave, not included in the basic wage, that workers receive from their employers.

FROGMAN: A person equipped for extended periods of underwater swimming, usually for military reconnaissance or underwater demolition.

FRONT: A person or group serving as public representative for a pressure group or subversive organization, often unwittingly, while thinking to act in public or patriotic interests.

FUSED COLLAR: A collar, especially one on a man's shirt, that has been lined or otherwise treated to retain its shape.

GADGETEER: An inventor or maker of gadgets; also, one given to buying or using them.

GAGSTER: A writer of gags or jokes, especially for radio and television programs.

GAMMA GLOBULIN: A fraction of blood plasma rich in antibodies and used against diseases such as polio and hepatitis.

GAPA: A rocket-powered guided missile used against aircraft and against other missiles;—from ground-to-air pilotless aircraft.

GENOCIDE: A calculated attempt to destroy systematically a racial, religious, or polit-

- ical group; also, an effort to destroy the language, religion, or culture of a group.
- GERIATRIC:** Of or pertaining to *geriatrics*, the branch of medicine dealing with old age and its diseases; also, aged (as, the *geriatric* patient).
- GHETTO:** A quarter of a city in which members of a racial group are segregated by social and legal pressure.
- GI:** A person who is serving or has served as an enlisted member of the U. S. armed forces.
- GIMMICK:** A trick; a clever or artful device or scheme.
- GISMO:** A gadget; device; contraption; also, anything without a name.
- GIVEAWAY:** A radio or television show in which members of the audience participate and receive prizes.
- GOBBLEDYGOOK:** Involved or obscure language such as is frequently found in official pronouncements.
- GOLDBRICK, slang:** To shirk or find excuses to evade assigned work.
- GOOFBALL, slang:** A sleeping tablet, especially one of the barbiturates.
- GOOGOL:** In mathematics, the figure 1 followed by 100 zeros.
- GRASSROOTS:** The farming districts of the country; also, the people living in them, thought of as a politico-economic group holding firm and independent views.
- GRAVEYARD SHIFT:** The third of three daily shifts, as in a factory, usually beginning at midnight.
- GREEN THUMB:** A special or unusual ability to make plants grow;—usually in the phrase, to have a *green thumb*.
- GREMLIN:** An impish gnome, whimsically accused by airmen of tampering with motors, instruments, and the like.
- G SUIT:** An inflatable suit worn by aviators during rapid aerial maneuvers to counteract the effects on the body of pressure greater than gravity.
- GUIDED MISSILE:** Any missile whose course may be directed during passage by a built-in target-seeking device or by radio control.
- GUN:** To open the throttle of (an engine) to increase the speed.
- GYROPILOT:** A control mechanism, sometimes called *automatic pilot*, that keeps an airplane in level flight and on a set course.
- HALF-TRACK:** One of the endless chain-tracks used instead of the rear wheels on a certain type of vehicle; also, a tractor or truck with half-tracks and front wheels.
- HARDTOP:** An automobile having most of the characteristics of a convertible, but with a stationary steel top.
- HASSLE:** A mix-up; also, an argument or fight.
- H-BOMB or HYDROGEN BOMB:** An extremely powerful fusion bomb.
- HEDGEHOP:** To fly an airplane so low that it has to "hop" over trees and hedges.
- HELIPORT:** A place for helicopters to land in order to discharge or receive passengers or cargoes.
- HEPCAT:** A musician in a jazz band; also, a devotee of jazz.
- HEX:** A spell or enchantment; a jinx (as, to put the *hex* on someone).
- HIGH FIDELITY or HI-FI:** The reproduction of sound, usually by a radio or photograph, with a high degree of faithfulness to the original.
- HIT PARADE:** A listing, as of popular songs or books, in order of current public preference.
- HOOD, slang:** A hoodlum; a rowdy.
- HOOPER or HOOPERATING:** An indication, based on the results of telephone polling, of the popularity of a radio or television program.
- HORSE'S TAIL = PONY TAIL, below.**
- HOT:** Radioactive; also, having to do with radioactive material (as, a *hot* laboratory).
- HOT ROD, slang:** An out-of-date automobile with the trimmings stripped off and the engine stepped up to permit high speeds.
- HOWGOZIT CURVE:** A running graph of the progress of an aircraft flight, especially a transoceanic one.
- HUCKSTER:** One whose business is commercial advertising, especially the preparation of clever, effective advertising programs for radio and television broadcasts.
- HYBRID CORN:** A crossbreed of Indian corn developed from selected strains and having the best characteristics of each.
- HYDROPONICS:** The growing of plants, especially vegetables, with their roots in water that contains the essential minerals, instead of in soil.
- HYPERTENSION:** Abnormally high arterial blood pressure; also, the resulting systemic condition.
- INFLUENCE PEDDLER:** One who tries to get special privileges, especially from the government, for his clients; a five-percenter.
- IN-SERVICE:** Taking place or continuing while in service (as, *in-service* training).
- INSTITUTE:** A short program of instruction or conferences for people already at work in a given field (as, a farmers' *institute* or a bankers' *institute*).
- INTERCOM:** A two-way short-distance communication system with microphones and loud-speakers at each end;—short for *intercommunication system*.
- IRON CURTAIN:** A barrier created by such means as censorship and prohibition of free travel to isolate Russian-controlled territory from outside contacts; hence, any similar barrier against communication.
- IRON LUNG:** A tank device for artificial respiration that forces air into and out of the patient's lungs.
- ISOBAR:** One of two atoms or elements having the same atomic weights but different atomic numbers.
- ISRAELI:** Of or relating to the Jewish state of Israel, in Palestine.
- ISSEI:** A Japanese immigrant to the U. S.; legally, an alien.
- JATO UNIT:** An auxiliary means of propulsion in which rocket engines are used to assist the take-off of an airplane;—from *jet* assisted take-off.
- JEEP:** A small, rugged multipurpose motor vehicle; originally one having four-wheel drive.

JET PROPULSION: Propulsion of a body by forces resulting from the rearward discharge of a jet (a high-speed stream of fluid) through an orifice. The forces are a reaction to the discharge of the jet, in accordance with the Newtonian law that to every force there is an equal and opposite reaction.

JIVE: The slang or jargon used by swing musicians and jitterbugs; also, any similar slang.

JUKEBOX: A coin-operated automatic phonograph-record player.

JUNKIE, slang: A narcotics user or addict.

KEYNESIAN: Of or pertaining to a system of economics (often associated with the New Deal) advocating considerable government participation in the economic affairs of a country.

KICKBACK: The return of part of a sum received, as of wages or fees, prompted by a previous confidential agreement or by coercion.

KINESCOPE: A form of cathode-ray tube with a screen at one end on which television pictures or oscillographs may be produced;—called also *picture tube*.

KINESICS: The study of such body motions as winks and waves as related to communication between people.

KNOW-HOW: Technical skill and practical ability; competence in planning or producing something.

LANDING CRAFT: Any of numerous naval warcraft designed for putting ashore troops or equipment in beach assaults.

LATCH ON TO: To attach oneself; also, to appropriate; to take over.

LEFTIST: One who belongs to a radical or revolutionary party; also, one who holds or advocates ultraliberal principles.

LEPROMIN TEST: A test for the recognition of immunity to leprosy.

LIBRETTO: The plan or scenario for a ballet.

LIQUIDATE: To kill secretly; also, to eradicate ruthlessly.

LOAFER: A man's or woman's low leather step-in shoe, resembling a moccasin but having a flat heel and stiff outsole.

LOBOTOMY: A leucotomy; an incision into the frontal lobe of the brain to sever nerve fibers in an attempt to relieve certain mental disorders.

LOCKER PLANT: A business establishment having quick-freezing equipment and lockers for storing frozen foods.

LONGHAIR: Idealistic; intellectualized; high-brow (as, *longhair* music or *longhair* writing).

LOYALTY OATH: A signed statement of loyalty, often one in which the signer affirms loyalty to the U. S. and denies any Communist connections or sympathies.

LYSENKOISM: A biological doctrine advanced by T. D. Lysenko, Russian agronomist, in defiance of orthodox genetics.

MAE WEST: A yellow life-saving jacket that can be inflated by two cartridges of carbon dioxide, worn especially by airmen in flights over water.

MEGADEATH: One million deaths (as, the power of an atomic bomb may be indicated in terms of *megadeaths*).

MEGATON: A million tons; also, an explosive force equal to that of a million tons of TNT;—used especially with reference to a hydrogen bomb.

MERCY KILLING: Euthanasia; killing, especially in a quick, painless manner, to put the victim out of extreme pain or misery.

ME-TOO-ISM: The echoing of another's opinions or attitudes, usually implying an inability or unwillingness to think for oneself.

MICROFILM: A strip of film on which a reduced-size photographic record of printed matter may be kept in a small space.

MICROGROOVE: A narrow V-shaped groove used on phonograph records intended to play at speeds of 33 1/3 or 45 revolutions per minute.

MIDDELBROW: Middle-class; midway between highbrow and lowbrow.

MILK BAR: A place where milk, ice cream, and other dairy products are sold and may be consumed.

MOBILE: A delicately balanced type of sculpture, usually having movable parts which can be set in motion by air currents or other means.

MOLOTOV COCKTAIL: A crude explosive device, typically, a gasoline-filled bottle capped with an oil-soaked rag that is ignited just as the bottle is thrown at the target.

MOMISM: A supposed excessive admiration and sentimentalizing of mothers, thought to permit a possessive mother to deny her offspring emotional independence.

MONITOR: To check (a radio or television transmission) for quality or fidelity to band; also, to check (as a broadcast) for military or political significance.

MONOLITHIC: Consisting of one large, undifferentiated whole, exhibiting one harmonious pattern throughout (as, a *monolithic* party or culture).

MONTAGE: The production of one complete picture by combining several distinct ones, often in such a way that they blend with or into each other.

MORETIC: Pertaining to mores or social conventions.

MOTEL: A hotel or group of furnished cabins or attached cottages, situated near a highway, offering accommodations to automobile tourists.

MOTHBALL: That which has been placed in indefinite, protective storage (as, a *mothball* fleet or airplane).

MOTORCADE: A parade or procession of automobiles.

MOTOR POOL: A group or fleet of motor vehicles for use as needed by different organizations or individuals.

MULTIPHASIC: Having or considered in terms of many aspects or phases (as, a *multiphasic* approach to a problem).

MUSCULAR DYSTROPHY: A hereditary disease in which there is progressive wasting away of the muscles.

NAPALM: A thickener used to gel gasoline for incendiary bombs and flame throwers.

NEEDLE: To vex or annoy by repeated sharp gibes; also, to goad or prod.

- NEWSCASTER:** One who broadcasts news, as on radio or television; also, a commentator.
- NIACIN:** A member of the B-vitamin group useful in the prevention of pellagra;—called originally *nicotinic acid*.
- NISEI:** A U. S. citizen born of Japanese immigrant parents.
- NONOBJECTIVE:** In art, creating effect through shapes and colors not intended to represent actual objects; abstract.
- NO-SHOW:** A passenger who, after making a reservation on an airplane, does not show up to claim it at flight time and has made no cancellation.
- NUCLEAR:** Having to do with the atomic nucleus (as, *nuclear physics*).
- NURSERY SCHOOL:** A center for children, usually under 5 years of age, providing supervised play and social training for a few hours a day.
- NYLON:** A synthetic material that can be fashioned into tough, strong, elastic threads and used in making brush bristles, hosiery, textile fabrics and the like.
- OCCUPATIONAL THERAPY:** The treatment of disease or injury by giving the patient regulated work that will help his recovery or rehabilitation.
- OMNIBUS:** A book of reprints, usually one containing works of the same type or by a single author.
- OPPOSITE NUMBER:** A person or position in one system corresponding to one in another (as, an ensign is the *opposite number* of a second lieutenant).
- OSCAR:** One of the statuettes awarded annually for highest excellence in motion picture work; hence, any annual award for excellence.
- PACKAGE:** A fully constructed, prearranged program or plan, such as a radio show or tour, usually offered for sale at a flat sum; also, any finished product made ready for immediate use by preassembling all essential elements into a unit.
- PAN:** To move (a camera) in order to follow a moving object or secure a panoramic effect.
- PANIC SWITCH:** The control on the ejector mechanism that throws a jet pilot from his plane in case of emergency.
- PARAPSYCHOLOGY:** A branch of psychology concerned with investigating evidence for telepathy, clairvoyance, and the like, and with experiments in the field of extrasensory perception.
- PARA-RESCUE TEAM:** A team of rescuers who drop by parachute, as to the scene of a plane crash, in order to give immediate aid to anyone in distress.
- PARITY:** The balance between the prices the farmer receives for his products and the prices he has to pay for the things he must buy.
- PARTISAN:** A member of a guerilla band working behind enemy lines and engaged in such activities as sabotage, demolition, and diversionary attacks.
- PARTY DISCIPLINE:** The discipline imposed on its members by a party;—usually applied to the Communist party.
- PARTY LINE:** The policy or course of action followed by a party, originally specifically by the Communist party.
- PATCH TEST:** A test for determining susceptibility, made by applying to the skin small pads soaked with the allergy-producing substance in question.
- PEDAL PUSHERS:** Women's trousers, usually calf-length, for sports wear.
- PENICILLIN:** An antibacterial substance extracted from green mold, useful in treating infections.
- PERIL POINT:** The lowest rate to which a tariff can be reduced without injuring the industry of the country levying it.
- PHOTOMURAL:** An enlarged photograph, usually several yards long, affixed to a wall as decoration.
- PICTURE TUBE = KINESCOPE.**
- PICTURE WINDOW:** An extra-large window, usually in a living room, framing a desirable outside view.
- PIGGY-BACK PLANE:** A small airplane carried aloft on the "back" of a larger one, from which it is released in mid-air.
- PIPE:** In radio and television, to transmit (a program) by wire or coaxial cable.
- PIZZA:** A large flat tart made of bread dough spread with pieces of tomato, cheese, and shreds of meat, anchovies or the like, flavored with herbs, and baked thoroughly.
- PIZZERIA:** A restaurant or bakery where pizzas are made and sold.
- PLATTER:** A phonograph record.
- PLUNGING NECKLINE:** A very deep V-neckline in women's apparel.
- PLUSH:** Luxurious; over-elegant (as, a *plush* summer resort).
- POLICE STATE:** A totalitarian state having repressive government control of radio, press, culture, and economic and political life.
- POLITIC:** To campaign for political office; also, to seek to further a special end.
- POLLEE:** One who is questioned in or gives answers for a poll.
- POLO SHIRT:** A close-fitting pullover jersey or sport shirt of cotton knitwear, originally patterned after jerseys worn by polo players.
- PONY TAIL:** A hairdo for women, in which the hair is drawn back tightly from the face and up from the neck, and tied.
- POODLE CUT:** A very short, curly hairdo for women, in imitation of a poodle's coat.
- POP:** Short for *popular*;—used especially of 'music other than classical.
- PORTAL-TO-PORTAL:** Pertaining to the time a workman spends traveling from the portal or gate of company property to his actual place of work and in returning at the end of the work shift.
- PREFAB:** A prefabricated house or structure, construction of which consists merely of assembling and uniting standardized parts.
- PRESSING:** A phonograph record made from a matrix; also, the whole number of such recordings made at a single time.
- PRESSURE GROUP:** A minority group that brings pressure to bear on legislators or public opinion, often by lobbying or use of propaganda, to force legislation or change public policy.

PRESSURE SUIT: A suit worn by pilots flying at high altitudes, which inflates automatically when pressure inside the plane is lost.

PRESSURIZE: To maintain near-normal atmospheric pressure inside (the sealed cabin of an airplane) during high-level flight.

PRIVATE EYE: A private detective.

PROFILE: A vivid, concise biographical sketch; also, a concise analysis of any subject.

PROXIMITY FUZE: A device for making a projectile explode near the target.

PSYCHODRAMA: A spontaneous drama in which the actors exhibit their natural psychological reactions to a given situation, used especially in treating the mentally ill.

PSYCHOMETRICS: A branch of psychology that deals with the use and application of mental measurement; also, the technique of such measurement.

PSYCHOSOMATIC: Of or pertaining to the influence of mental factors on bodily disorders.

PUBLIC RELATIONS: The activities of a corporation, government, or other organization in building and maintaining good relations with the general public or with special groups.

PUNCH CARD: A data card with punched holes in particular places, each having an assigned significance, used in certain automatic business machines.

PURGE: To rid (a state or party) of members suspected of disloyalty.

PUSHOVER: An opponent easily defeated or a victim incapable of effective resistance; also, any problem presenting no real difficulties.

QUARTERBACK: To direct; to make plans and give instructions for carrying them out.

QUICK-FREEZE: To freeze (food) so rapidly that the natural juices and flavor are preserved.

QUICKIE: Anything hastily prepared or made; anything done without much preparation.

RABBIT EARS: A small indoor television antenna composed of two rods projecting upward from a ball-base in the form of a V.

RACISM: The assumption that certain races are naturally superior to others; also, any doctrine or program based on such an assumption.

RADAR: A powerful radio detecting device capable of establishing the distance, altitude, and direction of motion of any object in the path of its beam.

RADIANT HEATING: The heating of a house or room by heat radiated from large surfaces, such as floors, walls, or baseboards, that have first been warmed by heating coils or hot-air ducts.

RADIATION SICKNESS: An illness that results from exposure to radiation, as in radiotherapy or an atom bomb explosion.

RANCH HOUSE: A one-story dwelling, usually with an informal interior plan and a low-pitched roof.

REACTOR: An arrangement of fissionable material designed for the production and control of a chain reaction;—called also *nuclear reactor* and *pile*.

RECESSION: A slowing down of commercial and industrial activity, less severe than a depression; also, a period of such slackening.

RECONVERSION: The process of converting (especially a war plant) back to the production of civilian goods.

RED-BAITER: One who baits, attacks, or harasses communists or radicals.

REFRESHER: Providing reinstruction after a period of inactivity or instruction designed to keep one abreast of new developments in a field (as, a *refresher* course in auto mechanics).

RESISTANCE: An organized underground movement in a conquered country made up of groups of fighters engaged in sabotage and secret operations against occupation forces;—often with *the*.

REV: To raise or lower the number of revolutions per minute;—originally, of an airplane motor.

Rh FACTOR: A factor present in the red blood cells of 85 per cent of white persons (Rh-positive) and absent in 15 per cent (Rh-negative), so called because discovered in the blood of Rhesus monkeys. Rh incompatibility is manifested by red cell destruction and occurs when the two types are mixed in one person, especially as in the infant of an Rh-positive father and Rh-negative mother.

RHUBARB: A heated argument or dispute, often one that takes place on the field during a baseball game.

RIBOFLAVIN: Vitamin B₂, the growth-promoting substance of the vitamin-B group.

RIGHTIST: In politics, a member of the right; a conservative or royalist.

ROBOT BOMB: A small, pilotless jet-propelled airplane, steered by a gyroscopic device and loaded with explosives, that falls as an aerial bomb when its fuel supply is gone.

ROC: An aerial bomb with a television apparatus that transmits information back to the bombardier, who may then correct his initial aim by remote radio control.

ROCKET SHIP: An aircraft propelled by rocket power.

ROLLER DERBY: A form of sport in which teams on roller skates race around a track.

ROTATION: The military system of exchanging individuals or units assigned to combat or arduous duties with personnel more comfortably situated.

RUMPUS ROOM: A room in a home, often in the basement, set apart and suitably furnished for games and recreation.

RUPTURED DUCK: The symbol of an eagle with wings outspread depicted in the discharge emblem for personnel of the U. S. armed services.

RUSSIAN ROULETTE: A game or act of bravado in which the "player" puts one cartridge into a revolver, aims it at himself, spins the cylinder, and pulls the trigger.

SATELLITE: A state or country politically

and economically dominated by a more powerful neighboring one.

SCAN: In radar, to cause (a certain area) to be traversed by a directive beam.

SCARE BUYING: Sudden buying, often involving an overstocking, of certain goods because of the fear that they may become scarce or unobtainable.

SCHMOE or SCHMO, *slang:* A stupid person; a misfit; a jerk.

SCIENCE FICTION: Imaginative or fantastic fiction, dealing especially with such subjects as life in the future, interplanetary travel, and life on other planets.

SCRATCH TEST: A test for determining susceptibility, made by rubbing an extract of the allergy-producing substance into the skin.

SCREEN: To pass through a standardized test for sorting out candidates according to abilities or eliminating the unfit; hence, to examine or select methodically.

SCREWBALL: Someone whose ideas or actions are crazy or fantastic; also, anything ridiculously absurd or zany.

SCRIPTER: A writer of scripts, as for movies, radio, or television.

SEND: In swing music, to perform with or inspire to spontaneous improvisations; also, to play so as to elate a listener.

SHAKEOUT: A moderate slowing down of commercial and industrial activity with a decrease in prices and employment, usually regarded as a readjustment toward normal after a period of inflation.

SHARP, *slang:* Conspicuously attractive; in keeping with the latest styles, as of clothing or speech.

SHOCK THERAPY: Treatment of mental disorders by means of a coma induced artificially by the administration of drugs or electric shock.

SHOOTING WAR: Conflict involving actual participation of armed forces in combat, as opposed to a war of nerves or a propaganda war.

SHOPPING CENTER: A group of retail stores or other business places, sometimes in one building, and usually provided with a large parking lot.

SIGNATURE: A tune or sound effect used to identify a particular radio program or feature;—called also *theme*.

SILK SCREEN PROCESS: A stencil method in which a design is made on a fine-mesh silk screen and transferred to another surface by forcing pigment through the screen with a squeegee.

SIMULCAST: A simultaneous broadcast of a program by radio and television; also, a program thus broadcast.

\$64 QUESTION: The most baffling question in a given situation, often one that defies direct answer.

SKIP-STOP: Not stopping at all points (as, *skip-stop* elevator or subway service).

SKYSWEEPER: A radar-aimed anti-aircraft weapon.

SKYTYPING: A technique, similar to sky-writing, in which seven equally spaced aircraft emit puffs of smoke to form the letters of a message.

SLICK or SLICK PAPER: A large-circulation magazine printed on glossy paper;—usually implies slightness of content and technical smoothness.

SMAZE: A combination of smoke and haze.

SMEAR: To defame or blacken the reputation of a person or group by name-calling or by maliciously spreading exaggerated charges or rumors.

SMEAR CAMPAIGN: A concentrated program of vilification and smearing.

SNACK BAR: A counter or bar at which light refreshments and lunches are sold or served.

SNEAK PREVIEW: An unannounced showing of a new motion picture, usually to determine audience reaction to it.

SNOLLYGOSTER: A rascal or an unscrupulous person, especially an unprincipled politician.

SNOW: Small, moving, bright or dark spots on a television screen, resulting from the same causes as static in radio.

SOAP OPERA: A daytime radio or television serial drama performed on a commercial program chiefly for housewives.

SOCIALIZED MEDICINE: Administration by a government or other organized group of medical and hospital services for all members of a class or all members of the population.

SONAR: An apparatus that detects the presence and location of submarines or other underwater objects;—from sound navigation and ranging.

SOUFFLÉ: Tiny multicolored beads of glass or metal, used for embroidery.

SOUND CONDITIONING: The control of sound, as in an auditorium, by eliminating unwanted noise and excessive reverberations.

SOUP UP: To step up the horsepower of a motor, as on an airplane or a jalopy.

SPACE: Popularly, the region beyond the earth's atmosphere, lying between and beyond the planets and the stars.

SPACE MEDICINE: A suggested branch of medicine which would try to study conditions of outer space and their effect on the human body.

SPACESHIP: An imaginary aircraft for interplanetary travel.

SPEECH CLINIC: A clinic for the diagnosis and correction of speech disorders.

SPELUNKER: One whose hobby is exploring and studying caves and underground phenomena.

SPIV, *slang:* One who contrives to make a living without working; a slacker.

SPLINTER GROUP: In politics, a group broken away from a larger, original organization.

SPLIT-LEVEL HOUSE: A house built on different levels, usually with the floor level of a single-story section about midway between the floor levels of an adjoining two-story section.

SPOTTER: A civilian who watches the sky to report and identify approaching aircraft.

STATELESS: Without a state or nationality, as a person who was a citizen of a country no longer in existence.

STATESIDE: Of, pertaining to, characteristic of, or coming from the continental U. S.

(as, a transfer from Europe to *stateside* duty).

STATIONARY FRONT: In meteorology, a boundary between two air masses which show little or no movement.

STATION BREAK: In radio and television, the pause in a program or between programs to permit stations to identify themselves.

STATION WAGON: A sedanlike automobile having a tail gate and back seats that can be removed or folded so the vehicle can be used for light trucking.

STATISM: Government control or direction of important aspects of the economic life of a citizen.

STEREOPHONIC: Of reproduced sound, giving the effect of coming from two or more directions.

STOCK CAR RACING: Automobile racing in which ordinary cars are used rather than specially constructed racers.

STOCKPILE: A reserve supply of any essential material accumulated and stored as a safeguard against a shortage.

STORM COAT: A tailored winter coat for men or women, usually having a heavy lining and a mouton collar, and often made of gabardine.

STRAWHAT CIRCUIT: A summer theater circuit, often including the more popular resort areas.

STREPTOMYCIN: A substance extracted from certain soil bacteria and used against the bacteria of certain diseases, as typhoid fever, tularemia, and tuberculosis.

SULFA: Of or belonging to a class of drugs that are related to sulfanilamide and have a destructive action against certain types of bacteria.

SUPERHIGHWAY: A highway consisting of four or more lanes, designed for fast-moving traffic.

SUPERMARKET: A large, departmentalized retail store, usually self-service, selling foods and other household merchandise.

SUPERSONIC: Designating a speed greater than that of sound (about 738 miles per hour); also, moving or capable of moving at such speed (as, a *supersonic* aircraft).

SWING SHIFT: The work shift between the day and night shifts in a factory operating on a 24-hour basis, usually from 4 p.m. to midnight.

SYNC: In motion pictures and television, short for *synchronize* or *synchronization*.

TAKE-HOME PAY: The remainder of a person's gross wages after deductions, as for income-tax withholding, retirement, and union dues, have been made.

TAPE: A magnetized ribbon on which sounds may be recorded. — To record (sounds) on such a ribbon.

TELECAMERA: A television camera.

TELECAST: A program broadcast by television. — To broadcast by television.

THEATER-IN-THE-ROUND: A theater so arranged that the action area is in the center and the audience is seated on all sides of it;—called also *arena theater*.

THERMONUCLEAR: Pertaining to the heat energy resulting from or connected with changes in the nuclei of atoms.

THIAMINE: A vitamin, also known as *vitamin B₁*, that prevents beriberi and certain kinds of neuritis.

THOUGHT CONTROL: Repressive control or domination of individual ideas and thinking by another person or group.

THREE-DIMENSIONAL or **3-D:** Giving the illusion of depth or varying distances;—applied to pictures, especially stereoscopic motion pictures.

TONE ARM: The movable part of a phonograph that contains the sound box or pickup and permits the needle to follow the grooves in the record.

TOP-DRAWER: Of the highest or first order of rank, excellence or importance.

TRACE ELEMENT: A chemical element, usually a metal, essential in minute amounts to the welfare of a plant or animal.

TRACKMOBILE: A lightweight tractor used for moving railroad cars in a switchyard.

TRANSISTOR: An electronic device similar in use to the electron tube.

TWEEDY: Given to or fond of wearing tweeds;—usually implying a certain matter-of-factness, robustness or informality of manner.

TWEETER: A small loudspeaker that responds only to high sound frequencies and is used to reproduce sounds of high pitch.

2,4-D: A white crystalline compound used as a weed killer.

ULTRAHIGH FREQUENCY or **U.H.F.:** In radio and television, any frequency in the range from 300 to 3000 megacycles.

VEEP: A vice-president.

VERY HIGH FREQUENCY or **V.H.F.:** In radio and television, any frequency in the range from 30 to 300 megacycles.

VIDEO: *Television.* Pertaining to or used in sending or receiving the image (as, *video frequency*). Contrasted with *audio*.

VIDEOCAST: A television broadcast.

VIP: A very important person; sometimes, one using an assumed name for security reasons.

WALKIE-LOOKIE: A portable, battery-operated television camera.

WALKIE-TALKIE: A compact, battery-operated transmitting and receiving radiotelephone that is carried like a knapsack and especially adapted for communication in the field.

WATER SKIS: Wide skis towed by a fast motorboat and ridden like a surfboard.

WEEDICIDE: Any weed killer, especially a chemical one, as 2,4-D.

WELFARE STATE: A state that, by its concern with public health, insurance against sickness and unemployment, and similar measures, assumes a large share of responsibility for the welfare of its citizens.

WETBACK: A person who enters the U. S. illegally from Mexico by wading or swimming the Rio Grande River.

WHAMMY: A curse or jinx (as, to put the *whammy* on a person).

WITCH-HUNT: A searching out of victims, especially liberals, professedly to expose them as disloyal or subversive, but actually to harass them for political reasons.

WOOFER: A loudspeaker, larger than a tweeter, that responds only to lower sound frequencies.

ZOOT SUIT: A suit of extreme cut, usually having a long jacket with broad shoulders, and high-waisted peg-top trousers.

Abbot. Address: The Right Reverend _____
_____, Abbot of _____. *Begin:* Right
Reverend and dear Father.

Alderman. Address: Honorable _____
_____. *Begin:* Dear Sir.

Ambassador. Address: His Excellency, _____
_____, Ambassador of _____ at _____.
Begin: Sir; or Excellency.

Ambassador and his wife. Address: His Excel-
lency, The _____ Ambassador and Mrs.
_____. *Begin:* Your Excellencies.

Archbishop (Anglican). Address: The Most
Reverend His Grace the Lord Archbishop
of _____. *Begin:* My Lord Archbishop; or
Your Grace.

Archbishop (Roman Catholic). Address: The
Most Reverend _____, D.D.,
Archbishop of _____. *Begin:* Your Ex-
cellency.

Archdeacon. Address: The Venerable The
Archdeacon of _____. *Begin:* Venerable
Sir.

Army Officers. Address: The Commander in
Chief, Army of the U. S.; or (use officer's
rank) _____. *U.S.A. Begin:* Sir;
or My dear General _____.

Assemblyman. Address: The Honorable _____
_____, Member of Assembly; or Assembly-
man _____. *Begin:* Sir; or My dear Mr.
_____.

**Assistant Secretary (Assistant to a Cabinet Offi-
cer). Address:** Honorable _____,
Assistant Secretary of _____. *Begin:* Sir;
or Dear Mr. _____.

Associate Justice. Address: The Honorable
_____, United States Supreme
Court; or Mr. Justice _____. The Supreme
Court. *Begin:* Mr. Justice; or Dear Justice.

Baron. Address: The Right Honourable Lord
_____; or The Lord _____. *Begin:* My
Lord.

Baroness. Address: The Right Honourable the
Baroness _____; or The Lady _____.
Begin: Madam.

Baronet. Address: Sir John _____, Bt. or
Bart. *Begin:* Sir.

Baronet's wife. See Lady, below.

Baron's wife. See Baroness, above.

Bishop (Anglican). Address: The Right Rev-
erend the Lord Bishop of _____; or The
Lord Bishop of _____. *Begin:* My Lord
Bishop; or My Lord.

Bishop (Methodist). Address: Reverend Bishop
_____. *Begin:* Dear Sir; or My
dear Bishop _____.

Bishop (Protestant Episcopal). Address: To the
Right Reverend _____, Bishop of
_____. *Begin:* Right Reverend and Dear
Sir; or Dear Bishop _____.

Bishop (Roman Catholic). Address: The Most
Reverend _____, Bishop of
_____. *Begin:* Your Excellency; or Most
Reverend Sir.

Cabinet Officers (U. S.). Address: The Honora-
ble the Secretary of State (or Labor, etc.);
The Secretary of State, etc. *Begin:* Sir; or
My dear Mr. Secretary.

Canon. Address: The Very Reverend Canon
_____; or The Very Reverend
_____, Canon of _____. *Begin:* Very Re-
verend Canon; or Dear Canon _____.

Cardinal. Address: His Eminence John, Car-
dinal _____. *Begin:* Your Eminence.

Cardinal (if also an Archbishop). Address: His
Eminence _____, Cardinal _____, Arch-
bishop of _____. *Begin:* Your Eminence.

Chargé d'Affaires. Address: The Chargé d'Af-
faires of _____; or _____, Esq.,
Chargé d'Affaires. *Begin:* Dear Sir; or My
dear Mr. _____.

Chief Justice of the U. S. Address: The Chief
Justice of the U. S.; or The Chief Justice,
The Supreme Court, Washington, D. C.
Begin: My dear Mr. Chief Justice; or Sir.

Clergyman. Address: The Reverend _____; or (if doctor of divinity) The Rev. Dr. _____. Begin: Dear Sir; or Reverend Sir.

Clerk of Senate or House. Address: The Honorable _____, Clerk of _____. Begin: Sir; or Dear Sir.

Commissioner of Bureau. Address: The Honorable _____, Commissioner of the Bureau of _____. Begin: Sir; or Dear Sir.

Congressman. Address: Honorable James H. Smith, House of Representatives. Begin: Sir; or Dear Sir.

Consul. Address: To the American Consul at _____; or _____, Esq., American Consul at _____. Begin: Dear Sir.

Countess. Address: To the Right Honourable The Countess of _____. Begin: Madam.

Dame. Address: Dame _____. Begin: Madam.

Deacon. (Anglican and Protestant Episcopal). Address: The Reverend Deacon _____. Begin: Reverend Sir.

Dean (Ecclesiastic). Address: The Very Reverend the Dean of _____. Begin: Very Reverend Sir; or Sir.

Dean, Rural (Roman Catholic Church). Address: The Very Reverend _____, R.D., or V.F. Begin: Very Reverend Father.

Dean of a College or Graduate School. Address: Dean _____. Begin: Dear Sir; or Dear Dean _____.

Divorced woman. Address: Ordinarily use the maiden name with Mrs. Some divorced women prefer to resume the Miss.

Doctor of Divinity. Address: _____, D.D.; or Rev. Dr. _____. Begin: Dear Sir; or Dear Dr. _____.

Doctor of Philosophy, Laws, Medicine, etc. Address: _____, Ph.D. (LL.D.) (M.D.); or Dr. _____. Begin: Dear Sir; or Dear Dr. _____.

Dowager. See *Widow*, below.

Duchess. Address: Her Grace the Duchess of _____; or The Most Noble the Duchess of _____. Begin: Madam; or Your Grace.

Duchess of the Blood Royal. Address: Her Royal Highness The Duchess of _____. Begin: Madam; or May it please your Royal Highness.

Duke. Address: His Grace the Duke of _____; or The Most Noble the Duke of _____. Begin: My Lord Duke; or Your Grace.

Duke of the Blood Royal. Address: His Royal Highness The Duke of _____. Begin: Sir; or May it please your Royal Highness.

Earl. Address: The Right Honourable The Earl of _____; or The Earl of _____. Begin: My Lord.

Earl's wife. See *Countess*, above.

Envoy. Same as Minister (Diplomatic).

Esquire. Address: _____, Esq. Begin: Sir; or Dear Mr. _____. (Note.—Esq. is never used if the person is addressed by any other title, even Mr.)

Governor. Address: (In Mass. and by court in some other states) His Excellency, The Governor of _____; or His Excellency _____; or (in other states of the U. S.) The Honorable the Governor of _____; or Hon. _____. Governor of _____. Begin: Sir; or Dear Sir.

Governor-General of Canada. Address: His Excellency The Right Honourable _____, (plus rank or title, if any). Begin: My Lord; or Sir.

Governor-General's wife. Address: Her Excellency _____. Begin: Madam.

Judge (U.S.A.). Address: The Honorable _____, U. S. District Judge. Begin: Dear Sir; or My dear Judge _____.

King. Address: The King's Most Excellent Majesty; or His Most Gracious Majesty, King _____. Begin: Sir; or May it please your Majesty.

King's Counsel. Address: To _____, Esq., K.C. Begin: Sir.

Knight. Address: Sir John _____ (initials of his order, if any, as K.C.B.). Begin: Sir.

Knight's wife. See *Lady*, below.

Lady. Address: Lady _____, or (if daughter of a baron or viscount) Hon. Lady _____; or (if the daughter of an earl, marquises, or duke) Lady Florence _____. Begin: Madam; or Your Ladyship.

Lawyer. Address: _____, Esq.; or Mr. _____, Attorney at Law. Begin: Dear Sir; or My dear Mr. _____.

Lieutenant Governor. Address: The Honorable _____, Lt. Governor of _____. Begin: Sir; or Dear Sir.

Maid of Honor. Address: The Honourable Miss _____. Begin: Madam.

Marchioness. Address: The Most Honourable the Marchioness of _____. Begin: Madam.

Marquis. Address: The Most Honourable the Marquis of _____; or The Marquis of _____. Begin: My Lord Marquis.

Mayor (in Canadian cities and towns, and English boroughs). Address: The Right Worshipful the Mayor of _____ (English); His Worship, The Mayor of _____ (Canadian). Begin: Sir.

Mayor (in the U. S.). Address: The Honorable _____, Mayor of _____; or The Mayor of the City of _____. Begin: Sir; or Dear Mr. Mayor.

Member of Parliament (or of a Provincial Legislative Council or Legislature, etc.) To the ordinary form of address add M.P. (or M.P.P.; or M.L.A., etc.). Begin: Sir.

Minister (Diplomatic). Address: The Honorable _____, Minister of _____. Begin: Sir; or My dear Mr. Minister.

Minister (Religious). See *Clergyman*, above.

Moderator (Presbyterian Church). Address: The Right Reverend _____. Begin: Right Reverend Sir.

Monsignor. Address: The Right Reverend Monsignor _____. Begin: Right Reverend and dear Monsignor.

dis- Reverend Superior of a Sisterhood. Address: The Reverend Mother Superior, Convent of _____; or Reverend Mother _____, O.S.D. (or other initials of the order). *Begin:* Reverend Mother; or Dear Madam.

Naval Officers. Address: The Admiral of the Navy of the U. S.; or Captain _____, U.S.N. *Begin:* Sir; or Dear Commander _____; but for officers below the rank of commander, Dear Mr. _____.

Nun. See *Sister of a Religious Order*, listed below.

Papal Nuncio or Internuncio or Apostolic Delegate. Address: His Excellency, The Papal Nuncio (or Internuncio or Apostolic Delegate) to _____. *Begin:* Your Excellency.

Patriarch (Eastern Church). Address: His Beatitude the Patriarch of _____; or His Beatitude the Lord _____, Patriarch of _____. *Begin:* Most Reverend Lord; or Your Beatitude.

Pope. Address: To His Holiness Pope _____. *Begin:* Most Holy Father; or Your Holiness.

President of a College or University. Address: _____, LL.D. (or if he is not an LL.D., use the initials of his highest degree), President of _____ University; or President, _____ University. If he is a clergyman, address as Reverend _____, LL.D., President of _____ University. *Begin:* Dear Sir; or Dear President _____.

President of a Theological Seminary. Address: The Rev. President _____. *Begin:* Dear Sir; or Dear President _____.

President of State Senate. Address: The Honorable _____, President of the Senate of _____. *Begin:* Sir.

President of the Senate of the U. S. Address: The Honorable, The President of the Senate of the U. S.; or The Honorable _____, President of the Senate. *Begin:* Sir.

President of the U. S. Address: The President, The White House. *Begin:* Mr. President; or The President; or My dear Mr. President.

Priest (Roman Catholic Church). Address: Reverend _____, O.S.M. (or other initials of his order). *Begin:* Dear Father _____ (religious name).

Prime Minister of Canada. Address: The Right Honourable _____, P.C., Prime Minister of Canada. *Begin:* Sir.

Prince of the Blood Royal. Address: His Royal Highness Prince _____. *Begin:* Sir.

Prince of Wales. Address: His Royal Highness The Prince of Wales. *Begin:* Sir; or May it please your Royal Highness.

Princess of the Blood Royal. Address: Her Royal Highness the Princess _____ (Christian name). *Begin:* Madam.

Privy Councillor (British Imperial). Address: To the Right Honourable _____, P.C. *Begin:* Sir. Note.—If other titles are used, they should come after *The Right Honourable*; as, *The Right Honourable Sir John* _____.

Privy Councillor (of Canada). Address: The Honourable _____. *Begin:* Sir.

Professor in a College or University. Address: Professor _____; or _____, Ph.D. (or LL.D., M.D., etc., using only the initials of his highest degree, if the degrees are in the same field), Professor of _____. *Begin:* Dear Sir; or My dear Professor.

Professor in a Theological Seminary. Address: The Reverend Professor _____. *Begin:* or The Rev. _____, D.D. *Begin:* Dear Sir; or Dear Professor _____.

Queen. Address: The Queen's Most Excellent Majesty; or Her Gracious Majesty, The Queen. *Begin:* Madam; or May it please your Majesty.

Queen Mother. Address: Her Gracious Majesty Queen _____. *Begin:* Madam; or May it please your Majesty.

Rabbi. Address: Rabbi _____; or The Rev. _____. *Begin:* Reverend Sir; or My dear Rabbi _____. (If he holds a doctor's degree, Dr. may be substituted for Rabbi.)

Rector of a Religious House or of a Seminary. Address: The Very Reverend _____, O.S.B. (or other initials of order), Rector, Brothers of St. Francis. *Begin:* Very Reverend and dear Father (or Brother).

Representative. See *Congressman*, above.

Senator (U. S.) Address: The Honorable _____, the U. S. Senate, Washington, D. C. *Begin:* Dear Sir; or My dear Senator.

Sister of a Religious Order. Address: Sister _____, (followed by the initials of the order). *Begin:* Dear Sister; or My dear Sister _____.

Speaker of the House of Commons (Canada). Address: The Honourable _____, The Speaker of the House of Commons. *Begin:* Dear Mr. Speaker.

Speaker of the House of Representatives of the U. S. Address: The Honorable _____, Speaker of the House of Representatives. *Begin:* Sir; or My dear Mr. Speaker.

State Senator. Like Senator (U. S.).

Undersecretary of State (U.S.A.). Address: The Undersecretary of State; or The Honorable _____, Undersecretary of State. *Begin:* Sir; or Dear Mr. _____.

Vice-President. Address: The Vice-President; or The Honorable _____, Vice-President of the U. S. *Begin:* Mr. Vice-President; or Sir.

Viscount. Address: The Right Honourable the Viscount _____; or The Viscount _____. *Begin:* My Lord.

Viscountess. Address: The Right Honourable the Viscountess _____; or The Viscountess _____. *Begin:* Madam.

Widow. Address: Ordinarily address by her former title; as, Mrs. John Smith, not Mrs. Mary Alice Smith, unless the latter form is preferred by the person herself.

THE UNITED STATES

STATES, TERRITORIES AND CITIES

(State flower, bird, etc. are official unless otherwise indicated; dates in parentheses are those of adoption. Area is total of land and inland water. Estimated population figures for 1957 are as of July 1 and are provisional. Largest cities include incorporated places only.)

ALABAMA

Capital: Montgomery.
Governor: James E. Folsom, Dem. (to Jan. 1959).

Organized as territory: Mar. 3, 1817.
Entered Union & (rank): Dec. 14, 1819 (22).
Seceded from Union: Jan. 11, 1861.
Re-entered Union: July 13, 1868.
Present constitution adopted: 1901.
Motto: *Audemus jura nostra defendere* (We dare defend our rights).

State flower: Goldenrod (1927).
State bird: Yellowhammer (1927).
State song: "Alabama" (1931).
Nickname: Yellowhammer State.
Origin of name: Disputed. May come from Choctaw meaning "thicket-clearers" or "vegetarian-gatherers."

1940 population & (rank): 2,832,961 (17).
1950 population & (rank): 3,061,743 (17).
1957 estimated population: 3,151,000.
Area & (rank): 51,609 sq. mi. (29).
Geographic center: In Chilton Co., 12 mi. SW of Clanton.

Number of counties: 67.
Largest cities (1950 Census): Birmingham (326,037); Mobile (129,009); Montgomery (106,525); Gadsden (55,725); Tuscaloosa (46,396).

State forests: 6 (14,248.58 ac.).
State parks: 34 (39,619.6 ac.).
Total gross tax receipts (1956-57): \$618,203,837.
Total gross tax disbursements (1956-57): \$624,466,789.

Alabama is the leading heavy-industry state in the South. Textiles, iron and steel, and sawmill products lead its manufacturing, which centers around the "Pittsburgh of the South"—Birmingham. Industry is growing rapidly in other areas, including the Tennessee River Valley, with its great Muscle Shoals power plant. Lumber, marble, dolomite and petroleum are other important products. Alabama ranks high in the production of cotton, cattle, corn, hay, nuts, broiler chickens and sweet potatoes.

At Tuskegee Institute, founded by Booker T. Washington, Dr. George Washington Carver carried out his famed agricultural research.

The Confederacy was founded at Montgomery in Feb. 1861, and for a time the city was the Confederate capital.

In 1540, Hernando de Soto and his treasure seekers were the first white men to see the state, although Cabeza de Vaca may have preceded him in 1528.

ALASKA

Capital: Juneau.
Governor: First state Governor to be elected Nov. 1958 for 4-year term.

Organized as territory: 1912.
Entered Union: Formal admission to be early in 1959.

Constitution ratified: April 24, 1956.
Motto: None.
State flower: Forget-me-not.
State bird: Willow ptarmigan.
State song: "Alaska's Flag."
Nickname: Commonly called "The Last Frontier."

Origin of name: Corruption of native word meaning "great country."

1939 population: 72,524.
1950 population: 128,643.
1939-50 population change: +77.4%
1956 estimated population: 206,000.
Area & (rank): 586,400 sq. mi. (1).

Geographic center: 95 mi. south of Ft. Gibbon.
Number of counties: Will be decided by first state Legislature.

Largest cities (estimated 1957): Anchorage (31,000); Fairbanks (10,050); Ketchikan (7,500); Juneau (7,100).

State forests: None.
State parks: None.
General revenue (1957): \$23,176,578.

General expenditure (1957): \$21,488,080.
Alaska, newest and largest of the states, was called "Seward's Folly" in 1867, when that Secretary of State arranged for its purchase from Russia for \$7,200,000. Since then Alaska has returned approximately \$3,500,000,000 worth of products to the U. S.

Canned salmon is Alaska's principal product. It mines gold, supplies all domestically mined U. S. tin and also turns out platinum, coal, antimony, silver, mercury, tungsten and chromium.

The Pribilof Islands, in the Bering Sea, are famous as the breeding ground of the Alaska fur seal, which is under careful government control. Beaver, muskrat, otter, mink and other furs also abound. Alaska's first pulp mill at Ketchikan, constructed at a cost of \$54 million, began operation in 1954.

Mt. McKinley, in the south central part, is 20,300 feet high, the tallest peak in North America. With its wild interior, still partly unexplored, this territory is a hunter's paradise. With only 4.4 persons for every square mile, Alaska is by far the most thinly settled of the states. Sitka was its capital until 1912.

Alaska has magnificent glaciers and active volcanoes. Winter temperatures in the interior have been known to register 78° low zero. However, summer temperatures in the same area have been recorded at 99° above zero; and large parts of the territory, especially in the southeast, enjoy mild climate in both summer and winter.

Alaska's first state Governor was elected in Nov., 1958, to serve a 4-year term. The Legislature consists of a Senate and a House. Senators are elected to serve four years, while members of the House serve two years. The salaries of the Governor and the legislators will be set by the first state Legislature.

The Aleutians include the following island groups (and major islands): Fox Islands (Unimak, Akutan, Unalaska, Umnak); Islands of the Four Mountains (Chuginadak, Kagamil, Carlisle, Herbert); Andreanof Islands (Atka, Tanaga, Adak, Kanaga); Rat Islands (Kiska, Amchitka, Semisopochnoi, Rat); Near Islands (Agattu, Attu). In June 1942, the Japanese occupied Attu and Kiska. However, Attu was retaken by the U. S. in May 1943; Kiska was evacuated by the Japanese in Aug. 1943 after extensive shelling and bombing of the island.

Vitus Bering, a Dane working for the Russians, and Alexei Chirikov discovered Alaska and the Aleutians in 1741.

ARIZONA

Capital: Phoenix.

Governor: Ernest W. McFarland, Dem. (to Jan. 1959).

Organized as territory: Feb. 24, 1863.

Entered Union & (rank): Feb. 14, 1912 (48).

Present constitution adopted: 1911.

Motto: *Ditat Deus* (God enriches).

State flower: Flower of saguaro cactus (1931).

State bird: Cactus wren (1931).

State colors: Blue and old gold (1915).

State song: "Arizona," a march song (1919).

State tree: Palo Verde (1957).

Nickname: Grand Canyon State.

Origin of name: From the Indian "Arizonac," meaning "little spring."

1940 population & (rank): 499,261 (43).

1950 population & (rank): 749,587 (37).

1957 estimated population: 1,136,000

Area & (rank): 113,909 sq. mi. (6).

Geographic center: In Yavapai Co., 55 mi. SE of Prescott.

Number of counties: 14.

Largest cities (1950 Census): Phoenix (106,818);

Tucson (45,454); Mesa (16,790); Douglas

(9,442); Yuma (9,145).

State forests: None.

State parks: None.

State revenue (1956-57): \$226,192,243.

State expenditure (1956-57): \$225,442,779.

Manufacturing now ranks first among Arizona's revenue-producing industries. Next in rank is the mining of copper, gold, vanadium, uranium and silver, the production of copper exceeding that of any other state.

Agriculture is the third largest revenue-producing industry. By means of irrigation, its once arid acres produce alfalfa, cotton, wheat, sorghum, vegetables, citrus fruits and

dates. Income from livestock ranks high from both range and feeder cattle.

Phoenix is a popular health and winter resort and a shipper of cotton and vegetables, Tucson is a winter resort, Douglas loads cattle and smelts copper, and Yuma is an agricultural center.

With the Hopi, Navajo (the largest in numbers) and Apache tribes, Arizona has the largest U. S. Indian population, spread over fourteen reservations. It also has some of the country's most famous scenery. In the north is the Grand Canyon; in the east are the Petrified Forest and Painted Desert.

Marcos de Niza, a Franciscan friar, entered the state in 1539 in search of the mythical Seven Cities of Cibola, and was followed a year later by Coronado.

ARKANSAS

Capital: Little Rock.

Governor: Orval Faubus, Dem. (to Jan. 1959).

Organized as territory: Mar. 2, 1819.

Entered Union & (rank): June 15, 1836 (25).

Seceded from Union: May 6, 1861.

Re-entered Union: June 22, 1868.

Present constitution adopted: 1874.

Motto: *Regnat populus* (The people rule).

State flower: Apple Blossom (1901).

State tree: Pine (1939).

State bird: Mockingbird (1929).

State song: "The Arkansas Traveler" (1949).

Nickname: Land of Opportunity.

Origin of name: From the Quapaw Indians.

1940 population & (rank): 1,949,387 (24).

1950 population & (rank): 1,909,511 (30).

1957 estimated population: 1,768,000.

Area & (rank): 53,102 sq. mi. (27).

Geographic center: In Pulaski Co., 12 mi. N of W of Little Rock.

Number of counties: 75.

Largest cities (1950 Census): Little Rock (102,213); Fort Smith (47,942); North Little Rock (44,097); Pine Bluff (37,162); Hot Springs (29,307).

State forests: None.

State parks: 13 (19,079 ac.).

State general & special revenue (1956-57): \$128,736,960.

State general expenditure (1956-57): \$132,026,422.

About 90 per cent of the nation's bauxite—the source of aluminum—comes from the earth of Arkansas, which also contains North America's only known diamond mine, located in Pike County near Murfreesboro, and presently used as a tourist attraction on a "finders-keepers" basis.

The state is almost equally divided between mountains and delta areas. Arkansas has an equable southern climate and fertile central valleys which grow cotton, rice, wheat, corn, oats, potatoes and fruit. Other industries are oil production, lumbering and production of whetstones and antimony ore.

Hot Springs entertains fifteen times its population in guests each year. Its forty-seven famous curative mineral springs, the only ones administered by the Federal Government, are in Hot Springs National Park in the Ouachita Mountains. Pine Bluff has the largest archery factory in the country.

CALIFORNIA

Capital: Sacramento.

Governor: Goodwin J. Knight, Rep. (to Jan. 1959).

Entered Union & (rank): Sept. 9, 1850 (31).

Present constitution adopted: 1879.

Motto: *Eureka* (I have found it).

State flower: Golden poppy (1903).

State tree: California redwoods (*Sequoia sempervirens* & *Sequoia gigantea*) (1937 & 1953).

State bird: California valley quail (1931).

State animal: California grizzly bear (1953).

State fish: California golden trout (1947).

State insect: California dog-face butterfly (unofficial).

State colors: Blue and gold (1951).

State song: "I Love You, California" (1951).

Nickname: Golden State.

Origin of name: From a book, *Amadis de Gaula*, by García Ordóñez de Montalvo, c. 1500.

1940 population & (rank): 6,907,387 (5).

1950 population & (rank): 10,586,223 (2).

1957 estimated population: 13,922,000

Area & (rank): 158,693 sq. mi. (3).

Geographic center: In Madera Co., 35 mi. NE of Madera.

Number of counties: 58.

Largest cities (1950 Census): Los Angeles (2,104,663); San Francisco (798,000); Oakland (397,000); San Diego (434,924); Long Beach (262,000).

State forests: 8 (70,235 ac.).

State parks and beaches: 147 (600,000 ac.).

State general revenue (Est. 1957-58): \$1,144,524,-507.

State general expenditure (Est. 1957-58): \$1,157,-636,678.

California earns more money from raising food and catching fish than any other state, and it stands high in oil production, lumbering and manufacturing. It has more motor vehicles than any other state or any foreign country. Out-of-state tourist visitors and the travel and recreation expenditures of the state's residents continue to play an important part in the expansion of trade and employment opportunities. Irrigation makes possible the production of more than 200 commercial crops.

Nature is spectacular. Death Valley, in the southeast, is 282 feet below sea level, the lowest spot in the nation; Mt. Whitney, a 14,495-foot peak, is the highest point in the U. S.; Lassen Peak is the only active U. S. volcano although its last eruptions were recorded in the years from 1914 to 1917; and the General Sherman Tree in Sequoia National Park is estimated to be about 3,500 years old. San Pedro is the world's largest man-made harbor, and the Bank of America National Trust and Savings Association, operated and owned by the Glanini family, is the largest privately owned bank in the world.

Gold, which was responsible for the state's settlement boom, is still found here, but the state's most important mineral products today are oil, natural gas and its liquids, cement, liquefied petroleum gases, miscellaneous stones, salines, iron ore, tungsten.

California is a leader in electrical energy, and its cities specialize in aircraft and parts, missiles, food processing, electrical and electronic equipment, machinery and fabricated metal products.

California's 4 national parks are great tourist attractions, and the San Francisco-Oakland and Golden Gate bridges are among the world's engineering marvels.

Juan Rodríguez Cabrillo, Portuguese navigator, was probably the first white man to see the state in 1542.

COLORADO

Capital: Denver.

Governor: Stephen L. R. McNichols, Dem. (to Jan. 1959).

Organized as territory: Feb. 28, 1861.

Entered Union & (rank): Aug. 1, 1876 (38).

Present constitution adopted: 1876.

Motto: *Nil sine Numine* (Nothing without Providence).

State flower: Rocky Mountain columbine (1899).

State tree: Colorado blue spruce (1939).

State bird: Lark bunting (1931).

State colors: Blue and white (1911).

State song: "Where the Columbines Grow" (1915).

Nickname: Centennial State.

Origin of name: From the Spanish, meaning "red."

1940 population & (rank): 1,123,296 (33).

1950 population & (rank): 1,325,089 (34).

1957 estimated population: 1,673,000.

Area & (rank): 104,247 sq. mi. (8).

Geographic center: In Park Co., 30 mi. NW of Pikes Peak.

Number of counties: 63.

Largest cities (1950 Census): Denver (415,786);

Pueblo (63,685); Colorado Springs (45,472);

Greeley (20,354); Boulder (19,999).

State forests: 1 (70,980 ac.).

Total state revenue (1957): \$317,061,953.

Total state expenditure (1957): \$318,848,905.

Colorado, the most elevated state in the nation, with 54 of its peaks over 14,000 feet in height and more than 1,000 going beyond the 10,000-foot mark, began as a miner of gold but has been predominantly agricultural in recent times. Livestock, wheat, hay, beans, sugar beets, corn, potatoes, barley and truck vegetables head the crop list. Like California and Arkansas, the state has a highly developed irrigation system to counteract its dry climate and promote farming.

Colorado is one of the nation's largest producers of uranium and vanadium; also mined are gold, silver, lead, zinc, copper, molybdenum, coal and several nonmetallics. The state is also a leading oil producer.

Pueblo, the "Pittsburgh of the West," makes iron, steel, brick, tile and foundry products. Colorado Springs is perhaps the most popular tourist center in the Rocky Mountain sector. Mount Evans Highway is the highest auto road in North America. The world's highest suspension bridge stretches 1,053 feet over the Royal Gorge of the Arkansas River. Summit Lake, 12,740 feet high,

near the top of Mt. Evans, is the highest lake in the U. S. reached by an auto road.

Of archeological interest are the cliff dwellings in the southwestern part of the state.

Coronado entered the state in 1540.

CONNECTICUT

Capital: Hartford.

Governor: Abraham A. Ribicoff, Dem. (to Jan. 1959).

Entered Union & (rank): Jan. 9, 1788 (5).

Present constitution adopted: 1818; revised effective 1955.

Motto: *Qui transtulit sustinet* (He who transplanted still sustains).

State flower: Mountain laurel (1907).

State tree: White oak (1947).

State bird: American robin (1943).

State song: None.

Nicknames: Constitution State; Nutmeg State; Land of Steady Habits.

Origin of name: From an Indian word meaning "beside the long tidal river."

1940 population & (rank): 1,709,242 (31).

1950 population & (rank): 2,007,280 (28).

1957 estimated population: 2,252,000.

Area & (rank): 5,009 sq. mi. (47).

Geographic center: In Hartford Co., at East Berlin.

Number of counties: 8.

Largest cities (1950 Census): Hartford (177,397); New Haven (164,443); Bridgeport (158,709); Waterbury (104,477); Stamford (74,293).

State forests: 26.

State parks: 72.

State general revenue (1957): \$278,459,450.

State general expenditure (1957): \$263,852,468.

Connecticut earned its sobriquet, the "Arsenal of the Nation," by its ability to turn out firearms and ammunition in early days, and from this developed an ability to turn out precision instruments of all classes.

Connecticut's cities produce a variety of products, some of which are: arms, sewing machines, airplanes, typewriters, motors, hardware, cutlery, tools, clocks, locks, pottery, machinery, brass products and hats. Hartford, which has the oldest U. S. newspaper, the *Courant*, established in 1764, is the insurance capital of the nation.

Connecticut devotes its farmland mainly to dairying, fruit growing and poultry raising. It stands high in tobacco growing and no crop in the nation receives as high a price per acre as her shade-grown tobacco.

The state is a popular resort area both for its beaches on Long Island Sound and for its inland lakes and forested hills. The southwest part of the state is a suburban area of New York City.

Connecticut was the first state to have a written constitution, the *Fundamental Orders*, adopted by three original towns of Colonial days in Jan. 1639.

DELAWARE

Capital: Dover.

Governor: J. Caleb Boggs, Rep. (to Jan. 1961).

Entered Union & (rank): Dec. 7, 1787 (1).

Present constitution adopted: 1897.

Motto: Liberty and Independence.

State colors: Colonial blue and buff.

State flower: Peach blossom.

State tree: American holly.

State bird: Blue hen chicken.

State song: "Our Delaware."

Nicknames: Diamond State; Blue Hen State; First State.

Origin of name: In honor of Sir Thomas West, Lord De La Warr.

1940 population & (rank): 266,505 (46).

1950 population & (rank): 318,085 (46).

1957 estimated population: 438,000.

Area & (rank): 2,399.2 sq. mi. (48).

Geographic center: In Kent Co., 11 mi. S of Dover.

Number of counties: 3.

Largest cities (1950 Census): Wilmington (110,356); Newark (6,731); Dover (6,223);

New Castle (5,396); Elsmere (5,314).

State forests: 6 (4,945 ac.).

State parks: 3.

State general revenue (fiscal 1957): \$47,891,585.

State general expenditure (fiscal 1957): \$53,704,138.

Little Delaware, at the lowest mean elevation of any state, grows a great variety of small fruit and vegetables and is a U. S. pioneer in the industry of food canning. Peaches, strawberries, apples, corn, wheat, lima beans, asparagus, tomatoes and hay are the leading crops. Fishing in the bay is an important industry. Delaware's chicken farms are one of the great supply sources for the big markets of the East.

Manufactures in Delaware include chemicals, vulcanized fiber, glazed kid and morocco leathers, textiles, paper, dental supplies, metal products, machinery, machine tools and transportation equipment of every major type. In 1844, the *Bangor*, the first iron seagoing propeller-type vessel constructed in the U. S., was launched at Wilmington.

Delaware was the first state to ratify the U. S. Constitution, on Dec. 7, 1787. During the Civil War, although a slave state, Delaware refused to secede from the Union; the southern part of the state, however, supplied many supporters to the Confederacy.

Henry Hudson discovered Delaware Bay in his exploration of 1609. First settlers in the state were Dutchmen, who arrived in 1631, but who were shortly afterwards massacred by the Indians.

DISTRICT OF COLUMBIA

(City of Washington)

Land ceded to Congress: 1788 by Maryland; 1789 by Virginia (retroceded to Virginia Sept. 7, 1846).

Seat of government transferred to D. C.: Dec. 1, 1800.

Created municipal corporation: Feb. 21, 1871.

Present form of government established: June 11, 1878.

President of Board of Commissioners: Robert E. McLaughlin.

Motto: *Justitia omnibus* (Justice to all).

Official flower: American beauty rose.

Origin of name: In honor of Columbus.

1940 population & (rank as city): 663,091 (11);

1950 population & (rank as city): 802,178 (9).

1957 estimated population: 831,000.

Area: Land, 69.41 sq. mi.; inland water, 7.84.

Geographic center: Near corner of Fourth and L Sts., NW.

Altitude: Highest, 420 ft.; lowest, sea level.

Location: Between Virginia and Maryland, on Potomac River.

Churches: Protestant, 428; Roman Catholic, 40; Jewish, 21; others, 21.

City parks: 780 (6,945.5 ac.).

Telephones (Mar. 1, 1956): 553,507.

Radio sets: 250,400.

Television sets: 227,400.

Radio stations: AM, 7; FM, 8.

Television stations: 4.

Assessed valuation (June 1958): \$3,275,621,105.

City tax rate (1957): \$2.30 per \$100.

Bonded debt (1957): None.

Revenue (1957): \$190,558,806.

Expenditures (1957): \$198,366,611.

The District of Columbia—identical with the City of Washington—is the capital of the U. S. and the first carefully planned capital in the world.

D. C. history began in 1790 when Congress directed selection of a new capital site, 10 miles square, along the Potomac. When the site was determined, it included thirty and three-quarters square miles on the Virginia side of the river. In 1846, however, Congress returned that area to Virginia.

President Washington had commissioned Major Pierre L'Enfant, a French engineer who had fought in the Revolution, to plan the new capital and in 1800 the government moved in. In 1814, during the War of 1812, a British force fired the capital and it was from the white paint applied to cover fire damage that the President's home came to be called the White House.

Washington's skyline is dominated by the Capitol and the Washington Monument, towering 555 feet. The Capitol, while not in the city center, is the key to the street address system. The city is laid out in rectangular blocks, created by streets intersecting at right angles. In addition, diagonal arteries fan out from various centers. Pennsylvania Avenue—the radial lines are generally named for the states—is the most famous of them, with the White House at number 1600.

The Capitol is 751 feet long and 350 feet wide. It has 431 rooms. The two wings, constructed of marble, house the Senate and the House; and the central part of the building contains the Rotunda, the Statuary Hall and the old Supreme Court chamber. Visitors may go through the building from 9 A.M. until 4:30 P.M. Congress normally convenes at noon, and the floor of the Senate and House must be cleared by 11:45 A.M. The galleries in the Senate and House chambers are open to visitors during sessions.

Washington has many other famous buildings and monuments—the Library of Congress, Jefferson Memorial, Lincoln Memorial, Grant Memorial, Tomb of the Unknown Soldier (Arlington Cemetery), Treasury Building, the Pentagon, Petersen House (where Lincoln died) and scores of others.

Washington is administered by three commissioners appointed by the President. Two of them must be residents of the District of

Columbia and the third must be a U. S. Army engineer appointed by the Chief of Engineers.

FLORIDA

Capital: Tallahassee.

Governor: LeRoy Collins, Dem. (to Jan. 1961).

Organized as territory: Mar. 30, 1822.

Entered Union & (rank): Mar. 3, 1845 (27).

Seceded from Union: Jan. 10, 1861.

Re-entered Union: June 25, 1868.

Present constitution adopted: 1885.

Motto: In God we trust.

State flower: Orange blossom (1909).

State bird: Mockingbird (1927).

State song: "Suwannee River" (1935).

Nickname: Sunshine State.

Origin of name: From the Spanish, meaning "feast of flowers" (Easter).

1940 population & (rank): 1,897,414 (27).

1950 population & (rank): 2,771,305 (20).

1957 estimated population: 4,098,000.

Area & (rank): 58,666 sq. mi. (22).

Geographic center: In Citrus Co., 12 mi. W of N of Brooksville.

Number of counties: 67.

Largest cities (1950 Census): Miami (249,276);

Jacksonville (204,517); Tampa (124,681);

St. Petersburg (96,738); Orlando (52,367).

State forests: 4 (204,035 ac.).

State parks: 23 (74,936 ac.).

State government receipts (1956-57): \$540,000,000.*

State government expenditures (1956-57): \$550,000,000.*

* Excess of fiscal-year expenditures over receipts offset by \$117,000,000 surplus from previous fiscal year.

Industry and agriculture are Florida's biggest pursuits, but hotel statistics point to its chief fame—resorts and tourists. Along its coastline, the longest of any state, dozens of communities more than double in population during the winter season when northerners flee snow and cold.

Oranges and grapefruit lead Florida's crop list, then come tomatoes, tobacco, beans, celery, potatoes and field corn. Truck gardening, commercial fishing and cattle are leading industries. Deep-sea fishing for sport is a leading tourist hobby. Industry is becoming increasingly important, with metal-working and chemicals now added to lumber, paper and citrus processing. Tampa is one of the largest cigar manufacturers and Jacksonville ships lumber and turpentine.

Florida's low elevation is dotted by some 30,000 small lakes and the Everglades National Park in the south. St. Augustine, founded in 1565, is the oldest town of European origin in the U. S. Key West, exclusive resort city, is the southernmost city in the U. S. and is connected to the mainland by a unique causeway.

In 1513, Ponce de León, seeking the mythical "Fountain of Youth," was the first white man to see the state.

GEORGIA

Capital: Atlanta.

Governor: Samuel Marvin Griffin, Dem. (to Jan. 1959).

Entered Union & (rank): Jan. 2, 1788 (4).

Seceded from Union: Jan. 19, 1861.
 Re-entered Union: July 15, 1870.
 Present constitution adopted: 1945.
 Motto: Wisdom, justice and moderation.
 State flower: Cherokee rose (1916).
 State tree: Live oak (1937).
 State bird: Brown thrasher (1935).
 State song: "Georgia" (1922).
 Nicknames: Peach State; Empire State of the South.
 Origin of name: In honor of George II of England.
 1940 population & (rank): 3,123,723 (14).
 1950 population & (rank): 3,444,578 (13).
 1957 estimated population: 3,779,000.
 Area & (rank): 58,876 sq. mi. (21).
 Geographic center: In Twiggs Co., 18 mi. SE of Macon.
 Number of counties: 159.
 Largest cities (1950 Census): Atlanta (331,314); Savannah (119,638); Columbus (79,611); Augusta (71,508); Macon (70,252).
 State forests: 25,178,962 ac.
 State parks: 41 (60,794 ac.) (26 parks completed and open to public).
 State general revenue (1957): \$315,590,081.
 State general allocations (1957): \$311,557,757.

Georgia is typical of the changing South. The value of its factory products has passed the value of its farm products, and industrialization is ever increasing. Atlanta is achieving importance as an industrial center. Cotton and lumber products, fertilizer, processed food and a great variety of other items are among the factory output of Macon, Augusta, Savannah and Columbus.

Georgia ranks high in cotton, tobacco, peanuts and pecans. Georgia's peaches are nationally famous. From its vast stands of pine come more than half of all U. S. resin and turpentine. The state is one of the leaders in the value of its clay products. Cattle grazing is extensive. Georgia marble is widely used.

Warm Springs has the celebrated foundation operated to aid infantile paralysis victims. It was there that President Franklin D. Roosevelt died on April 12, 1945.

Hernando de Soto, a Spaniard, in 1540, looked over the red clay of Georgia, and General James Oglethorpe founded its first British colony Feb. 12, 1733, at Savannah.

IDAHO

Capital: Boise.
 Governor: Robert E. Smylie, Rep. (to Jan. 1959).
 Organized as territory: Mar. 3, 1863.
 Entered Union & (rank): July 3, 1890 (43).
 Present constitution adopted: 1890.
 Motto: *Esto perpetua* (It is perpetuated).
 State flower: Syringa (1931).
 State tree: White pine (1935).
 State bird: Mountain bluebird (1931).
 State song: "Here We Have Idaho."
 Nicknames: Gem State; Gem of the mountains.
 Origin of name: From a Shoshoni Indian word meaning "sunup."
 1940 population & (rank): 524,873 (42).
 1950 population & (rank): 588,637 (43).
 1957 estimated population: 640,000.

Area & (rank): 83,557 sq. mi. (13).
 Geographic center: In Custer Co., 24 mi. S of W of Challis.
 Number of counties: 44, plus small part of Yellowstone Park.
 Largest cities (1950 Census): Boise (34,393); Pocatello (26,131); Idaho Falls (19,218); Twin Falls (17,600); Nampa (16,185); Lewiston (12,985).
 State forests: 925,000 ac.
 State parks: 4 (9,000 ac.).
 State revenue (1955-57): general fund, \$52,474,-893; special funds, \$223,808,239.
 State expenditure (1955-57): general fund, \$51,-281,791; special funds, \$222,066,426.

Idaho's huge investment in irrigation has advanced its agriculture well ahead of its mining. Idaho potatoes are eaten everywhere. The state grows apples and other fruits and wheat, corn and barley. There is light diversified manufacturing and Pocatello sells its cheese to a world market.

Idaho mines gold, silver, lead, zinc, copper and tungsten, and still has vast undeveloped mineral wealth. In its rugged central mountains is an area that is reachable only by pack horse. The forests of the state, covering at least one-third of the area, account for the fact that lumbering is extensive.

Tourist trade is important. Hunting and fishing are excellent. Sun Valley is a famed resort and attracts countless tourists to its swimming and skiing facilities.

ILLINOIS

Capital: Springfield.
 Governor: William G. Stratton, Rep. (to Jan. 1960).
 Organized as territory: Feb. 3, 1809.
 Entered Union & (rank): Dec. 3, 1818 (21).
 Present constitution adopted: 1870.
 Motto: State sovereignty, national union.
 State flower: Violet (1908).
 State tree: Oak (1908).
 State bird: Cardinal (1929).
 State song: "Illinois" (1925).
 State slogan: Land of Lincoln.
 Nickname: Prairie State.
 Origin of name: From an Indian word and French suffix meaning "tribe of superior men."
 1940 population & (rank): 7,897,241 (3).
 1950 population & (rank): 8,712,176 (4).
 1957 estimated population: 9,637,000.
 Area & (rank): 56,400 sq. mi. (24).
 Geographic center: In Logan Co., 28 mi. NE of Springfield.
 Number of counties: 102.
 Largest cities (1950 Census): Chicago (3,620,-962); Peoria (111,856); Rockford (92,927); East St. Louis (82,295); Springfield (81,628).
 State forests: 3 (10,278 ac.).
 State parks, memorials, conservation areas: 74 (37,447 ac.).
 State revenue (1957): \$875,240,057.
 State expenditure (1957): \$837,291,710.
 Illinois anchors the Midwest like a rich giant, versatile in every big wealth-making industry. It stands high in manufacturing, coal mining, farm cash income, oil production. The sprawling Chicago district (including a slice of Indiana) is a great iron

and steel producer, meat packer, grain exchange and railroad center. Chicago is also a busy long-flight airport city and Great Lakes port area. The Illinois sand and gravel business is exceeded only by that of California.

In agriculture, Illinois is first in soy beans and high in corn, oats, wheat, barley, rye, potatoes and truck vegetables. Hog raising and dairying are important industries of the state.

Illinois manufactures almost everything. Railroad cars, clothing, furniture, tractors, liquor, watches and farm implements are some of the items made in several of its cities. An important U. S. arsenal is located on a Mississippi island off Rock Island.

Central Illinois is noted for shrines and memorials associated with the life and works of Abraham Lincoln, greatest son of Illinois. In Springfield are the Lincoln Home and Lincoln Tomb. At New Salem State Park, 20 miles northwest of Springfield, the reconstructed village of New Salem stands as a notable Lincoln memorial.

INDIANA

Capital: Indianapolis.

Governor: Harold W. Handley, Rep. (to Jan. 1961).

Organized as territory: May 7, 1800.

Entered Union & (rank): Dec. 11, 1816 (19).

Present constitution adopted: 1851.

Motto: The Crossroads of America.

State flower: Peony (1957).

State tree: Tulp tree (1931).

State bird: Cardinal (1933).

State song: "On the Banks of the Wabash, Far Away" (1913).

Nickname: Hoosier State.

Origin of name: Meaning "land of Indians."

1940 population & (rank): 3,427,796 (12).

1950 population & (rank): 3,934,224 (12).

1957 estimated population: 4,533,000.

Area & (rank): 36,291 sq. mi. (38).

Geographic center: In Boone Co., 14 mi. W of N of Indianapolis.

Number of counties: 92.

Largest cities (1950 Census): Indianapolis (427,173); Gary (133,911); Ft. Wayne (133,607); Evansville (128,636); South Bend (115,911).

State forests: 14 (113,880.46 ac.).

State parks: 18 (47,386.43 ac.).

State general revenue (1956-57): \$397,663,050.

State general expenditure (1956-57): \$422,777,987.

Indiana's fifty-one-mile Michigan waterfront is one of the great industrial centers of the world, turning out iron and steel and oil products to make this state a leader in manufacturing. Its cities have some of the world's largest industrial plants and their great output is further swelled by the inland factories. The list of products is endless—automobiles, farm implements, aviation and railroad equipment, sewing machines are made from iron ore mined in the Great Lakes region.

In farming the state stands high in soy beans, corn, tobacco, onions, wheat, oats, rye and tomatoes.

Indianapolis is the second largest U. S. city not on a navigable body of water. Wyandotte

Cave, the second largest in the U. S., is located in Crawford County of Southern Indiana. West Baden and French Lick are well known for their mineral springs. Indiana was one of the early states to adopt the secret ballot based on the Australian system.

IOWA

Capital: Des Moines.

Governor: Herschel C. Loveless, Dem. (to Jan. 1959).

Organized as territory: June 12, 1838.

Entered Union & (rank): Dec. 28, 1846 (29).

Present constitution adopted: 1857.

Motto: Our liberties we prize and our rights we will maintain.

State flower: Wild rose (1897).

State bird: Eastern goldfinch (1933).

State colors: Red, white and blue (in state flag).

State song: "Song of Iowa."

Nickname: Hawkeye State.

Origin of name: Probably from an Indian word meaning "I-o-w-a, this is the place."

1940 population & (rank): 2,538,268 (20).

1950 population & (rank): 2,621,073 (22).

1957 estimated population: 2,799,000.

Area & (rank): 56,280 sq. mi. (25).

Geographic center: In Marshall County, 2 1/2 mi. S of State Center.

Number of counties: 99.

Largest cities (1950 Census): Des Moines (177,965); Sioux City (83,991); Davenport (74,549); Cedar Rapids (72,296); Waterloo (65,198).

State forests: 7 (13,469 ac.).

State parks: 89 (28,437 ac.).

State general revenue (1956-57): \$152,040,936.

State general expenditure (1956-57): \$142,729,895.

Iowa stands in a class by itself as an agricultural state, supplying 10% of the nation's food supply. It ranks first in livestock income, value of beef marketed, production averages of oats and popcorn, and production of hogs, chickens, eggs, corn and timothy seed. Nearly 95% of the state's total acreage is in farms, and the fertility of its soil is unsurpassed. Of all the Grade A land in the country, 25% is in Iowa.

However, the value of Iowa's manufactured products exceeds that of her agricultural products. The top industrial activity is meat packing. Des Moines fittingly leads all cities in the publication of farm journals and is also a large insurance center.

Iowa has the highest functional literacy rate in the nation.

West Branch is the birthplace of Herbert Hoover, who was the first President of the U. S. to be born west of the Mississippi.

KANSAS

Capital: Topeka.

Governor: George Docking, Dem. (to Jan. 1959).

Organized as territory: May 30, 1854.

Entered Union & (rank): Jan. 29, 1861 (34).

Present constitution adopted: 1859.

Motto: *Ad astra per aspera* (To the stars through difficulties).

State flower: Sunflower (1903).
 State tree: Cottonwood (1937).
 State bird: Western meadow lark (1937).
 State animal: Buffalo (1955).
 State song: "Home on the Range" (1947).
 State march: "The Kansas March" (1935).
 Nicknames: Sunflower State; Jayhawk State.
 Origin of name: From a Siouan word meaning "people of the south wind."
 1940 population & (rank): 1,801,028 (29).
 1950 population & (rank): 1,905,299 (31).
 1957 estimated population: 2,136,000.
 Area & (rank): 82,276 sq. mi. (14).
 Geographic center: In Barton Co., 15 mi. NE of Great Bend.
 Number of counties: 105.
 Largest cities (1950 Census): Wichita (168,279); Kansas City (129,553); Topeka (78,791); Hutchinson (33,575); Salina (26,176).
 State forests: 1 (4,000 ac.).
 State parks: 22 (14,394 ac.).
 State operating revenue (1956-57): \$251,837,084.
 State operating expenditure (1956-57): \$263,663,-611.

Kansas finds its strength in wheat growing, flour milling and a variety of manufacturing enterprises. Slaughtering and meat packing are also extensively pursued. In the western part of the state, where Dodge City recalls the old days of cattle rustling, rich prairie land sprawls over a large area and gives an abundance of winter wheat and fine grazing.

Corn, sorghums, oats, barley, soy beans and potatoes are other crops. Besides oil, Kansas mines zinc, coal, salt and lead.

The state is the geographical center of the U. S., and the geodetic center of the North American continent.

Wichita, a growing industrial center, is a leader in the production of military and civilian aircraft. Kansas City is a transportation, milling, and meat-packing center.

After being dry since the Murray Liquor Law of 1881, Kansas repealed prohibition in March 1949.

Points of unusual interest in Kansas include: President Eisenhower's boyhood home and the new Eisenhower Memorial Museum at Abilene; the geographic center of the U. S. at Lebanon; John Brown's well-preserved cabin at Osawatimie; and two historic military reservations—Ft. Leavenworth and Ft. Riley.

KENTUCKY

Capital: Frankfort.
 Governor: A. B. Chandler, Dem. (to Dec. 1959).
 Entered Union & (rank): June 1, 1792 (15).
 Present constitution adopted: 1891.
 Motto: United we stand, divided we fall.
 State flower: Goldenrod.
 State bird: Kentucky cardinal.
 State song: "My Old Kentucky Home."
 Nickname: Blue Grass State.
 Origin of name: From an Iroquoian Indian word "Ken-tah-ten" meaning "land of tomorrow."
 1940 population & (rank): 2,845,627 (16).
 1950 population & (rank): 2,944,806 (19).
 1957 estimated population: 3,040,000.
 Area & (rank): 40,395 sq. mi. (37).

Geographic center: In Marion Co., 3 mi. W of N of Lebanon.

Number of counties: 120.

Largest cities (1950 Census): Louisville (369,-129); Covington (64,452); Lexington (55,-534); Owensboro (33,651); Paducah (32,-828).

State forests: 3 (30,022 ac.).

State parks: 26 (16,888 ac.).

Total state revenue (1956-57): \$273,071,629.

Total state expenditure (1956-57): \$269,283,106.

Kentucky prides itself on producing some of the nation's best tobacco, horses and whisky. It stands high in the production of native asphalt, hemp, coal, corn, oil.

Among the manufactured items produced by its cities are furniture, aluminum ware, brooms, shoes, lumber products, machinery, textiles and iron and steel products. Besides coal and oil, important minerals are natural gas and quarry products.

Louisville, the largest city, famed for the Kentucky Derby at Churchill Downs, has a large municipal university, distills whisky and is a great cigarette maker. The Blue Grass country is the home of some of the world's finest race horses. Lexington, standing in the center of this country, is a leading tobacconist. Mammoth Cave, with its many miles of underground passages, is one tourist attraction. Another is Kentucky Lake, 184 miles wide, one of the largest man-made bodies of water in the world.

Kentucky was credited with a star in the Confederate flag because a secessionist group in the southwest part of the state set up a short-lived government and joined the Confederacy. The legitimate government, however, remained in the Union throughout the Civil War.

Marquette and Joliet in 1673 saw Kentucky when it was the "Dark and Bloody Ground," fiercely contested by Indian tribes. Daniel Boone explored the country in 1767.

LOUISIANA

Capital: Baton Rouge.

Governor: Earl K. Long, Dem. (to May 1960).

Organized as territory: Mar. 26, 1804.

Entered Union & (rank): Apr. 30, 1812 (18).

Seceded from Union: Jan. 26, 1861.

Re-entered Union: May 26, 1865.

Present constitution adopted: 1921.

Motto: Union, justice and confidence.

State flower: Magnolia (1900).

State bird: Pelican (unofficial).

State song: "Song of Louisiana."

Nicknames: Pelican State; Creole State; Sugar State.

Origin of name: In honor of Louis XIV of France.

1940 population & (rank): 2,363,880 (21).

1950 population & (rank): 2,683,516 (21).

1957 estimated population: 3,068,000.

Area & (rank): 48,523 sq. mi. (31).

Geographic center: In Avoyelles Parish, 3 mi. SE of Marksville.

Number of parishes (counties): 64.

Largest cities (1950 Census): New Orleans (570,445); Shreveport (127,206); Baton Rouge (125,629); Lake Charles (41,272); Monroe (38,572).

State forests: 1 (8,000 ac.).
 State parks: 15 (13,323 ac.).
 State general revenue (1956-57): \$585,676,498.
 State general expenditure (1956-57): \$576,966,961.

Louisiana, which still calls its counties parishes after the Spanish religious divisions, is one of the leading states in fur trapping, with a rich annual bag of mink, muskrat, opossum and raccoon pelts. Other important agricultural products are sugar cane, sweet potatoes, rice and cotton. The state is rapidly becoming industrialized, and is an important producer of petroleum and petrochemicals, pulp and paper, natural gas, sulfur, chemicals and salt.

New Orleans, home of the Mardi Gras, avoids flooding only by an expensive levee and spillway system. Its industry is making increased use of raw materials from South and Central America. The Vieux Carré, in this Old World city, called by many the "Little Paris" of the New World, has some of the celebrated restaurants of the nation.

Louisiana has a great variety and abundance of game birds. Its state-owned wildlife sanctuaries are among the world's largest.

Hernando de Soto, in the year 1540, is usually considered the first white man to see the state, but claims are made for Narvaez, who is reputed to have seen the state as early as 1528.

MAINE

Capital: Augusta.
 Governor: Edmund S. Muskie, Dem. (to Jan. 1959).
 Entered Union & (rank): Mar. 15, 1820 (23).
 Present constitution adopted: 1820.
 Motto: *Dirigo* (I guide).
 State flower: White pine cone and tassel (1895).
 State tree: Pine tree.
 State bird: Chickadee (1927).
 State song: "State of Maine Song" (1937).
 Nickname: Pine Tree State.
 Origin of name: From the French province of Mayne.
 1940 population & (rank): 847,226 (35).
 1950 population & (rank): 913,774 (35).
 1957 estimated population: 943,000.
 Area & (rank): 33,215 sq. mi. (39).
 Geographic center: In Piscataquis Co., 18 mi. N of Dover-Foxcroft.
 Number of counties: 16.
 Largest cities (1950 Census): Portland (77,634); Lewiston (40,974); Bangor (31,558); Auburn (23,134); South Portland (21,866).
 State forests: 1 (21,000 ac.).
 State parks: 6 (133,042 ac.).
 State general revenue (1957): \$102,885,254.
 State general expenditure (1957): \$96,351,815.

Two major changes in Maine's constitution were voted in 1957: (1) the state's general election is now held in November instead of September, making the expression "As Maine goes so goes the nation" no longer valid, and (2) the governor now has a 4-year term and may succeed himself.

Maine produces one out of every seven potatoes raised in the U. S., and 95% of the

nation's blueberries. The chicken broiler industry has climbed from \$300,000 after the last war to \$37 million today.

Maine is one of the world's largest pulp, paper producers. It ranks fifth in boot and shoe manufacturing. It has the largest forest area in the East, and planned cutting promises an unending wood supply for pulp, paper mills, lumber mills and hardwood processing plants.

The state leads the world in the production of the familiar flat tins of sardines, producing 200 million of them normally. Lobstermen catch 90% of the nation's total of true lobsters.

Of great importance is the state's vacation business, which amounts to over \$250 million annually. Visitors are drawn by the state's 2,500 lakes, 5,000 rivers and streams and 2,500 tidewater miles of coastline.

MARYLAND

Capital: Annapolis.
 Governor: Theodore R. McKeldin, Rep. (to Jan. 1959).
 Entered Union & (rank): Apr. 28, 1788 (7).
 Present constitution adopted: 1867.
 Motto: *Fatti maschii, parole femine* (Manly deeds, womanly words).
 State flower: Black-eyed susan (1918).
 State tree: White oak (1941).
 State bird: Baltimore oriole (1882).
 State song: "Maryland! My Maryland!" (1939).
 Nicknames: Free State; Old Line State.
 Origin of name: In honor of Henrietta Maria (Queen of Charles I of England).
 1940 population & (rank): 1,821,244 (28).
 1950 population & (rank): 2,343,001 (24).
 1957 estimated population: 2,895,000.
 Area & (rank): 12,303 sq. mi. (42).
 Geographic center: In Anne Arundel Co., 3 mi. E of Collington.
 Number of counties: 23, plus 1 independent city.
 Largest cities (1950 Census): Baltimore (949,708); Cumberland (37,679); Hagerstown (36,260); Frederick (18,142); Salisbury (15,141); Annapolis (10,047).
 State forests: 10 (118,978 ac.).
 State parks: 15 (13,535 ac.).
 State general revenue (1957): \$557,416,598.
 State general expenditure (1957): \$561,724,475.

Maryland is cut almost in two by Chesapeake Bay, and the many estuaries and rivers create one of the longest water fronts of any state. The Bay produces more seafood—oysters, crabs, clams, fin fish—than any comparable body of water, and is a major crabbing center. Important agricultural products are vegetables, tobacco, corn, wheat, soy beans, and dairy products. Maryland is a leader in vegetable canning and broiler raising. Sand and gravel, stone, coal, and clay are the chief mineral products.

Manufactures, which center in Baltimore include airplanes, steel, clothing, and chemicals. The port of Baltimore ranks second in the country in foreign trade tonnage. Baltimore is the home of the Johns Hopkins University and Hospital. In Annapolis, Stat

capital and home of the U. S. Naval Academy, is one of the earliest state houses (1772-1779) still in regular use by a State government.

The Charter of Maryland was granted in 1632 to Lord Baltimore, who died before it had passed the Great Seal; it was issued to his oldest son, Cecil. The first settlers landed at St. Mary's in 1634.

MASSACHUSETTS

Capital: Boston.

Governor: Foster Furcolo, Dem. (to Jan. 1959).

Entered Union & (rank): Feb. 6, 1788 (6).

Present constitution adopted: 1780.

Motto: *Ense petit placidam sub libertate quietem* (By the sword we seek peace, but peace only under liberty).

State flower: Mayflower (1918).

State tree: American elm (1941).

State bird: Chickadee (1941).

State colors: Blue and gold (in flag and shield).

State song: None.

Nicknames: Bay State; Old Colony State.

Origin of name: From two Indian words meaning "great mountain place."

1940 population & (rank): 4,316,721 (8).

1950 population & (rank): 4,690,514 (9).

1957 population: 4,866,000.

Area & (rank): 8,257 sq. mi. (45).

Geographic center: In Worcester Co., in N part of city of Worcester.

Number of counties: 14.

Largest cities (1955 State Census): Boston (724,702); Worcester (202,612); Springfield (166,052); New Bedford (105,488); Fall River (105,195).

State forests: 70 (170,000 ac.).

State parks: 21 (7,927 ac.).

State general revenue (1957): \$541,754,403.

State general expenditure (1957): \$566,506,194.

Massachusetts is the leading shoe producer in the U. S., and has been one of the leaders in the making of textiles since the beginning of American history. Top-ranking industries are electrical and other machinery, textile mill products, leather and leather products, and apparel and other finished goods. Logan International Airport at East Boston, the nearest point in the U. S. to Europe, ranks among the world's greatest aerodromes. It has one of the longest commercial runways (10,022 ft.) and the longest air passenger terminal building in the world (3,053 ft.).

The most valuable agricultural products, ranked in order of importance, are hay, tobacco, cranberries, apples, potatoes, corn and tomatoes. There is also a large livestock industry, especially poultry, and a nursery industry, especially carnations.

The growth of factories brought to this state an influx of foreigners and today Boston has one of the largest Irish populations in the nation. Boston became prominent as the "Cradle of Liberty" in early days and it was here that Paul Revere rode from Christ Church on Copp's Hill and the Battle of Bunker Hill was fought.

The Pilgrims landed at Plymouth Rock in 1620 as the first large group to settle here but legend has it that Eric the Red and his foremen saw the state in the year 1000.

MICHIGAN

Capital: Lansing.

Governor: G. Mennen Williams, Dem. (to Jan. 1959).

Organized as territory: Jan. 11, 1805.

Entered Union & (rank): Jan. 26, 1837 (26).

Present constitution adopted: 1908.

Motto: *Si quaeris peninsulam amoenam circumspice* (If you seek a pleasant peninsula, look around you).

State flower: Apple blossom (1897).

State bird: Robin (unofficial).

State animal: Wolverine (unofficial).

State song: "Michigan, My Michigan" (unofficial).

Nickname: Wolverine State.

Origin of name: From two Indian words meaning "great lake."

1940 population & (rank): 5,256,106 (7).

1950 population & (rank): 6,371,766 (7).

1957 estimated population: 7,803,000.

Area & (rank): 58,216 sq. mi. (23).

Geographic center: In Wexford Co., 5 mi. W of N of Cadillac.

Number of counties: 83.

Largest cities (1950 Census): Detroit (1,849,568); Grand Rapids (176,515); Flint (163,143); Dearborn (94,994); Saginaw (92,918).

State forests: 23 (3,744,082 ac.).

State parks: 60 (178,991 ac.).

State general revenue (1956-57): \$949,158,239.

State general expenditure (1956-57): \$1,020,666,414.

On a map of Michigan, draw an eighty-five-mile circle around Detroit and it will contain the home plants of the companies that make nine out of ten American automobiles. This industry, which sprang up about fifty years ago from the carriage-building business, is not the only activity of this state. Airplane parts, furniture (Grand Rapids is the furniture center of the U. S.), diesel engines, hoists, pumps, boilers are among its leading items of production. Most of the nation's refrigerators are made in Michigan. On its farms are grown dry beans, grapes, peaches, potatoes, sugar beets and other food crops.

Michigan is the only state that is split completely in two parts. The northern peninsula is mining and timber country. The southern part is agricultural and manufacturing country. Connecting Lakes Superior and Huron is the busiest canal in the world—the Sault Ste. Marie. Its 11,037 inland lakes and 2,242 miles of Great Lakes shoreline make Michigan a good vacation land.

Michigan has the greatest inland fisheries in the world and markets at least 20 species from carp, trout, perch, pike to lake herring. The artificial ski jump on Iron Mountain is probably the highest in the world.

MINNESOTA

Capital: St. Paul.

Governor: Orville L. Freeman, Dem. (to Jan. 1959).

Organized as territory: Mar. 3, 1849.

Entered Union & (rank): May 11, 1858 (32).

Present constitution adopted: 1858.

Motto: *L'Etoile du Nord* (The North Star).
State flower: Moccasin flower (1902).
State tree: Norway pine.
State bird: None.
State song: "Hall Minnesota."
Nicknames: North Star State; Gopher State; Land of 10,000 Lakes.
Origin of name: From a Dakota Indian word meaning "sky-tinted water."
1940 population & (rank): 2,792,300 (18).
1950 population & (rank): 2,982,483 (18).
1957 estimated population: 3,321,000.
Area & (rank): 84,068 sq. mi. (12).
Geographic center: In Crow Wing Co., 10 mi. SW of Brainerd.
Number of counties: 87.
Largest cities (1950 Census): Minneapolis (521,718); St. Paul (311,349); Duluth (104,511); Rochester (29,885); St. Cloud (28,410).
State forests: 32 (2,037,065 ac.).
State parks: 61 (84,350 ac.).
State general revenue (1957): \$631,284,647.
State general expenditure (1957): \$632,620,007.

A few square miles of Northern Minnesota, in the Mesabi, Cuyuna and Vermilion Ranges, produce most of the nation's iron ore, and provide the activity for the port of Duluth. Farm and factory are equally important in Minnesota. Its farms produce oats, butter, eggs, milk, corn, wheat, potatoes, etc. Its factory production follows the pattern of the Midwest. Machinery, furniture, foundry products, etc. are manufactured.

Minneapolis is the trade center of the Northwest. Its twin city St. Paul is the nation's biggest publisher of calendars and law books.

With over 11,000 lakes, the state is famous for its fishing, hunting and trapping.

Minnesota has many famous resort regions. Travel business for 1957 was estimated to exceed \$300 million.

In 1655, Radisson and Groseilliers, French traders from Canada, were the first white men to see the state.

MISSISSIPPI

Capital: Jackson.
Governor: J. P. Coleman, Dem. (to Jan. 1960).
Organized as territory: Apr. 7, 1798.
Entered Union & (rank): Dec. 10, 1817 (20).
Seceded from Union: Jan. 9, 1861.
Re-entered Union: Feb. 23, 1870.
Present constitution adopted: 1890.
Motto: *Virtute et armis* (By valor and arms).
State flower: Flower or bloom of the magnolia or evergreen magnolia (1952).
State tree: Magnolia (1938).
State bird: Mockingbird (1944).
State song: "Way Down South in Mississippi" (1948).
Nickname: Magnolia State.
Origin of name: From an Indian word meaning "Father of Waters."
1940 population & (rank): 2,183,796 (23).
1950 population & (rank): 2,178,914 (26).
1957 estimated population: 2,185,000.

Area & (rank): 47,716 sq. mi. (32).
Geographic center: In Leake Co., 9 mi. N of W of Carthage.
Number of counties: 82.
Largest cities (1950 Census): Jackson (98,271); Meridian (41,893); Biloxi (37,425); Greenville (29,936); Hattiesburg (29,474).
State forests: 1 (1,760 ac.).
State parks: 10 state-owned (10,972 ac.); 2 state-leased (1,910 ac.).
State general revenue (1957): \$213,291,403.
State general expenditure (1957): \$210,780,245.

Mississippi, the stronghold of the Old South, has until the past decade been one of the least industrialized states, with more than half its population making a living from the soil. A recent program of industrialization, however, has attracted numerous manufacturing concerns. Cotton, nevertheless, is still king. The world's largest cotton plantation of 35,000 acres is located at Scott. Other crops are corn, peanuts, oats, pecans, soybeans, rice, tung nuts, sugar cane and hay. There is a yearly income of \$356 million from forests and forest derivatives.

Mississippi's Central Hills have produced a serious soil-erosion problem due to the over-emphasis placed on cotton growing through the years. Introduction of livestock and dairying and the pasture improvement programs attendant to it have helped in recent years to remedy this situation.

Mississippi was first to ratify the 18th Amendment and is still one of the two states (the other, Oklahoma) that bans the sale of hard liquor. In 1950, it had the third largest Negro population in the U. S.

The state abounds in historical landmarks and is the home of the Vicksburg National Military Park commemorating Grant's victory

MISSOURI

Capital: Jefferson City.
Governor: James T. Blair, Jr., Dem. (to Jan. 1961).
Organized as territory: June 4, 1812.
Entered Union & (rank): Aug. 10, 1821 (24).
Present constitution adopted: 1945.
Motto: *Salus populi suprema lex esto* (The welfare of the people shall be the supreme law).
State flower: Hawthorn (1923).
State bird: Bluebird (1927).
State colors: Red, white and blue (1913).
State song: "Missouri Waltz" (1949).
State tree: Dogwood (1955).
Nickname: Show-me State.
Origin of name: From an Indian word probably meaning "muddy water."
1940 population & (rank): 3,784,664 (10).
1950 population & (rank): 3,954,653 (11).
1957 estimated population: 4,255,000.
Area & (rank): 69,226 sq. mi. (19).
Geographic center: In Miller Co., 20 mi. SW of Jefferson City.
Number of counties: 114, plus 1 independent city.
Largest cities (1950 Census): St. Louis (856,796); Kansas City (456,622); St. Joseph (78,588); Springfield (66,731); University City (39,892).
State forests: 8 (163,000 ac.).

State parks: 30 (70,000 ac.).
 State general revenue (1956-57): \$426,063,783.
 State general expenditure (1956-57): \$416,195,121.

Missouri, touching both South and North, ranks highest in mining lead, making corn-cob pipes and breeding mules. Sometimes called the "saddle horse capital of the world" because of its excellent breeds, this state also grows corn, wheat, oats, barley, potatoes, tobacco and cotton on its fertile table land climbing to the Ozark Mountains. This country of rugged, timbered hills and deep valleys, has more than 10,000 swift-flowing streams. It produces automobiles, shoes, drugs, chemicals, beer and street cars.

Eads Bridge, spanning the Mississippi River at St. Louis, probably handles more freight cars than any other bridge in the world. Bagnell Dam, across the Osage River in the Ozarks, completed in 1931, created one of the largest artificial lakes in the world, running for 129 miles and having a shoreline that extends for approximately 1,300 miles.

The homes of two of Missouri's most publicized sons—Mark Twain and Jesse James—are tourist attractions.

Missouri, like Kentucky, had a star in the Confederate flag because a minority of the state legislature adopted an ordinance of secession. The Governor and pro-secession legislature, however, were ousted and the state remained in the Union.

MONTANA

Capital: Helena.
 Governor: J. Hugo Aronson, Rep. (to Jan. 1961).

Organized as territory: May 26, 1864.
 Entered Union & (rank): Nov. 8, 1889 (41).
 Present constitution adopted: 1889.
 Motto: *Oro y plata* (Gold and silver).
 State flower: Bitterroot (1895).
 State tree: Ponderosa pine (1949).
 State bird: Western meadow lark (1931).
 State song: "Montana" (1945).
 Nickname: Treasure State.
 Origin of name: Chosen from Mexican dictionary by J. M. Ashley. It is a Mexicanized Spanish word.

1940 population & (rank): 559,456 (39).
 1950 population & (rank): 591,024 (42).
 1957 estimated population: 666,000.
 Area & (rank): 147,138 (4).
 Geographic center: In Fergus Co., 12 mi. W of Lewistown.

Number of counties: 56, plus small part of Yellowstone National Park.
 Largest cities (1950 Census): Great Falls (39,214); Butte (33,251); Billings (31,834); Missoula (22,485); Helena (17,581).
 State forests: 7 (686,000 ac.).
 State parks: 14 (2,802 ac.).
 State general revenue (1956-57): \$126,653,152.
 State general expenditure (1956-57): \$122,894,680.

Montana's story is the old Western story—few settlers until a gold strike in 1858 brought an influx. Mining is its present occupation, and lead, zinc, silver, coal and oil are taken from its earth.

Butte, sitting on the "richest hill in the world," is the center of the area that once supplied half of the U. S. copper (its most important mineral). Livestock, wool, lumber and dude ranching round out its interests. Agriculture is dependent on irrigation.

The state as a whole still possesses the frank character of the old days, reflected in the legend that the only reason Helena was selected as the name to replace Last Chance Gulch was because of the suggestion of profanity in the front part of that name. Glacier National Park is a popular tourist area with its rugged scenery, hunting areas and dude ranches. While little development has been made, Montana offers fine potentialities for winter sports.

NEBRASKA

Capital: Lincoln.
 Governor: Victor E. Anderson, Rep. (to Jan. 1959).

Organized as territory: May 30, 1854.
 Entered Union & (rank): Mar. 1, 1867 (37).
 Present constitution adopted: 1875.
 Motto: Equality before the law.
 State flower: Goldenrod (1895).
 State tree: American elm (1937).
 State bird: Western meadow lark (1929).
 State song: "My Nebraska" (unofficial).
 Nickname: Cornhusker State.
 Origin of name: From an Oto Indian word meaning "flat water."
 1940 population & (rank): 1,315,834 (32).
 1950 population & (rank): 1,325,510 (33).
 1957 estimated population: 1,452,000.
 Area & (rank): 77,407 sq. mi. (15).
 Geographic center: In Custer Co., 10 mi. NW of Broken Bow.
 Number of counties: 93.
 Largest cities (1950 Census): Omaha (251,117); Lincoln (98,884); Grand Island (22,682); Hastings (20,211); North Platte (15,433).

State forests: 2.
 State parks: 7 (1,036 ac.).
 State general revenue (1957): \$116,495,930.
 State general expenditure (1957): \$116,495,930.

Nebraska lives by its expansive sea of grain, reflected in its bumper crops of rye, corn and wheat. There are more varieties of grass growing in this state, valuable for forage, than in any other state in the nation. Its sizable cattle and hog industries help to make Omaha a great stockyard and meat-packing center. Flour, freight cars, farm machinery, precision instruments, brick and tile are products of Nebraska.

Oil was discovered in 1939, and natural gas in 1949. The state was 14th in oil production in the U. S. for 1956.

In 1937, Nebraska became the only state in the Union to have a unicameral (one-house) legislature. Members are elected to it without party designation.

NEVADA

Capital: Carson City.
 Governor: Charles H. Russell, Rep. (to Jan. 1959).

Organized as territory: Mar. 2, 1861.
 Entered Union & (rank): Oct. 31, 1864 (36).

Present constitution adopted: 1864.

Motto: All for our country.

State flower: Sagebrush (1917).

State tree: Pinyon pine (official).

State bird: Mountain bluebird (unofficial).

State colors: Blue and silver (unofficial).

State song: "Home Means Nevada" (1933).

Nicknames: Sagebrush State; Silver State; Battle Born State.

Origin of name: Spanish: meaning "snow-clad."

1940 population & (rank): 110,247 (48).

1950 population & (rank): 160,083 (48).

1957 estimated population: 267,000.

Area & (rank): 110,690 (7).

Geographic center: In Lander Co., 23 mi. SE of Austin.

Number of counties: 17.

Largest cities (1950 Census): Reno (32,497); Las Vegas (24,624); Sparks (8,203); Elko (5,393); North Las Vegas (3,875).

State forests: None.

State parks: 9 (11,337 ac.).

State general revenue (1957): \$65,779,365.

State general expenditure (1957): \$62,985,539.

Nevada, the smallest state in population, had in 1950 about one and one-half persons per square mile. It was made famous by the discovery of the fabulous Comstock Lode in 1859, and its mines have produced large quantities of gold, silver, copper, lead, zinc, quicksilver and tungsten. Oil was discovered in Feb. 1954. There are also uranium deposits.

In 1931, the state created a new industry by writing an easy divorce law and Reno has since become the "divorce capital of the nation." Gambling was legalized and the gaming tables now pay a tax to add to the state's income.

Near Las Vegas, on the Colorado River, stands the Hoover Dam which has twice changed its name (Hoover to Boulder to Hoover).

The state's agricultural crop consists mainly of hay, wheat, barley and potatoes.

Nevada was the first state to use gas for capital punishment.

NEW HAMPSHIRE

Capital: Concord.

Governor: Lane Dwinell, Rep. (to Jan. 1959).

Entered Union & (rank): June 21, 1788 (9).

Present constitution adopted: 1784.

Motto: Live free or die.

State flower: Purple lilac (1919).

State tree: White birch (1947).

State bird: Purple finch (1957).

State song: "Old New Hampshire" (1949).

Nickname: Granite State.

Origin of name: From the English county of Hampshire.

1940 population & (rank): 491,524 (45).

1950 population & (rank): 533,242 (44).

1957 estimated population: 572,000.

Area & (rank): 9,304 sq. mi. (44).

Geographic center: In Belknap Co., 3 mi. E of Ashland.

Number of counties: 10.

Largest cities (1950 Census): Manchester (82,-

732); Nashua (34,669); Concord (27,988); Portsmouth (18,830); Berlin (16,615).

State forests: 143 (55,769 ac.).

State parks: 33 (30,976 ac.).

State general revenue (1957): \$55,287,359.

State general expenditure (1957): \$69,236,244.

New Hampshire is the only state that ever played host at the formal conclusion of a foreign war when, in 1905, Portsmouth was the scene of the treaty ending the Russo-Japanese War. The sandy and stony loam of this state needs liberal fertilization for the growing of its principal crops—fruit, truck vegetables, corn, oats, hay and potatoes. Its chief manufacturing is the production of textiles, leather goods, pulp and paper products.

New Hampshire was the first state to declare its independence from Great Britain, and to adopt a constitution. Mt. Washington has recorded some of the world's strongest wind velocities, the last recording of record proportions being registered at 231 miles per hour. The state also has the largest legislative body; it varies from 375 to 400.

With 1,300 lakes and good climate for both winter sports and summer vacations, the state is highly popular as a resort area.

NEW JERSEY

Capital: Trenton.

Governor: Robert B. Meyner, Dem. (to Jan. 1962).

Entered Union & (rank): Dec. 18, 1787 (3).

Present constitution adopted: 1947.

Motto: Liberty and prosperity.

State flower: Purple violet (1913).

State bird: Eastern goldfinch (1935).

State tree: Red oak (1950).

State colors: Blue and gold.

State song: None.

Nickname: Garden State.

Origin of name: From the Channel Isle of Jersey.

1940 population & (rank): 4,160,165 (9).

1950 population & (rank): 4,835,329 (8).

1957 estimated population: 5,627,000.

Area & (rank): 8,204 sq. mi. (46).

Geographic center: In Mercer Co., 5 mi. SE of the State capitol.

Number of counties: 21.

Largest cities (1950 Census): Newark (438,776).

Jersey City (299,017); Paterson (139,336).

Trenton (128,009); Camden (124,555).

State forests: 11 (155,114 ac.).

State parks: 23 (26,825 ac.).

State general revenue (1956-57): \$531,072,678.

State general expenditure (1956-57): \$539,085,135.

New Jersey, situated in an area of wide industrial diversification between the major markets of Philadelphia and New York, is known as the crossroads of the East. Products from over 15,000 factories and shops can be delivered overnight to about 52 million people, representing 12 states and the District of Columbia. The greatest single industry is chemicals, and New Jersey is one of the foremost research centers of the world. Oil refining and shipbuilding are represented at Linden and Camden by some of the largest installations of their kind.

Of the total land area, 43% is forested and nearly 35% is devoted to agriculture. The state rates high in practically all garden vegetables. Among its fruit crops are the famous cultivated blueberries, which originated in New Jersey. The poultry industry is one of the principal phases of the state's agriculture, and dairying occupies a prominent place.

The oldest U. S. highway of any length was built in Sussex County. The New Jersey Turnpike links New York, Pennsylvania and Delaware. Its new span at Florence over the Delaware River connects with the Pennsylvania Turnpike, giving motorists an uninterrupted road from New York to Chicago. Garden State Parkway (toll) is now open from Cape May to the N. Y. Thruway (173 mi.).

Its fortunate topography and geographic location make New Jersey a popular resort state with over 100 resort areas.

NEW MEXICO

Capital: Santa Fe.

Governor: Edwin L. Mechem, Rep. (to Jan. 1959).

Organized as territory: Sept. 9, 1850.

Entered Union & (rank): Jan. 6, 1912 (47).

Present constitution adopted: 1912.

Motto: *Crescit eundo* (It grows as it goes).

State flower: Yucca (1927).

State tree: Piñon (1949).

State bird: Road runner (1949).

State fish: Cutthroat trout (1955).

State colors: Flaming red and golden orange (1915).

State song: "O, Fair New Mexico" (1916).

Nicknames: Land of Enchantment; Sunshine State.

Origin of name: From the country of Mexico.

1940 population & (rank): 531,818 (42).

1950 population & (rank): 681,187 (39).

1957 estimated population: 891,300.

Area & (rank): 121,666 sq. mi. (5).

Geographic center: In Torrance Co., 12 mi. W of S of Willard.

Number of counties: 32.

Largest cities (1950 Census): Albuquerque (96,815); Santa Fe (27,998); Roswell (25,738); Carlsbad (17,975); Clovis (17,318).

State forests: None.

State parks: 6 (16,018 ac.).

State general revenue (1957): \$186,364,000.

State general expenditure (1957): \$173,512,000.

New Mexico's chief industries are mining and the raising of cattle and crops. Irrigation is vital.

The state contains the largest Indian reservation in the U. S. with over 16,000,000 acres, inhabited by the Navajo tribe. The Apaches and Utes live in three other reservations in this state (the Jicarilla Apache, at Horse Lake; the Mescalero Apache, northeast of Alamogordo; the Navajo, in San Juan and McKinley counties; and the Southern Ute, in the northern part of San Juan County). Carlsbad Caverns, the largest in the world, attract many visitors annually. The highest golf course in the world, over 9,000 feet above sea level, is near Alamogordo.

The state's dry and healthful climate makes it a great recuperative mecca for tuberculars. Santa Fe, the oldest seat of government in the U. S., was founded by the Spaniards in 1609-10.

Los Alamos is the site of an atomic-energy laboratory. The first atomic explosion in history was at the Alamogordo air base.

NEW YORK

Capital: Albany.

Governor: W. Averell Harriman, Dem. (to Jan. 1959).

Entered Union & (rank): July 26, 1788 (11).

Present constitution adopted: 1777 (last revised 1938).

Motto: *Excelsior* (Ever Upward).

State flower: Rose (1955).

State tree: Sugar maple (1956).

State bird: Bluebird (unofficial).

State song: None.

Nickname: Empire State.

Origin of name: In honor of the English Duke of York.

1940 population & (rank): 13,479,142 (1).

1950 population & (rank): 14,830,192 (1).

1957 estimated population: 15,888,000.

Area & (rank): 49,576 sq. mi. (30).

Geographic center: In Madison Co., 6 mi. E of S of Oneida.

Number of counties: 62.

Largest cities (1950 Census): New York (7,891,957); Buffalo (580,132); Rochester (332,488); Syracuse (220,583); Yonkers (152,798).

State Forest Preserves: Adirondacks, 2,250,054 ac.; Catskills, 235,116 ac.

State parks: 82 (199,500 ac., including parkways).

State general fund income (1957): \$1,390,649,697.

State general fund outgo (1957): \$1,390,379,997.

New York, with the great metropolis of New York City, is the spectacular nerve center of the nation. It leads in population, manufacturing, foreign trade, commercial and financial transactions, book and magazine publishing, theatrical production, etc.

New York City is not only a national but an international leader. It is the busiest seaport in the world; New York International Airport is the largest in the world. First in manufacturing since 1824, the city today has a gigantic clothing and fur industry and also makes chemicals, paints, drugs, machinery, paper, wood and textile products and houses the tallest buildings in the world. Nearly all the rest of the state's manufacturing is done along the Hudson River north to Albany and through the Mohawk Valley, Central New York and Southern Tier regions to Buffalo. The vast St. Lawrence seaway and power projects are opening the state's North Country to industrial expansion. Planes, heavy and light electrical equipment, locomotives, radio and TV sets, auto bodies and parts, washing machines, typewriters, photographic and optical equipment, shirts and flour are manufactured. Dairying, truck gardening, and the raising of potatoes, onions and cabbage keep the New York farmer prosperous. Winemaking is a major industry in the state.

New York's extremely rapid commercial

growth may be partly attributed to Governor De Witt Clinton who pushed through the construction of the Erie Canal (Buffalo to Albany) which was opened in 1825. Today, the 500-mile N. Y. Thruway connects New York City with Buffalo and the Pennsylvania border.

The convention and tourist business is the state's fifth greatest source of income.

For a short time, New York City was the U. S. Capital and George Washington was inaugurated there as the first President on April 30, 1789.

Henry Hudson explored New York in 1609 in his trip up the river later named in his honor. On the basis of his explorations, the Dutch bought the island of Manhattan for \$24 from the Indians in 1626.

NORTH CAROLINA

Capital: Raleigh.

Governor: Luther H. Hodges, Dem. (to Jan. 1961).

Entered Union & (rank): Nov. 21, 1789 (12).

Seceded from Union: May 20, 1861.

Re-entered Union: July 20, 1868.

Present constitution adopted: 1876.

Motto: *Esse quam videri* (To be rather than to seem) (1893).

State flower: Dogwood (1941).

State bird: Cardinal (1943).

State song: "The Old North State" (1927)

State colors: red and blue (1945).

Nickname: Tar Heel State.

Origin of name: In honor of Charles I of England.

1940 population & (rank): 3,571,623 (11).

1950 population & (rank): 4,061,929 (10).

1957 estimated population: 4,498,000.

Area & (rank): 52,712 sq. mi. (28).

Geographic center: In Chatham Co., 10 mi. NW of Sanford.

Number of counties: 100.

Largest cities (1950 Census): Charlotte (134,042); Winston-Salem (87,811); Greensboro (74,389); Durham (71,311); Raleigh (65,679).

State forests: 1.

State parks: 11 (35,628 ac.).

State revenue (all funds) (1956-57): \$411,727,701.

State expenditure (all funds) (1956-57): \$384,080,514.

North Carolina is the nation's largest tobaccoist and textile producer. It holds first place in the Southeast in population and in the value of its industrial and agricultural production. This production is highly diversified, with furniture, chemicals and paper constituting enormous industries. Tobacco, corn, cotton, hay, peanuts and truck and vegetable crops are of major importance.

The state leads the South in social and economic reforms. Its educational pay scale is the same for white and Negro teachers.

There are 18 state and national parks and forests, including the Great Smoky Mountains National Park, the Blue Ridge Parkway and the new Cape Hatteras National Seashore. Mt. Mitchell, on the Parkway near Asheville, is the highest mountain in the Eastern U. S. (6,684 ft. above sea level).

The largest military reservation in the U. S. (Fort Bragg) and the largest Marine amphibious training base (Camp LeJeune) are in North Carolina.

The first English colony in America was established on Roanoke Island in 1585. Virginia Dare, born there in 1587, was the first child of English parentage born in America.

NORTH DAKOTA

Capital: Bismarck.

Governor: John E. Davis, Rep. (to Jan. 1959).

Organized as territory: Mar. 2, 1861.

Entered Union & (rank): Nov. 2, 1889 (39).

Present constitution adopted: 1889.

Motto: Liberty and union, now and forever: one and inseparable.

State flower: Wild prairie rose (1907).

State tree: American elm (1947).

State bird: Western meadow lark (1947).

State song: "North Dakota Hymn" (1947).

Nickname: Sioux State; Flickertail State.

Origin of name: From the Dakotah tribe, meaning "allies."

1940 population & (rank): 641,935 (39).

1950 population & (rank): 619,636 (41).

1957 estimated population: 644,000.

Area & (rank): 70,665 sq. mi. (17).

Geographic center: In Sheridan Co., 5 mi. SW of McClusky.

Number of counties: 53.

Largest cities (1950 Census): Fargo (38,256);

Grand Forks (26,836); Minot (22,032); Bismarck (18,640); Jamestown (10,697).

State forests: None.

State parks: 5 (2,981 ac.).

State collections (1957): \$98,573,957.

State disbursements (1957): 105,010,447.

North Dakota, politically progressive, operates the only state-owned bank, flour mill and grain elevator in the nation. The state owes its main activity to agriculture with over 87 per cent of its acreage devoted to the growth of barley, wheat, rye, oats and livestock. Most of its manufacturing consists of dairy products.

The finest farming land is in the Red River Valley, celebrated in song. Cattle raising is centered in the Missouri Valley.

"Number One Northern Hard," a wheat first grown in this state, still brings premium prices for its excellence of quality.

The completion of Garrison Dam on the Missouri River will result in extensive irrigation and the production of 400,000 kw. of electricity for use in the Missouri Basin areas.

In 1951, oil was discovered near Tloga by the Amerada Petroleum Corp. Geologists believe that the state holds two-thirds of the nation's lignite.

The geographic center of the North American continent is located in Pierce County latitude 48°10'N, longitude 100°10'W.

OHIO

Capital: Columbus.

Governor: C. William O'Neill, Rep. (to Jan. 1959).

Entered Union & (rank): Mar. 1, 1803 (17).

Present constitution adopted: 1851.

Motto: *Imperium in imperio* (An empire within an empire) (unofficial).
State flower: Scarlet carnation (1904).
State bird: Cardinal (1933).
State song: None.
Nickname: Buckeye State.
Origin of name: From an Iroquoian word meaning "great river."
1940 population & (rank): 6,907,612 (4).
1950 population & (rank): 7,946,627 (5).
1957 estimated population: 9,200,000.
Area & (rank): 41,222 sq. mi. (35).
Geographic center: In Delaware Co., 25 mi. N of Columbus.
Number of counties: 88.
Largest cities (1950 Census): Cleveland (914,808); Cincinnati (503,998); Columbus (375,901); Toledo (303,616); Akron (274,605).
State forests: 20 (145,281 ac.).
State parks: 55 (22,074 ac.).
State general revenue (1956-57): \$1,250,755,883.
State general expenditure (1956-57): \$1,238,567,565.

With vast coal and oil fields on the one hand, with Great Lakes iron ore close by on the other, Ohio automatically developed into one of the nation's greatest industrial states. The vast and varied factory output of its cities runs from wire, nails, nuts, bolts, paper, radios, cash registers, golf clubs, refrigerators to motors of all kinds and sizes. Cleveland is one of the world's largest handlers of iron ore. Toledo is the nation's largest shipper of coal. Akron makes most of the automobile tires used in the U. S.

Ohio's thousands of factories almost overshadow its importance in two other basic industries—mining and agriculture. Its fertile soil produces soy beans, corn, wheat, grapes and tobacco. Dairying and greenhouse products are important. Mining is centered in coal, oil, sand, gravel and clay.

Ohio has sent to the White House eight men, six of whom were elected from that state and two of whom were born in Ohio but elected from other states.

In 1749, Céleron, a French officer, reached the Ohio River from Canada and claimed the area for the French, disregarding the grants of the British Kings.

OKLAHOMA

Capital: Oklahoma City.
Governor: Raymond D. Gary, Dem. (to Jan. 1959).
Organized as territory: May 2, 1890.
Entered Union & (rank): Nov. 16, 1907 (46).
Present constitution adopted: 1907.
Motto: *Labor omnia vincit* (Labor conquers all things).
State flower: Mistletoe (1893).
State tree: Redbud (1937).
State bird: Scissor-tailed Flycatcher (1951).
State colors: Green and white (1915).
State song: "Oklahoma" (1953).
Nickname: Sooner State.
Origin of name: From two Choctaw Indian words meaning "red people."
1940 population & (rank): 2,336,434 (22).
1950 population & (rank): 2,233,351 (25).
1957 estimated population: 2,277,000.

Area & (rank): 69,919 sq. mi. (18).
Geographic center: In Oklahoma Co., 8 mi. N of Oklahoma City.
Number of counties: 77.
Largest cities (1950 Census): Oklahoma City (243,504); Tulsa (182,740); Muskogee (37,289); Enid (36,017); Lawton (34,757).
State forests: None.
State parks: 14 (47,813.42 ac.).
State general revenue (1957): \$354,754,316.
State general expenditure (1957): \$362,470,063.

Oil has made Oklahoma a rich state and Tulsa one of the world's wealthiest cities per capita. The smelting of zinc, oil refining, meat packing and flour milling are its chief factory industries. Wheat, corn, oats, cotton, sorghums and potatoes are its agricultural crops of chief importance.

In 1834, Oklahoma was set aside as Indian Territory. It remained so until Apr. 22, 1889, when the first opening to homestead settlement occurred. On that one day, 50,000 people swarmed in, and the term "sooners" was born to apply to those who had sneaked into the state sooner than the noon deadline. A series of land openings by "runs" and lotteries extended through 1901, and sales by sealed bid of remaining lands were held in 1906 and 1910.

The state is one of the two in the nation (the other is Mississippi) which prohibits the sale of hard liquor.

OREGON

Capital: Salem.
Governor: Robert D. Holmes, Dem. (to Jan. 1959).
Organized as territory: Aug. 14, 1848.
Entered Union & (rank): Feb. 14, 1859 (33).
Present constitution adopted: 1859.
Motto: The Union (1957).
State flower: Oregon grape (1899).
State tree: Douglas fir (1939).
State bird: Western meadow lark (1927).
State song: "Oregon, My Oregon" (1927).
Nickname: Beaver State.
Origin of name: Unknown. However, it is generally accepted that the name, first used by Jonathan Carver in 1778, was taken from the writings of Maj. Robert Rogers, an English army officer.
1940 population & (rank): 1,089,684 (34).
1950 population & (rank): 1,521,341 (32).
1957 estimated population: 1,769,000.
Area & (rank): 96,981 sq. mi. (10).
Geographic center: In Crook Co., 25 mi. E of S of Prineville.
Number of counties: 36.
Largest cities (1950 Census): Portland (373,628); Salem (43,140); Eugene (35,879); Medford (17,305); Corvallis (16,207).
State forests: 720,000 ac. in 16 counties.
State parks: 165 (57,797 ac.).
State general revenue (1957): \$280,666,000.
State general expenditure (1957): \$263,868,000.

Oregon, with the greatest U. S. reserve of standing timber, has a billion-dollar forestry industry. Its salmon fishing industry, centered at Astoria at the mouth of the Columbia River, is one of the world's largest.

In agriculture, the state leads in growing peppermint, holly, lily bulbs, caneberries,

liberts, Blue Lake beans and cover seed crops, and also raises strawberries, hops, wheat and other grains, sugar beets, potatoes, green peas, fiber flax, dairy products, livestock and poultry.

Oregon's coast is lush and green with heavy rainfall and is noted for its scenic beauty. Crater Lake National Park, Mount Hood and Bonneville Dam on the Columbia are other tourist attractions.

With the low-cost electric power provided by Bonneville Dam, McNary Dam and other dams in the Pacific Northwest, Oregon has developed steadily as a manufacturing state. Leading manufactures are lumber and lumber products, metalwork, machinery, aluminum, chemicals, paper and food processing.

PENNSYLVANIA

Capital: Harrisburg.

Governor: George M. Leader, Dem. (to Jan. 1959).

Entered Union & (rank): Dec. 12, 1787 (2).

Present constitution adopted: 1874.

Motto: Virtue, liberty and independence.

State flower: Mountain laurel (1933).

State tree: Hemlock (1931).

State bird: Ruffed grouse (1931).

State colors: Blue and gold.

State song: None.

Nickname: Keystone State.

Origin of name: In honor of Adm. Sir William Penn, father of William Penn. It means "Penn's Woodland."

1940 population & (rank): 9,900,180 (2).

1950 population & (rank): 10,498,012 (3).

1957 estimated population: 11,043,000.

Area & (rank): 45,333 sq. mi. (33).

Geographic center: In Center Co., 2 1/2 mi. SW of Bellefonte.

Number of counties: 67.

Largest cities (1950 Census): Philadelphia (2,071,605); Pittsburgh (676,806); Erie (130,803); Scranton (125,536); Reading (109,320).

State forests: 20 (1,857,447 ac.).

State parks: 54 (118,000 ac.).

Total general fund receipts (1955-57 biennium): \$1,425,659,850.

Total expenditures (1955-57 biennium): \$1,389,945,077.

From the steel mills of Pittsburgh through the mid-state coal mines and oil wells to the shipyards and factories of Philadelphia, Pennsylvania bristles with heavy industry. Approximately 30% of all American iron and steel is made in Pennsylvania. Other manufactures include locomotives, boilers, engines, blast furnaces, trucks, busses, wire, textiles, knit goods and nylon and rayon products. Virtually all of the U. S. anthracite (hard coal) deposits are located in Pennsylvania.

Agricultural products include apples, peaches, potatoes, corn, hay, barley, wheat, buckwheat and tobacco.

Pennsylvania is rich in historical lore. Philadelphia was the seat of the Federal government almost continuously from 1776 until 1800, and there the Declaration of Independence was signed and the Constitution drawn up. Valley Forge, of the Revolution,

and Gettysburg, the turning-point of the Civil War, are both in Pennsylvania. The Liberty Bell stands in Independence Square in Philadelphia.

Henry Hudson sailed into Delaware Bay in 1609. In 1681, William Penn, the Quaker, founded its first colony.

RHODE ISLAND

Capital: Providence.

Governor: Dennis J. Roberts, Dem. (to Jan. 1959).

Entered Union & (rank): May 29, 1790 (13).

Present constitution adopted: 1843.

Motto: Hope.

State flower: Violet (unofficial).

State tree: Maple (unofficial).

State bird: Rhode Island Red (official).

State colors: Blue, white and gold (in state flag).

Song: "Rhode Island" (1946).

Nickname: Little Rhody.

Origin of name: From the Greek island of Rhodes.

1940 population & (rank): 731,346 (36).

1950 population & (rank): 791,896 (36).

1957 estimated population: 862,000.

Area & (rank): 1,214 sq. mi. (49).

Geographic center: In Kent Co., 2.8 mi. S. by W. of Crompton.

Number of counties: 5.

Largest cities (1950 Census): Providence (248,674); Pawtucket (81,436); Cranston (55,060); Woonsocket (50,211); Warwick (43,028).

State forests: 9 (15,600 ac.).

State parks: 12 (7,400 ac.).

State general revenue (1957): \$79,243,092.

State general expenditure (1957): \$89,688,567.

Rhode Island, with the greatest density of population barring the District of Columbia, boasts the highest proportion of industrial workers of all the states. Leading industry is textiles, largely concentrated in Pawtucket, Providence and Woonsocket.

Providence is also one of the largest U. S. jewelry centers, and is important in the production of machinery and metal products.

With more than eight-tenths of the population living in urban areas, adjacent parts of the state are interested in dairying, poultry and truck farming. Nursery and greenhouse products and stock, potatoes, corn, apples, oats and hay lead the crop list. Of the state's land area, about one-seventh is farm cropland and open pasture; two-thirds is forested.

Newport is the site of the Naval War College and was long a show place for the luxurious summer homes built by some of New York's wealthiest people. The U. S. Naval Air Station is at Quonset in the town of North Kingstown.

Roger Williams founded Providence, and subsequently Rhode Island, in 1636 after he had been banished from Massachusetts for nonconformance to religious doctrine.

SOUTH CAROLINA

Capital: Columbia.

Governor: George B. Timmerman, Jr., Dem. (to Jan. 1959).

Entered Union & (rank): May 23, 1788 (8).

Seceded from Union: Dec. 20, 1860.

Re-entered Union: July 18, 1868.

Present constitution adopted: 1895.

Mottoes: *Animus opibusque parati* (Prepared in mind and resources) and *Dum spiro spero* (While I breathe, I hope).

State flower: Carolina yellow jessamine (1924).

State tree: Palmetto tree (1939).

State bird: Carolina wren (1948).

State song: "Carolina" (1911).

Nickname: Palmetto State.

Origin of name: In honor of Charles II of England.

1940 population & (rank): 1,899,804 (26).

1950 population & (rank): 2,117,027 (27).

1957 estimated population: 2,370,000.

Area & (rank): 31,055 sq. mi. (40).

Geographic center: In Richland Co., 13 mi. SE of Columbia.

Number of counties: 46.

Largest cities (1950 Census): Columbia (86,914); Charleston (70,174); Greenville (58,161); Spartanburg (36,795); Rock Hill (24,502).

State forests: 4 (123,000 ac.).

State parks: 22 (46,000 ac.).

State total revenue (1956-57): \$185,330,765.

State general expenditure (1956-57): \$182,457,920.

Once primarily agricultural, South Carolina has built so many big textile and other mills that today the state's factories are seven times the output of its farms in cash value. Agriculture has not, however, been completely replaced and today its chief crops are cotton, tobacco, peaches, corn, hay, oats, sweet potatoes and peanuts which are enhanced by the recent development of modern soil-conservation methods. Charleston makes asbestos, wood, pulp and steel products.

Civil War hostilities were started in this state at Charleston, when, on April 12, 1861, South Carolina men bombarded and captured Fort Sumter. In Charleston harbor the first submarine was used in warfare.

Vasquez de Ayllon, who came from Santo Domingo with about 500 settlers in 1526, made the first attempt to colonize this state but the expedition was later wiped out by Indians. In succeeding years, Spanish attempts were successful.

SOUTH DAKOTA

Capital: Pierre.

Governor: Joseph J. Foss, Rep. (to Jan. 1959).

Organized as territory: Mar. 2, 1861.

Entered Union & (rank): Nov. 2, 1889 (40).

Present constitution adopted: 1889.

Motto: Under God the people rule.

State flower: American pasqueflower (1903).

State tree: Black Hills spruce (1947).

State bird: Ring-necked pheasant (1943).

State animal: Coyote (1949).

State colors: Blue and gold (in state flag).

State song: "Hail! South Dakota" (1943).

Nicknames: Sunshine State; Coyote State.

Origin of name: Same as for North Dakota.

1940 population & (rank): 642,961 (38).

1950 population & (rank): 652,740 (40).

1957 estimated population: 702,000.

Area & (rank): 77,047 sq. mi. (16).

Geographic center: In Hughes Co., 8 mi. NE of Pierre.

Number of counties: 68 (64 county governments).

Largest cities (1950 Census): Sioux Falls (52,696); Rapid City (25,310); Aberdeen (21,051); Huron (12,788); Watertown (12,699).

State forests: 4 (86,000 ac.).

State parks: 10 (80,000 ac.).*

State general revenue (1956-57): \$94,715,994.

State general expenditure (1956-57): \$100,822,386.†

* The acreage shown includes 46 recreation areas and 31 roadside parks in addition to the 10 state parks.

† Includes final liquidation of veterans' bonds for Korean War, which results in higher expenditures than revenue.

Seventy-five per cent of the population of South Dakota is actively interested in agriculture. Its leading crops are rye, barley, oats, corn, wheat. Cattle raising and dairying are its stronger industries. The richest U. S. gold mine, the Homestake, is at Lead.

The Black Hills, a great tourist attraction, are the highest mountains east of the Rockies. Mt. Rushmore, in this group, is celebrated for the likenesses of Washington, Jefferson, Lincoln and Theodore Roosevelt, which were carved in stone by the late Gutzon Borglum. The Badlands offer very scenic masses of bare rock and clay unrelieved by any vegetation. It was in this state that the Sioux Indians, angered at the influx of the white men who were searching for gold, started the hostilities which ended in Custer's Massacre, on June 25, 1876, in Montana.

TENNESSEE

Capital: Nashville.

Governor: Frank G. Clement, Dem. (to Jan. 1959).

Entered Union & (rank): June 1, 1796 (16).

Seceded from Union: June 24, 1861.

Re-entered Union: July 24, 1866.

Present constitution adopted: 1870, amended for first time 1953.

Motto: Agriculture, commerce.

State flower: Iris (1933).

State tree: Tulip poplar (1947).

State bird: Mockingbird (1933).

Songs: "My Homeland, Tennessee" (1925) and "When It's Iris Time in Tennessee" (1935).

Nickname: Volunteer State.

Origin of name: From the name of the ancient capital of the Cherokee tribe.

1940 population & (rank): 2,915,841 (15).

1950 population & (rank): 3,291,718 (16).

1957 estimated population: 3,463,000.

Area & (rank): 42,246 sq. mi. (34).

Geographic center: In Rutherford Co., 5 mi. NE of Murfreesboro.

Number of counties: 95.

Largest cities (1950 Census): Memphis (396,000); Nashville (174,307); Chattanooga (131,041); Knoxville (124,769); Jackson (30,207).

State forests: 14 (154,752 ac.).

State parks: 19 (101,325 ac.).

State general revenue (1956-57): \$391,828,000.

State general expenditure (1956-57): \$362,969,000.

Tennessee won world prominence in 1945, for the atom bomb was made possible by the Clinton Engineer Works at Oak Ridge.

The state is now predominately industrial, with production including chemicals, food, textiles, virgin aluminum, shoes, lumber products, and metal work. Mineral products include phosphates, zinc, copper, lead, sinter iron, pyrites, high-grade pottery clay, coal and marble. Tennessee's agricultural production includes livestock, cotton, corn, tobacco, hay, dairy products, poultry and eggs.

Tennessee is the home of TVA which operates 29 dams and distributes power from 3 dams on the Cumberland River maintained by the Army Corps of Engineers. Benefits of flood control, navigation and electrical power reach into 6 other states (Kentucky, Alabama, North Carolina, Georgia, Virginia, and Mississippi). The Tennessee River, already the most completely used major river in the world, is insufficient to supply energy needs, and the power system is being doubled by use of steam generating plants.

TEXAS

Capital: Austin.
Governor: Price Daniel, Dem. (to Jan. 1959).
Entered Union & (rank): Dec. 29, 1845 (28).
Succeeded from Union: Mar. 2, 1861.
Re-entered Union: Mar. 30, 1870.
Present constitution adopted: 1876.
Motto: Friendship.

State flower: Bluebonnet (1901).
State tree: Pecan (1919).
State bird: Mockingbird (1927).
State song: "Texas, Our Texas" (1930).
Nickname: Lone Star State.
Origin of name: From an Indian word meaning "friends."

1940 population & (rank): 6,414,824 (6).
1950 population & (rank): 7,711,194 (6).
1957 estimated population: 9,138,000.
Area & (rank): 267,339 sq. mi. (2).
Geographic center: In McCulloch Co., 20 mi. NE of Brady.

Number of counties: 254.
Largest cities (1950 Census): Houston (596,163); Dallas (434,462); San Antonio (408,442); Fort Worth (278,778); Austin (132,459).

State forests: 4 (6,306 ac.).
State parks: 49.
State revenue receipts (1956-57): \$964,908,706.
State governmental cost (1956-57): \$872,680,662.

Big, sprawling, vigorous Texas, comprising one-twelfth of the entire area of the United States, is the richest political subdivision in the world with the possible exception of the Russian Ukraine, and is the only state that may, by Congressional statute, divide into five parts if it so desires. There is very little possibility of this ever being done because Texas and Texans live by its bigness. Texas is a natural leader in oil, natural gas, cotton, cattle, helium, sulfur, sheep, wool, onions and turkeys.

The distance from El Paso to Beaumont is a greater distance than from New York to Chicago. Texas supports possibly the most ardent local enthusiasts in the nation, who are always quick to boast of her.

Over the Neches River, at Port Arthur, is the most elevated highway bridge over tidal waters in the world.

Cabeza de Vaca explored the state in 1528. Since 1685, it has been under the jurisdiction of 6 separate governments: those of France, Spain, Mexico, the Republic of Texas, the Confederacy, and the United States.

UTAH

Capital: Salt Lake City.
Governor: George D. Clyde, Rep. (to Jan. 1961).

Organized as territory: Sept. 9, 1850.
Entered Union & (rank): Jan. 4, 1896 (45).
Present constitution adopted: 1896.
Motto: Industry.

State flower: Sego lily (1911).
State tree: Blue spruce (1933).
State bird: Seagull (1955).
State emblem: Beehive.
State song: "Utah, We Love Thee."
Nickname: Beehive State.

Origin of name: From the Ute tribe, meaning "people of the mountains."

1940 population & (rank): 550,310 (41).
1950 population & (rank): 688,862 (38).

1957 estimated population: 851,000.
Area & (rank): 84,916 sq. mi. (11).
Geographic center: In Sanpete Co., 3 mi. N of Mantle.

Number of counties: 29.
Largest cities (1950 Census): Salt Lake City (182,121); Ogden (57,112); Provo (28,937); Logan (16,832); Murray (9,006).

State forests: None.
State parks: 3 (276 ac.).
State general revenue (1956-57): \$136,623,122.*
State general expenditure (1956-57): \$129,054,093.*

* State began period with \$38,833,037 balance or surplus; finished with \$46,402,066.

Utah, rich in natural resources, has long been recognized for its copper, gold, silver, lead and zinc. Also, it produces all the elements necessary for the manufacture of steel: iron, lime, dolomite, fluorspar, manganese and coal for coking. Uranium mining has recently become a major industry. The state is also developing an oil industry.

Utah's crops requiring extensive irrigation include sugar beets, potatoes, hay, onions and wheat. Various garden crops, such as beans, peas and tomatoes, and fruits, such as pears, peaches, apples and apricots, make up an ever-growing industry. Eggs and commercial poultry are also among the products of Utah.

Brigham Young led the Mormons into the area in 1847. In 1896, Utah was admitted into the Union.

Great Salt Lake, lying in the north central area, has long been a world wonder. It has no known outlet, and its salt content is about six times that of the ocean. Because of its natural beauty and pioneer culture, Utah is an ideal place for tourists to visit.

VERMONT

Capital: Montpelier.
Governor: Joseph B. Johnson, Rep. (to Jan. 1959).

Entered Union & (rank): Mar. 4, 1791 (14).
Present constitution adopted: 1793.

Motto: Vermont—freedom and unity.
State flower: Red clover (1894).
State tree: Sugar maple (1949).
State bird: Hermit thrush (1941).
State song: "Hall to Vermont" (1937).
Nickname: Green Mountain State.
Origin of name: From the French, meaning "green mountain."
1940 population & (rank): 359,231 (46).
1950 population & (rank): 377,747 (45).
1957 estimated population: 376,000.
Area & (rank): 9,609 sq. mi. (43).
Geographic center: In Washington Co., 4.5 mi. SSE of Roxbury Village.
Number of counties: 14.
Largest cities (1950 Census): Burlington (33,155); Rutland (17,659); Barre (10,922); Montpelier (8,599); St. Albans (8,552).
State forests: 26 (80,697 ac.).
State parks: 25 (3,641 ac.).
State revenue (1957): \$57,565,518.
State expenditure (1957): \$64,316,680.

Vermont, the only New England state without a seacoast (and the last to be settled because of this), leads the nation in marble, granite, asbestos and maple syrup production. In ratio to population it keeps more dairy cows than any other state. Vermont's soil is devoted to dairying, truck farming and fruit growing, its rugged area precluding extensive farming. This same quality, however, along with a bracing dry climate, makes the state popular as a summer resort and as a center of winter sports. Two-thirds of the total land area of the state is classified as forest land.

From 1777 to 1791, Vermont was an independent state of indefinite status with some national perquisites and then was the first state after the original thirteen to join the Union. It was also the first state to forbid slavery and the first to adopt universal manhood suffrage (1777). Vermont has been Republican since 1854; only Georgia on the Democratic side ties that record for consistency.

VIRGINIA

Capital: Richmond.
Governor: James Lindsey Almond, Dem. (to Jan. 1962).
Entered Union & (rank): June 25, 1788 (10).
Seceded from Union: Apr. 17, 1861.
Re-entered Union: Jan. 27, 1870.
Present constitution adopted: 1902.
Motto: *Sic semper tyrannis* (Thus always to tyrants).
State flower: American dogwood (1918).
State bird: Cardinal.
State song: "Carry Me Back to Old Virginny" (1940).
Nicknames: The Old Dominion; Cavalier State.
Origin of name: In honor of Elizabeth, "Virgin Queen" of England.
1940 population & (rank): 2,677,773 (19).
1950 population & (rank): 3,318,680 (15).
1957 estimated population: 3,797,000.
Area & (rank): 40,815 sq. mi. (36).
Geographic center: In Appomattox Co., 11 mi. S of E of Amherst.

Number of counties: 98, plus 32 independent cities.
Largest cities (1950 Census): Richmond (230,310); Norfolk (213,513); Roanoke (91,921); Portsmouth (80,039); Alexandria (61,787).
State forests: 6 (45,072 ac.).
State parks: 8 (24,073 ac.).
State revenue (1957): \$559,609,640.
State expenditure (1957): \$495,187,076.

The history of America is closely tied to that of Virginia, particularly in the colonial period. Jamestown, founded in 1607, was the first permanent English settlement in North America, and slavery was introduced there in 1619. The surrenders ending both the American Revolution and the Civil War occurred in Virginia. The state is called the "Mother of Presidents" because 8 chief executives of the U. S. were born there.

Points of historic interest include Mount Vernon and other places associated with Washington; Monticello, home of Jefferson; Stratford, home of the Lees; Richmond, capital of the Confederacy and of Virginia; and Williamsburg, the restored Colonial capital.

Among Virginia's natural wonders are the famous Natural Bridge and the limestone caverns of the Shenandoah Valley. The most important natural resources are beds of bituminous coal, forest lands, oyster beds and commercial fisheries.

Manufacturing includes chemicals, textiles, lumber and wood products, foods, transportation equipment (including shipbuilding), apparel and furniture. Agricultural products include livestock, poultry, dairy goods, tobacco, apples, grains and hay crops.

WASHINGTON

Capital: Olympia.
Governor: Albert D. Rosellini, Dem. (to Jan. 1961).
Organized as territory: Mar. 2, 1853.
Entered Union & (rank): Nov. 11, 1889 (42).
Present constitution adopted: 1889.
Motto: *Al-Ki* (Indian word meaning Bye and Bye).
State flower: Rhododendron (1949).
State tree: Hemlock (1947).
State bird: Goldfinch (1951).
State colors: Green and gold (1925).
State song: "Washington's Song" (1909).
Nicknames: Evergreen State; Chinook State.
Origin of name: In honor of Geo. Washington.
1940 population & (rank): 1,736,191 (30).
1950 population & (rank): 2,378,963 (23).
1957 estimated population: 2,722,000.
Area & (rank): 68,192 sq. mi. (20).
Geographic center: In Chelan Co., 10 mi. S of W of Wenatchee.
Number of counties: 39.
Largest cities (1950 Census): Seattle (467,591); Spokane (161,721); Tacoma (143,673); Yakima (38,486); Bellingham (34,112).
State forests: 2 (290,000 ac.).
State parks: 75 (65,667 ac.).
State revenue, all funds (1955-56): \$471,933,775.
State expenditures, all funds (1955-56): \$438,711,366.

Washington is one of the leaders in lumber production. Its rugged surface is rich

in stands of Douglas fir, yellow and white pine, spruce, larch and cedar. The state's other first is apples. Food and lumber products and a wide variety of goods flow from Washington factories.

The Columbia River contains one third of the potential water power of America. Largest dam is Grand Coulee, greatest power producer in the world. Other mighty dams on the Columbia include Chief Joseph, Rock Island, Bonneville, McNary and The Dalles, which are shared with Oregon. There are 96 dams in Washington, built for various purposes including power, irrigation, flood control, water storage, etc.

The Hanford Engineer Works, north of Pasco, has been set up as the world's first full-scale plant for atom bombs.

WEST VIRGINIA

Capital: Charleston.

Governor: Cecil H. Underwood, Rep. (to Jan. 1961).

Entered Union & (rank): June 20, 1863 (35).

Present constitution adopted: 1872.

Motto: *Montani semper liberi* (Mountaineers always free).

State flower: Rhododendron (1903).

State tree: Sugar maple (1949).

State bird: Cardinal (1949).

State animal: Black bear.

State colors: Blue and gold (unofficial).

State songs: "West Virginia, My Home Sweet Home" (approved 1947 as one of songs of state); "West Virginia Hills" (by custom).

Nickname: Mountain State.

Origin of name: Same as for Virginia.

1940 population & (rank): 1,901,974 (25).

1950 population & (rank): 2,005,552 (29).

1957 estimated population: 1,976,000.

Area & (rank): 24,181 sq. mi. (41).

Geographic center: In Braxton Co., 4 mi. E of Sutton.

Number of counties: 55.

Largest cities (1950 Census): Huntington (86,353); Charleston (73,501); Wheeling (58,891); Clarksburg (32,014); Parkersburg (29,684).

State forests: 10 (96,418 ac.).

State parks: 21 (38,752 ac.).

State general revenue (1956-57): \$101,656,338.

State general expenditure (1956-57): \$98,678,887.

Mountainous West Virginia is the coal mining leader of the nation. The state also ranks high in steel, glass, aluminum and chemical manufacture, natural gas, oil, quarry products and hardwood lumber. Cattle is the main agricultural product. Leading crops include wheat, corn, oats, hay, tobacco and fruit.

West Virginia was created when its residents refused to secede from the Union and severed the state from Virginia during the Civil War era.

Like many mountain states, West Virginia has an equable climate without extremes. White Sulphur Springs, in Greenbrier County, is a famous health resort. Mountain streams give the state one of the highest U. S. water-power potentials.

WISCONSIN

Capital: Madison.

Governor: Vernon W. Thomson, Rep. (to Jan. 1959).

Organized as territory: Apr. 20, 1836.

Entered Union & (rank): May 29, 1848 (30).

Present constitution adopted: 1848.

Motto: Forward.

State flower: Violet.

State tree: Sugar maple.

State bird: Robin.

State animal: Badger; "wild life" animal: white-tailed deer.

State fish: Musky (Muskellunge).

State song: "On Wisconsin" (unofficial).

Nickname: Badger State.

Origin of name: French corruption of an Indian word meaning "gathering of waters."

1940 population & (rank): 3,137,587 (13).

1950 population & (rank): 3,434,575 (14).

1957 estimated population: 3,862,000.

Area & (rank): 56,154 sq. mi. (26).

Geographic center: In Wood Co., 9 mi. SE of Marshfield.

Number of counties: 71.

Largest cities (1950 Census): Milwaukee (637,392); Madison (96,056); Racine (71,193); Kenosha (54,368); Green Bay (52,735).

State forests: 7 (335,105 ac.).

State parks: 31 (18,325 ac.).

State total net revenue, all funds (1956-57): \$502,007,899.

State total net expenditure, all funds (1956-57): \$466,006,400.

Wisconsin leads the U. S. in milk and cheese production. In 1957, the state produced 13% of the nation's total output of milk. Other important farm products are: potatoes, cabbage, maple sugar, cranberries and cherries. The state ranks first in producing peas, corn and beets for canning.

About 40 years ago Wisconsin's forests became depleted, but in recent years phenomenal strides in reforestation have been made. The chief industrial products of the state are automobiles, machinery, furniture, paper, beer and processed foods.

Wisconsin pioneered in social legislation, providing pensions for the blind (1907), aid to dependent children (1913) and old-age assistance (1925). In 1932, it was the first state to enact an unemployment compensation law. In labor legislation, the state has also pioneered in important laws, among them the first workmen's compensation law actually to take effect. Wisconsin had the first state-wide primary-election law and the first successful income-tax law.

WYOMING

Capital: Cheyenne.

Governor: Millard L. Simpson, Rep. (to Jan. 1959).

Organized as territory: July 25, 1868.

Entered Union & (rank): July 10, 1890 (44).

Present constitution adopted: 1890.

Motto: Equal rights (1955).

State flower: Indian paintbrush (1917).

State tree: Cottonwood (1947).

State bird: Meadow lark (1927).
 State insignia: Bucking horse (unofficial).
 State song: "Wyoming" (1955).
 Special legal holiday: Arbor Day (by governor's designation).
 Nickname: Equality State.
 Origin of name: From the Indian, meaning "mountains and valleys alternating"; named after the Wyoming Valley in Pa.
 1940 population & (rank): 250,742 (47).
 1950 population & (rank): 290,529 (47).
 1957 estimated population: 316,000.
 Area & (rank): 97,914 sq. mi. (9).
 Geographic center: In Fremont Co., 58 mi. N of E of Lander.
 Number of counties: 23, plus Yellowstone National Park.
 Largest cities (1950 Census): Cheyenne (31,935); Casper (23,673); Laramie (15,581); Sheridan (11,500); Rock Springs (10,857).
 State forests: None.

State parks: 2 (1,060 ac.).
 Estimated income available (General Fund, 1957-59): \$33,391,551.
 Estimated expenditure (General Fund, 1957-59): \$31,385,317.

Wealthy in wool, cattle, oil and coal, Wyoming was first in U. S. history to insure woman's place in politics. In 1869, it gave women the vote and Mrs. Nellie Tayloe Ross, who held office in 1925-27, was the first U. S. woman governor.

Second in mean elevation to Colorado, Wyoming has many lures for the tourist trade, notably Yellowstone National Park. Cheyenne is famous for its annual "Frontier Days" celebration, which brings in visitors from everywhere. One of the world's largest subbituminous coal fields lies near Gillette. Big game hunting is good in many parts of the state.

SELF-GOVERNING U. S. TERRITORY

HAWAII

Capital: Honolulu (on Oahu).
 Governor: William F. Quinn.
 Organized as territory: 1900.
 Motto: *Ua Mau Ke Ea O Ka Aina I Ka Pono* (The life of the land is preserved by righteousness).
 Territorial flower: Hibiscus.
 Territorial song: "Hawaii Ponoi" (unofficial).
 Territorial bird: Nene (Hawaiian goose).
 Nickname: Paradise of the Pacific.
 1940 population: 423,300.
 1950 population: 499,794.
 1940-50 population change: +18.1%.
 1958 estimated civilian population: 569,504.
 Area: 6,454 sq. mi. (incl. outlying islands).
 Counties: 4.
 Largest cities (1950 Census): Honolulu (248,034); Hilo (27,198); Wahiawa (8,369); Kailua-Lanikai (7,740); Wailuku (7,424).

Hawaii, 2,100 miles west-southwest of San Francisco, is a 390-mile chain of islets and 8 main islands—Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai, and Niihau. Kure (Ocean) Island, an uninhabited islet in the Leeward Islands, and Palmyra, in the

Line Islands, are administratively part of Hawaii.

Hawaii's temperature is mild and the soil is fertile for tropical fruits and vegetables. Cane sugar and pineapple are its chief products, approximately 75% of the world's canned pineapple being produced in the islands. Hawaii also grows coffee, rice, bananas, nuts and potatoes. Some livestock and poultry are raised. The tourist business is Hawaii's fourth largest source of income.

Hawaii's highest peak, Mauna Kea, rises to 13,784 feet and is, in a sense, the world's highest mountain since it springs from an ocean floor 18,000 feet below sea level.

Hawaii's Governor is appointed by the President to a 4-year term, and there is a locally elected 2-house legislature. The territory's delegate to the U. S. House of Representatives has floor privileges but no vote.

Hawaii was discovered in 1778 by Captain James Cook, who named it the Sandwich Islands. It was ruled by native monarchs until 1893, thereafter as a republic until 1898, when it ceded itself to the U. S.

COMMONWEALTH OF PUERTO RICO

Capital: San Juan.
 Governor: Luis Muñoz Marín, Pop. Dem. (to Jan. 1961).
 Song: "La Borinqueña."
 1940 population: 1,869,255.
 1950 population: 2,210,703.
 1940-50 population change: +18.3%.
 1957 estimated population: 2,281,000.
 Area: 3,423 sq. mi.
 Largest cities (1950 Census): San Juan (357,205*); Ponce (99,492); Mayagüez (58,944); Caguas (33,759); Arecibo (28,659).

* Includes Río Piedras (132,438), which was annexed in 1951.

Puerto Rico is an island about 100 mi. long and 35 mi. wide at the northeastern

end of the Caribbean Sea. It is a self-governing Commonwealth freely and voluntarily associated with the U. S. Under its Constitution, a Governor and a Legislative Assembly are elected by direct vote for a 4-year period. The judiciary is vested in a Supreme Court and lower courts established by law. The people elect a Resident Commissioner to the U. S. House of Representatives, where he has a voice but no vote. The island was formerly an unincorporated territory of the U. S. after being ceded by Spain as a result of the Spanish-American War.

The Commonwealth, established in 1952, is one of the most densely populated areas of

the world, with about 674 inhabitants per square mile. However, it has one of the highest standards of living in Latin America. Featuring Puerto Rican economic development is Operation Bootstrap. This program has established more than 500 new factories

and has greatly increased agricultural production, transportation and communications facilities, electric power, housing, and other industries.

Columbus discovered the island on his second voyage to America in 1493.

NON SELF-GOVERNING U. S. TERRITORIES

AMERICAN SAMOA

Capital: Pago Pago (on Tutuila Island).

Governor: Peter Tali Coleman.

1940 population: 12,908.

1950 population: 18,937.

1956 population: 20,154.

Area: 75.3 sq. mi.

American Samoa, a group of 5 volcanic islands and 2 coral atolls located some 2,400 miles south of Hawaii in the South Pacific Ocean, is administered by the Interior Dept.

By the Treaty of Berlin signed Dec. 2, 1899, and ratified Feb. 16, 1900, the U. S. was internationally acknowledged to have rights extending over all the islands of the Samoa group east of longitude 171° west of Greenwich. On Apr. 17, 1900, the chiefs of Tutuila and Aunu'u ceded those islands to the U. S. In 1904, the King and chiefs of Manu'a ceded the islands of Ofu, Olosega and Tau (comprising the Manu'a group) to the U. S. Swains Island, some 200 miles north of Samoa, was included as part of the territory by Act of Congress Mar. 4, 1925; and on Feb. 20, 1929, Congress formally accepted sovereignty over the entire group and placed the responsibility for administration in the hands of the President. From 1900-51, by Presidential direction, the Department of the Navy governed the territory. On July 1, 1951, administration was transferred to the Department of the Interior.

The principal products are copra, mats, handicrafts and canned fish.

BAKER, HOWLAND AND JARVIS

These Pacific islands were not to play a role in the extraterritorial plans of the U. S. until May 13, 1936, when the U. S. perfected its claim. President F. D. Roosevelt, at that time, placed them under the control of and jurisdiction by the Secretary of the Interior for administration purposes.

Baker Island is a saucer-shaped atoll with an area of approximately one square mile and an elevation of 20 feet. It is about 1,650 miles from Hawaii.

Howland Island, 36 miles to the northeast, is approximately one and a half miles long and half a mile wide and rises to an elevation of 18 feet.

Jarvis Island is several hundred miles to the east and is approximately two miles long by one and an eighth miles wide.

CANAL ZONE

Headquarters: Balboa Heights, C. Z.; 21 West St., New York City; 425 Thirteenth St., N. W., Washington, D. C.

Governor-President: Major Gen. William F. Potter.

1940 population: 51,827.

1954 population: 38,953.

Area: 648.01 sq. mi.

The Canal Zone is a 50-mile strip between the Atlantic and Pacific Oceans which was granted to the U. S. in perpetuity by the Republic of Panamá by treaty in 1903 (ratified Feb. 26, 1904). It extends roughly 5 miles on either side of the center line of the Panama Canal.

The 1903 treaty provided for the payment of \$10,000,000 by the U. S. to Panamá upon ratification of the treaty and \$250,000 in gold annually, beginning 9 years after ratification. The annual payments were increased to \$430,000 after the U. S. went off the gold standard. The annuity was increased to \$1,930,000 by the 1955 treaty.

The history of the Canal goes back to 1534, when King Charles V of Spain ordered a survey made. Construction of the waterway was formally inaugurated in Jan. 1880 by the French Canal Co. under a concession granted by New Granada (Colombia) 2 years earlier. The canal rights and properties of the second French Canal Co. were bought by the U. S. for \$40,000,000, the transfer being made May 4, 1904, in Panama City. The construction was completed 10 years later.

The Canal is 40.27 miles from shore line to shore line and 50.72 miles from deep water in the Caribbean to deep water in the Pacific. The Panama Railroad, completed in 1855, is owned by the Panama Canal Co. It roughly parallels the Canal channel, running 47.64 miles from Colón to Panama City and is the oldest transcontinental railroad in the Americas.

The Panama Canal Locks, which provide a water bridge between the two oceans, are Gatún Locks on the Atlantic side and Pedro Miguel and Miraflores Locks on the Pacific side. They lift or lower ships 85 feet between sea level and Gatún Lake level in 3 steps on each side of the Isthmus. Each of the twin chambers in every flight of locks has a usable length of 1,000 feet, and width of 110 feet, and is about 70 feet deep.

The Canal Zone is, in effect, a U. S. government reservation, and in general no private enterprise is permitted except that relating directly to the operation of the waterway. The Governor, who is appointed by the U. S. President, administers the Canal Zone Government, which is charged with the civil government, including health, sanitation and protection of the Zone. The Governor is also ex officio President of the Panama Canal Company, which is a corporate agency of the U. S. charged with the operation of the Canal and related business activities.

CANTON AND ENDERBURY

Canton and Enderbury Islands, the largest of the Phoenix group, are jointly owned and supervised by the U. S. and Great Britain after an agreement signed on Apr. 6, 1939. Canton is triangular in shape and the largest of the eight islands of this group. It lies approximately 1,600 miles southwest of Hawaii in the Pacific and was discovered at the turn of the eighteenth century by U. S. whalers. It was surveyed by Commander R. W. Meade who named it after a whaler ship. It had, in 1956, a population of 341, including Europeans. Enderbury is rectangular in shape and is 2.7 miles long by one mile wide. It is unpopulated and lies about 32 miles southeast of Canton.

GUAM

Capital: Agaña.
Governor: Richard Barrett Lowe.
1940 population: 22,290.
1950 population: 59,498.
1957 estimated population: 65,000.
Area: 209 sq. mi.

Guam, the largest of the Mariana Islands, is independent of the trusteeship assigned to the U. S. in 1947. It was acquired by the U. S. from Spain in 1898 (occupied 1899) and was placed under the Navy Department.

In World War II, Guam was seized by the Japanese on Dec. 11, 1941; but on July 27, 1944, it was once more in U. S. hands.

On Aug. 1, 1950, President Truman signed a bill which granted U. S. citizenship to the people of Guam and established self-government. However, the people do not have an elected representative in Washington, D.C., and they do not vote in national elections. The civilian Governor operates under the Department of the Interior.

Guam farmers raise all crops indigenous to a subtropical climate.

Added stimulus to Guam's economy was given by the development in 1950 of a commercial port at Apra Harbor.

JOHNSTON ISLAND

This island was originally discovered by Captain Charles James Johnston of *H.M.S. Cornwallis* on Dec. 14, 1807. On July 27, 1858, it was claimed by Hawaii and became a possession of the U. S. The island is about 600 miles southwest of Hawaii and about 1½ miles long by half a mile wide.

KINGMAN REEF

This reef was discovered by Captain W. E. Kingman in Nov. 1853 and is the smallest land of U. S. sovereignty. It is 150 feet long by 120 feet wide at high tide. At low tide, two other islets of this atoll appear. It is approximately 1,000 miles south of Hawaii.

KURE (OCEAN) ISLAND. See HAWAII

MIDWAY

Midway, lying about 1,200 miles west-northwest of Hawaii, was discovered by Captain N. C. Brooks of the Hawaiian bark

Gambia on July 5, 1859, in the name of the U. S. It was formally declared a U. S. possession in 1867, and in 1903 Theodore Roosevelt made it a naval reservation.

Sand and Eastern Islands, with 850 acres and 328 acres respectively, are its largest individual islands. In 1935 Midway became a stopover for commercial transpacific flights. Commercial activities ceased in 1950.

The total group comprises an area of 28 square miles and has no native population. The Navy Dept. maintains an installation and, with the Civil Aeronautics Administration, has jurisdiction over the island.

PALMYRA. See HAWAII**VIRGIN ISLANDS OF THE U. S.**

Capital: Charlotte Amalie (on St. Thomas).
Governor: Walter A. Gordon.
1940 population: 24,889 (St. Croix, 12,902; St. Thomas, 11,265; St. John, 722).
1950 population: 26,665.
1940-50 population change: +7.1%.
1956 estimated population: 30,261.
Area: 133 sq. mi. (St. Croix, 82; St. Thomas, 32; St. John, 19).

The Virgin Islands, consisting of 9 main islands and some 75 islets, were discovered by Columbus in 1493. Since 1666, England has held 6 of the main islands; the other 3 (St. Croix, St. Thomas and St. John), as well as about 50 of the islets, were eventually acquired by Denmark, which named them the Danish West Indies. In 1917, these islands were purchased by the U. S. from Denmark for \$25 million.

Congress granted U. S. citizenship to Virgin Islanders in 1927; and, in 1931, administration was transferred from the Navy to the Department of the Interior. Universal suffrage was given in 1936 to all persons who could read and write the English language. The Governor is appointed by the President of the U. S.

About 85% of the population is Negro, and there is limited farming, fishing and cattle raising. Vegetables, citrus fruits and coconuts are raised, and the chief items of export are sugar, rum and bay rum. Tourism is the principal industry.

WAKE ISLAND

Wake Island, about halfway between Midway and Guam, is actually the three islets of Wilkes, Peale and Wake. They were discovered by the British in 1796 and annexed by the U. S. in 1898. The entire area comprises four square miles. In 1938, Pan American Airways established a seaplane base and it has been used as a commercial base since then. On Dec. 8, 1941, it was attacked by the Japanese, who finally took possession on Dec. 23. It was surrendered by the Japanese on Sept. 4, 1945. On Oct. 15, 1950, it was the scene of a conference between President Truman and General MacArthur.

The Civil Aeronautics Administration maintains a station on the island and has jurisdiction, with the Navy, over the island. There is no native population.

U. S. Trusteeships

In 1885, Germany assumed a protectorate over the Marshall Islands; and, in 1899, she purchased the Northern Mariana and Caroline Islands from Spain. These islands were occupied by the Japanese in 1914 and were mandated to Japan by the League of Nations in 1919. On Apr. 2, 1947, the U. N. Security Council approved a trusteeship agreement proposed by the U. S. under which the Northern Mariana, Caroline and Marshall Islands became a Strategic Trust Territory under the administration of the U. S. The measure was approved by the President, with the agreement of Congress, on July 18, 1947. Administration was transferred from the Navy to the Department of the Interior on July 1, 1951. However, administration of Saipan and Tinian was transferred back to the Navy on Jan. 1, 1953. On July 17 of the same year, administration of the remaining islands of the Northern Marianas, with the exception of Rota, was also transferred back to the Navy.

The entire group comprises more than 2,000 islands, but the total land area is only 687 sq. mi., many of the islands being only tiny coral reefs. The Micronesians are the main cultural group, the inhabitants of the Northern Marianas being most advanced.

MARIANA ISLANDS

The Mariana Islands, east of the Philippines and south of Japan, include the islands of Guam, Rota, Saipan, Tinian, Pagan, Guguan, Agrihan and Aguijan. Guam, the largest, is independent of the trusteeship, having been acquired by the U. S. from Spain in 1898. (For information on Guam, see preceding page.)

Chief crops are copra and fresh fruits and vegetables.

CAROLINE ISLANDS

The Caroline Islands, east of the Philippines and south of the Marianas, include the Yap, Truk and Palau groups and the islands of Ponape and Kusale, as well as many coral atolls.

The islands are composed chiefly of vol-

canic rock, and their peaks rise 2,000 to 3,000 feet above sea level. Chief exports of the islands are copra, trochus and handicrafts.

MARSHALL ISLANDS

The Marshall Islands, east of the Carolines, are divided into two chains: the western or Ralik group, including the atolls Jaluit, Kwajalein, Wotho, Bikini and Eniwetok; and the eastern or Ratak group, including the atolls Mill, Majuro, Maloelap, Wotje and Likiep.

The islands are of the coral-reef type and rise only a few feet above sea level. The chief crop is coconuts; exports include copra, tortoise shell, mother-of-pearl, etc.

Bikini and Eniwetok have been the scene of several atom-bomb tests.

Islands Under Provisional U. S. Administration

In accordance with the Japanese peace treaty signed Sept. 8, 1951, the U. S. may propose that the U. N. assign to it, as a trusteeship, the following former Japanese territory: the Ryukyu Islands south of 29° n. lat. (largest: Okinawa); the Bonin Islands (largest: Chichi Jima); the Volcano Islands

(including Iwo Jima); Rosario Island; Parece Vela; and Marcus Island. It was also agreed in the treaty that, until such trusteeship is actually granted, the U. S. will administer the islands. As of Sept. 1958, no action had been taken by the U. S. toward bringing about this trusteeship.

THE 50 LARGEST CITIES OF THE CONTINENTAL U. S.

Since we planned the INFORMATION PLEASE ALMANAC as a book of national scope and interest, we avoided emphasis on and identification with a single city or state, as has been characteristic of all almanacs heretofore. To obtain accurate and authoritative information we have gone to the city officials. We appreciate their co-operation. The tabular material listed here is the latest provided by the sources.

AKRON, OHIO

Incorporated as city: 1865.
Mayor-Manager: Leo Berg (to Dec. 1959).
1940 population & (rank): 244,791 (38).
1950 population & (rank): 274,605 (39).
1940-50 population change: +12.2%.
1950 land area: 53.7 sq. mi.
Altitude: 1,081 ft.
Location: In NE part of state, on Little Cuyahoga River.
County: Seat of Summit Co.
Churches: 316 of all denominations in county.
City-owned parks: 73 (4,400 ac.).
Telephones (1957): 132,317.
Television sets (1957): 142,000.*

Radio stations (1958): AM, 4; FM, 1.
Assessed valuation (1957): \$716,000,000.
City tax rate (1957): \$36.50, per \$1,000.
Bonded debt (1957): \$34,047,500.
Revenue (1957): \$21,946,304.
Expenditure (1957): \$21,946,304.

* In viewing area.

ATLANTA, GA.

Incorporated as city: 1847.
Mayor: William B. Hartsfield (to Jan 1962).
1940 population & (rank): 302,288 (28).
1950 population & (rank): 331,314 (33).
1958 estimated population: 507,600.

1940-50 population change: +9.6%.

1958 area: 126.0 sq. mi.

Altitude: Highest, 1,050 ft.; lowest, 940.

Location: In NW central part of state, near Chattahoochee River.

Counties: In Fulton and De Kalb Cos.; seat of Fulton Co.

Churches: For whites, more than 352; for Negroes, more than 270.

City-owned parks and parkways: 146 (2,350 ac.).

Telephones (1957): 349,989.

Families with radios (1956): 220,400.

Television sets (1956): 186,200.

Radio stations: AM, 13; FM, 5.

Television stations: 3.

Assessed valuation (1958): \$938,288,949.

City tax rate (1958): \$25 per \$1,000.

Bonded debt (1957): \$61,761,328.

Revenue (1957): \$27,000,622.*

Expenditure (1957): \$39,779,574.

* Does not include \$2,326,124 brought forward from 1956.

BALTIMORE, MD.

Incorporated as city: 1797.

Mayor: Thomas D'Alesandro, Jr. (to May 1959).

1940 population & (rank): 859,100 (7).

1950 population & (rank): 949,708 (6).

1940-50 population change: +10.5%.

1940 area: Land, 78.7 sq. mi.; inland water, 6.9.

Altitude: Highest, 490 ft.; lowest, sea level.

Location: On Patapsco River, about 12 mi. from Chesapeake Bay.

County: Independent city.

Churches: Roman Catholic, 72; Jewish, 57; Protestant and other, 482 (150 colored).

City-owned parks: 148 park areas and tracts (6,000 ac.).

Telephone subscribers (Jan. 31, 1958): 234,317.

Radio stations: AM, 8; FM, 3.

Television stations: 3.

Assessed valuation (1958): \$3,604,409,008.

City tax rate (1958): \$2.98 per \$100.

Net bonded debt (Jan. 1, 1958): \$269,843,396.

Revenue (1957 budget): \$176,343,008.

Expenditure (1957 budget): \$165,094,869.

BIRMINGHAM, ALA.

Incorporated as city: 1871.

Mayor: James W. Morgan (to Nov. 1961).

1940 population & (rank): 267,583 (35).

1950 population & (rank): 326,037 (34).

1940-50 population change: +21.8%.

1958 estimated population: 366,000.

1955 land area: 66.88 sq. mi.

Altitude: Highest, 1,052 ft.; lowest, 565.

Location: In N central part of state.

County: Seat of Jefferson Co.

Churches: Protestant, 491; Roman Catholic, 26; Jewish, 3.

TOLEDO, OHIO

Incorporated as city: 1837.
Mayor: John W. Yager (to Dec. 1959).
City Manager: Russell W. Rink (apptd. Feb. 1957).
1940 population & (rank): 282,340 (34).
1950 population & (rank): 303,616 (36).
1940-50 population change: +7.5%.
1957 land area: 43.5 sq. mi.
Altitude: 587 ft.
Location: In NW part of state, on Maumee River at Lake Erie.
County: Seat of Lucas Co.
Churches: Protestant, 258; Roman Catholic, 37; Jewish, 5.
City-owned parks & playgrounds: 52 (2,197 ac.).
Telephones (1958): 200,694.
Radio sets (1954): 95,420.
Television sets (1954): 107,100.
Radio stations: AM, 4; FM, 3.
Television stations: 1.
Assessed valuation (1957): \$836,290,010.
City tax rate (1958): \$25.30 per \$1,000.
Bonded debt: All offset by trust fund.
Revenue (1957): \$31,774,465.
Expenditure (1957): \$27,512,333.

WASHINGTON, D. C.

See District of Columbia in index.

WORCESTER, MASS.

Incorporated as town: 1722.
Incorporated as city: 1848.
Mayor: James D. O'Brien (to Jan. 1960).
City Manager: Francis J. McGrath (apptd. Apr. 1951).
1940 population & (rank): 193,694 (44).
1950 population & (rank): 203,486 (50).
1940-50 population change: +5.1%.
1955 population: 202,612.
1950 land area: 37.0 sq. mi.
Altitude: Highest, 1,051 ft.; lowest, 359 ft.
Location: In central part of state.
County: Seat of Worcester Co.
Churches: Protestant, 85; Roman Catholic, 30; Jewish, 10.
City-owned parks: 52 (1,319 ac.).
Telephones (1955): 82,782.
Radio sets (1955): 137,453.
Television sets (1955): 54,981.
Radio stations (1955): AM, 4; FM, 1.
Television stations (1955): 1.
Assessed valuation (1957): \$347,774,950.
City tax rate (1957): \$64.80 per \$1,000.
Bonded debt (Dec. 31, 1957): \$24,393,000.
Revenue (1957): \$43,518,531.
Expenditure (1957): \$43,518,531.

NOTE: Births are adjusted for underregistration. Figures are shown to the last digit as computed for convenience in summation. They are not assumed to be accurate to the last digit. Figures for age of mother not stated are distributed. Rates are live births per 1,000 female population in each specified group, enumerated as of April 1 for 1940 and 1950, and estimated as of July 1 for 1943-49 and 1951-56. Figures for age of mother not stated are distributed. ¹ Rates computed by relating total births, regardless of age of mother, to female population aged 14-44 years. ² Rates computed by relating births to mothers under 15 years, to female population aged 10-14. ³ Rates computed by relating births to mothers 45 years and over, to female population aged 45-49 years. ⁴ 1951-54 and 1956 based on a 50% sample.

¹ Rates per 1,000 live births. ² Less than .05. ³ 1922-24. ⁴ Not available. NOTE: Rates per 100,000 population. The figures beginning with 1940 relate to the total United States; for earlier periods the figures relate to the Death Registration States. The death rates for 1950 are shown on the basis of both the Fifth and the Sixth Revisions of the International List of Causes of Death. Because of radical changes from the Fifth to the Sixth Revision, the death rates are not strictly comparable. Death rates for 1957 are based upon the Sixth Revision.

Death Rates by Marital Status, Age, and Sex; U. S., Annual Average for 1949-51

* The proportion of deaths allocated to fixed-object collisions and noncollision accidents is different from that reported by most states. State reports generally indicate that many accidents involving no collision on the roadway are classified as fixed-object collisions because the motor vehicle collides with an object after leaving the roadway.

† The totals do not quite equal the sum of the various types because the estimates were generally made only to the nearest 10 deaths, and to the nearest 50 deaths for certain types.

Motor-Vehicle Traffic Deaths by States, 1956-57

Methods of Execution in the United States

Source: Information Please Almanac questionnaires to the states.

State	Method	State	Method
Alabama	Electrocution	New Mexico	Lethal gas
Arizona	Lethal gas	New York	Electrocution
Arkansas	Electrocution	North Carolina	Lethal gas
California	Lethal gas	North Dakota	No death penalty
Colorado	Lethal gas	Ohio	Electrocution
Connecticut	Electrocution	Oklahoma	Lethal gas ¹
Delaware	No death penalty	Oregon	Lethal gas ²
D. C.	Electrocution	Pennsylvania	Electrocution
Florida	Electrocution	Rhode Island	No death penalty ⁵
Georgia	Electrocution	South Carolina	Electrocution
Idaho	Hanging	South Dakota	Electrocution
Illinois	Electrocution	Tennessee	Electrocution
Indiana	Electrocution	Texas	Electrocution
Iowa	Hanging	Utah	Hanging
Kansas	Hanging		or shooting ³
Kentucky	Electrocution	Vermont	Electrocution
Louisiana	Electrocution	Virginia	Electrocution
Maine	No death penalty	Washington	Hanging
Maryland	Lethal gas	West Virginia	Electrocution
Massachusetts	Electrocution	Wisconsin	No death penalty
Michigan	No death penalty	Wyoming	Lethal gas
Minnesota	No death penalty	U. S. (Fed. Gov't.) ..	(⁴)
Mississippi	Lethal gas	Alaska	No death penalty
Missouri	Lethal gas	American Samoa	Hanging
Montana	Hanging	Canal Zone	Hanging
Nebraska	Electrocution	Guam	Hanging
Nevada	Lethal gas	Hawaii	No death penalty
New Hampshire	Hanging	Puerto Rico	No death penalty
New Jersey	Electrocution	Virgin Islands	Hanging

¹ Electrocution until gas chamber is provided. ² A measure to abolish death sentence will be voted on in the next general election. ³ Condemned man has choice. ⁴ Method shall be that used by state in which sentence is imposed. If state does not have death penalty, Federal judge shall prescribe method for carrying out death sentence. ⁵ However, a person who commits murder while under sentence of imprisonment for life shall be hanged. NOTE: Method shown with each state is maximum penalty for murder and certain other crimes. In most states having capital punishment, jury or judge can specify whether sentence shall be death or life imprisonment.

EDUCATION

Elementary and Secondary Public School Statistics, 1956-57

Source: Information Please Almanac Questionnaire.

Note: The number of schools includes rural and one-room school houses. The number of pupils includes only full-time students. The average yearly expenditure is based on average daily attendance.

B.L. Bachelor of Letters	Med.Sc.D. Doctor of Medical Science
B.L.S. Bachelor of Library Science	M.Eng. Mining Engineer
B.Litt. Bachelor of Literature	M.F. Master of Forestry
B.Med. Bachelor of Medicine	M.F.A. Master of Fine Arts
B.Mus. Bachelor of Music	M.Int.Med. Master of Internal Medicine
B.N. Bachelor of Nursing	M.L.S. Master of Library Science
B.Pharm. Bachelor of Pharmacy	M.M. Master of Music
B.Ph. Bachelor of Philosophy	M.M.E. Master of Mechanical Engineering or Master of Music Education
B.R.E. Bachelor of Religious Education	M.Mus. Master of Music
B.S. Bachelor of Science	M.N. Master of Nursing
B.Th. Bachelor of Theology	M.P.A. Master of Public Administration
C.E. Civil Engineer	M.P.H. Master of Public Health
Chem.E. Chemical Engineer	M.R.E. Master of Religious Education
D.C.E. Doctor of Civil Engineering	M.S. Master of Science
D.C.S. Doctor of Commercial Science	M.S.W. Master of Social Work
D.D. Doctor of Divinity	M.Th. Master of Theology
D.D.S. Doctor of Dental Surgery	O.D. Doctor of Optometry
D.M.D. Doctor of Dental Medicine	Phar.D. Doctor of Pharmacy
D.O. Doctor of Osteopathy	Ph.C. Pharmaceutical Chemist
D.M.S. Doctor of Medical Science	Ph.D. Doctor of Philosophy
D.P.A. Doctor of Public Administration	Ph.G. Graduate in Pharmacy
D.P.H. Doctor of Public Health	Ph.M. Master of Philosophy
D.R.E. Doctor of Religious Education	Sc.D. Doctor of Science
D.S.W. Doctor of Social Welfare	S.J.D. Doctor of Juridical Science
D.V.M. Doctor of Veterinary Medicine	S.Sc.D. Doctor of Social Science
Ed.D. Doctor of Education	S.T.B. Bachelor of Sacred Theology
E.E. Electrical Engineer	S.T.D. Doctor of Sacred Theology
E.M. Engineer of Mines	S.T.M. Master of Sacred Theology

Academic Costume: Colors Associated with Fields

Agriculture	Maize	Library Science	Lemon
Arts and Letters	White	Medicine	Green
Commerce & Accountancy	Drab	Music	Pink
Dentistry	Lilac	Oratory	Silver gray
Economics	Copper	Pharmacy	Olive green
Education	Light blue	Philosophy	Dark blue
Engineering	Orange	Physical Education	Sage green
Fine Arts, Architecture	Brown	Public Health	Salmon pink
Forestry	Russet	Science	Golden yellow
Humanics	Crimson	Theology	Scarlet
Law	Purple	Veterinary Science	Gray

Accredited U. S. Colleges and Universities

Spring Semester, 1958

Only schools fully accredited by at least one of the six regional accrediting associations are listed. The number of students is for matriculated undergraduate and graduate students who are working for a degree.

Institution, location and (date founded)	Chief executive ¹	Students ²	Control ³
Abilene Christian College; Abilene, Tex. (1906).....	Don H. Morris.....	2,204 C	Ch. of Christ ⁴
Adams State College; Alamosa, Colo. (1921).....	Fred J. Plachy.....	823 C	State
Adelphi College; Garden City, N. Y. (1856).....	Paul D. Eddy.....	3,774 C	Private
Agnes Scott College; Decatur, Ga. (1889).....	Wallace M. Alston.....	594 F	Presbyterian ⁴
Akron, University of; Akron, Ohio (1870).....	Norman P. Auburn.....	4,178 C	City
Alabama, University of; University, Ala. (1831).....	Frank A. Rose.....	12,151 C	State
Alabama A & M College; Normal, Ala. (1875).....	J. F. Drake.....	1,050 C	State
Alabama College; Montevallo, Ala. (1856).....	Howard M. Phillips.....	722 C	State
Alabama Polytechnic Institute; Auburn, Ala. (1872).....	Ralph B. Draughon.....	7,791 C	State
Alabama State Teachers College; Florence, Ala. (1872).....	E. B. Norton.....	1,748 C	State

¹ President, unless otherwise indicated.

² M—Male; F—Female; C—Coeducational; Co—Co-ordinate.

³ Control, unless otherwise indicated.

⁴ Affiliated but not controlled.

⁵ Enrollment includes women who are admitted for special courses and/or graduate work.

⁶ Enrollment includes men who are admitted for special courses and/or graduate work.

⁷ Spring 1957.

⁸ Formerly named Eastern Illinois State College.

⁹ Subsidized in part by the Dept. of Health, Education and Welfare through the Office of Vocational Rehabilitation.

¹⁰ Rector.

¹¹ Chancellor.

¹² Dean.

¹³ Managing Director.

¹⁴ Acting President.

¹⁵ Interim President.

¹⁶ Acting Chancellor.

¹⁷ Provost.

¹⁸ Director.

¹⁹ Acting Director.

²⁰ Acting Dean.

²¹ Superintendent.

²² Dean of the Faculty.

²³ Chairman, Administrative Committee.

²⁴ Includes New York State College of Ceramics, a contract unit of the State University of New York and an integral part of Alfred University.

²⁵ With public support.

²⁶ Jewish-sponsored; non-sectarian program.

²⁷ Pembroke College is the undergraduate school for women of Brown University.

²⁸ Duplicates deducted.

²⁹ Including Hastings College of the Law.

³⁰ Acting Provost.

³¹ Also campuses at San Dimas and Pomona.

³² Affiliated with Congregational, Baptist and Episcopal churches.

³³ Formerly Colorado A & M College.

³⁴ Formerly Wisconsin State College; made a division of the University of Wisconsin in 1956.

³⁵ Cornell University also operates the New York State Agricultural Experiment Station in Geneva, N. Y., and the Cornell Aeronautical Laboratory in Buffalo, N. Y.

³⁶ Rutgers College is for men only; Douglass College, formerly New Jersey State College for Women, is for women only; campuses at Newark and Camden are coeducational.

³⁷ Quasi-public in control.

³⁸ Fontbonne, Maryville and Webster Colleges are corporate colleges of St. Louis University.

³⁹ Hobart College is for men; William Smith College is for women.

⁴⁰ Legally public; administered and financed privately.

⁴¹ Formerly Polytechnic Institute of Puerto Rico.

⁴² Jackson College is Dept. of Women (Lib. Arts) for Tufts University.

⁴³ Teachers Institute and Seminary College are coeducational; Rabbinical School and Cantors Institute are male only.

⁴⁴ College is independent; theological seminary has Presbyterian affiliation.

⁴⁵ Coeducational in evening; men only during day.

⁴⁶ Mary Washington College is the constituent women's college of the University of Virginia.

⁴⁷ Professional schools located at Baltimore; Maryland State College located at Princess Anne.

⁴⁸ A division of the University of Maryland.

⁴⁹ Branch campus at Sault Ste. Marie, Mich.

⁵⁰ Formerly Michigan State College.

⁵¹ A branch of University of Minnesota at Minneapolis.

⁵² There are also campuses at St. Paul and Duluth.

⁵³ New Church (Swedenborgian).

⁵⁴ Female only at Park Ave. bldg.; coeducational at Bronx bldg.

⁵⁵ State support for teacher education.

⁵⁶ President, on leave.

⁵⁷ Newcomb College is constituent school for women of Tulane University.

⁵⁸ Year of consolidation.

⁵⁹ Maintained by individual Christian Scientists for sons and daughters of Christian Scientists.

⁶⁰ Affiliated with Harvard University.

⁶¹ Radford College is the women's division of Virginia Polytechnic Institute.

⁶² Affiliated with Methodist, Congregational and Presbyterian Churches.

⁶³ Formerly St. Paul's Polytechnic Institute.

⁶⁴ Snow College and College of Southern Utah are branches of Utah State Agricultural College.

⁶⁵ Until July 1, 1957.

⁶⁶ Includes Utica College, Utica, N. Y.

⁶⁷ Other campuses are located at El Paso, Galveston, Houston and Dallas.

⁶⁸ Does not include enrollment of Texas Western College at El Paso. See that entry.

⁶⁹ Part of University of Texas.

⁷⁰ President of Union College and Chancellor of Union University.

⁷¹ Control passing from City to State over 3-year period which began July 1, 1956.

⁷² Administrator.

⁷³ Formerly Oklahoma Agricultural and Mechanical College.

⁷⁴ Permanent site, now under construction, will be 7 mi. N of Colorado Springs.

⁷⁵ Coordinated in a measure with St. Benedict's College.

⁷⁶ Vice President.

⁷⁷ Formerly Texas State College for Women.

⁷⁸ Spring 1956.

⁷⁹ Other campuses at Teaneck and Florham Park, N. J.

⁸⁰ Fall 1957.

⁸¹ Fall 1955.

⁸² Winter 1957-58.

GEOGRAPHY

Miscellaneous Data

Source: U. S. Geological Survey.

Highest point: Mount McKinley, Alaska	20,320 ft.
Lowest point: Death Valley, Calif.	282 ft. below sea level
Most northern point: Pt. Barrow, Alaska	71° 23' 30" N. lat.
Most southern point: Cape Sable, Fla.	25° 07' N. lat.
Most eastern point: West Quoddy Head, Maine	66° 57' W. long.
Most western point: Attu Island, Alaska	172° 27' E. long.
Places farthest apart: Attu, Alaska, to Key Largo, Florida	5,509 mi.
Geographic center: Two Top Peak, South Dakota	$\left\{ \begin{array}{l} 44^{\circ} 58' \text{ N. lat.} \\ 103^{\circ} 38' \text{ W. long.} \end{array} \right.$
Northern boundary: Canada and Great Lakes	3,987 mi.
Southern boundary: Mexico	2,013 mi.

* Mountains whose summits are on the international boundary between Canada and Alaska.

The Continental Divide

The Continental Divide is a ridge of high ground which runs irregularly north and south through the Rocky Mountains and separates eastward-flowing from westward-

flowing streams. The waters which flow eastward empty into the Atlantic Ocean, chiefly by way of the Gulf of Mexico; those which flow westward empty into the Pacific.

Forest Resources of the United States

Source: U. S. Forest Service.

Nearly 1/3 of the U. S. is forest land including over 800 different kinds of trees. Commercial areas include land capable of producing timber of commercial quantity and quality, and available now or prospectively for such use. Almost all the old-growth forest is in the West. Noncommercial areas include alpine, semidesert, chaparral and other forest types of low timber productivity, though much of it is important for watershed protection.

U. S. Forest Land in Acres, 1953

Old growth	48,055,000
Young growth saw timber ...	132,561,000
Pole timber stands	169,408,000
Seedling and sapling stands .	94,709,000
Nonstocked and other areas .	41,607,000
Total, commercial forest land	484,340,000
Noncommercial forest	163,346,000
Total, all forest land	647,686,000

Rivers of the U. S.

Source: U. S. Geological Survey.

(300 or more miles long)

ALABAMA (315 mi.): From junction of Tallapoosa R. and Coosa R. in Alabama to junction with Tombigbee R. to form Mobile R. and Tensaw R.

ALLEGHENY (325 mi.): From Potter Co. in Pennsylvania to junction with Monongahela R. at Pittsburgh to form Ohio R.

ALTAMAHA-OCMULGEE (392 mi.): From junction of Yellow R. and South R., Newton Co. in Ga. to Atlantic Ocean.

APALACHICOLA-CHATTAHOOCHEE (500 mi.): From Towns Co. in Ga. to Gulf of Mexico in Fla.

ARKANSAS (1,450 mi.): From Lake Co. in Colorado to Mississippi R. in Arkansas.

BIG BLACK (330 mi.): From Webster Co. in Mississippi to Mississippi R.

BIG HORN (336 mi.): From junction of Popo Agie R. and Wind R. in Wyoming to Yellowstone R. in Montana.

BRAZOS (870 mi.): From junction of Salt Fork and Double Mountain Fork in Texas to Gulf of Mexico.

CANADIAN (906 mi.): From Colfax Co. in New Mexico to Arkansas R. in Oklahoma.

CEDAR (329 mi.): From south central Minnesota to Iowa R. in Iowa.

CIMARRON (600 mi.): From Colfax Co. in New Mexico to Arkansas R. in Okla.

CLARK FORK-PEND OREILLE (505 mi.): From Silver Bow Co. in Mont. to Columbia R. in British Columbia.

COLORADO (1,440 mi.): From Grand Co. in Colorado to Gulf of California.

COLORADO (840 mi.): From Dawson Co. in Texas to Matagorda Bay.

COLUMBIA (1,214 mi.): From Columbia Lake in British Columbia to Pacific Ocean between Oregon and Washington.

CONNECTICUT (407 mi.): From Connecticut Lakes in New Hampshire to Long Island Sound in Connecticut.

CUMBERLAND (687 mi.): From junction of forks in Harlan Co. in Kentucky to Ohio R.

DAKOTA (Sometimes called JAMES) (710 mi.): From Wells Co. in North Dakota to Missouri R. in South Dakota.

DES MOINES (327 mi.): From Humboldt Co. in Iowa to Mississippi R.

GILA (630 mi.): From southwest New Mexico to Colorado R. in Arizona.

GREEN (360 mi.): From Lincoln Co. in Kentucky to Ohio R. in Indiana.

GREEN (730 mi.): From Sublette Co. in Wyoming to Colorado R. in Utah.

HUDSON (306 mi.): From Essex Co. in New York to Upper New York Bay between New York and New Jersey.

JAMES (710 mi.): From Wells County in North Dakota to Missouri R.

JAMES (340 mi.): From junction of Jackson R. and Cowpasture R. in Virginia to Chesapeake Bay.

KANAWHA-NEW (352 mi.): From junction of North and South Forks of New R. in North Carolina to Ohio R.

LITTLE COLORADO (300 mi.): From Apache Co. in Arizona to Colorado R.

LITTLE MISSOURI (560 mi.): From northeast Wyoming to Missouri R. in North Dakota.

MILK (625 mi.): From junction of forks in Alberta to Missouri R.

MINNESOTA (332 mi.): From Big Stone Lake between Minnesota and South Dakota to Mississippi R. at St. Paul.

MISSISSIPPI (2,330 mi.): From Lake Itasca in Minn. to head of Passes in La.

MISSOURI (2,466 mi.): From junction of Jefferson R., Madison R., and Gallatin R. in Montana to Mississippi R. near St. Louis.

MOBILE-ALABAMA-COOSA (639 mi.): From junction of Etowah R. and Oostanaula R. in Georgia to Mobile Bay.

NEOSHO (460 mi.): From Morris Co. in Kansas to Arkansas R. in Oklahoma.

NIOBRARA (431 mi.): From Niobrara Co. in Wyoming to Missouri R. in Nebraska.

NORTH CANADIAN (760 mi.): From Union Co. in New Mexico to Canadian R. in Oklahoma.

NORTH PLATTE (618 mi.): From Jackson Co. in Colorado to junction with So. Platte R. in Nebraska to form Platte R.

NUECES (338 mi.): From near Edwards-Real Co. border in Texas to Nueces Bay.

OHIO (981 mi.): From junction of Allegheny R. and Monongahela R. at Pittsburgh to Mississippi R. between Illinois and Kentucky.

OSAGE (500 mi.): From junction of Elm Creek and Onion Creek in Kansas to Missouri R. in Missouri.

OUACHITA (605 mi.): From Polk Co. in Arkansas to Red R. in Louisiana.

PEARL (490 mi.): From Neshoba Co. in Mississippi to Gulf of Mexico between Mississippi and Louisiana.

PECOS (735 mi.): From Mora Co. in New Mexico to Rio Grande in Texas.

PEE DEE-YADKIN (435 mi.): From Watauga Co. in N. C. to Winyah Bay in S. C.

PLATTE (310 mi.): From junction of North Platte R. and South Platte R. in Nebraska to Missouri below Omaha.

POWDER (375 mi.): From junction of forks in Johnson Co. in Wyoming to Yellowstone R. in Montana.

RED (1,018 mi.): From junction of forks in Tillman Co. in Oklahoma to Mississippi R. in Louisiana.

RED (Sometimes called **RED RIVER OF THE NORTH**) (545 mi.): From junction of Otter Tail R. and Bois de Sioux R. in Minnesota to Lake Winnipeg in Manitoba.

REPUBLICAN (445 mi.): From junction of North Fork and Arikaree R. in Nebraska to junction with Smoky Hill R. in Kansas to form Kansas R.

RIO GRANDE (1,885 mi.): From San Juan Co. in Colorado to Gulf of Mexico.

ROANOKE (380 mi.): From junction of forks in Montgomery Co. in Virginia to Albemarle Sound in North Carolina.

ROCK (300 mi.): From Washington Co. in Wisconsin to Mississippi R. in Illinois.

SABINE (380 mi.): From junction of forks in Hunt Co. in Texas to Sabine Lake between Texas and Louisiana.

SACRAMENTO (382 mi.): From Siskiyou Co. in California to Suisun Bay.

SAINT FRANCIS (425 mi.): From Iron Co. in Missouri to Mississippi R. in Ark.

SALMON (420 mi.): From Custer Co. in Idaho to Snake R.

SAN JOAQUIN (350 mi.): From junction of forks in Madera Co. in California to Suisun Bay.

SAN JUAN (360 mi.): From Archuleta Co. in Colorado to Colorado R. in Utah.

SANTEE-WATEREE-CATAWBA (538 mi.): From McDowell Co. in N. C. to Atlantic Ocean in S. C.

SAVANNAH (314 mi.): From junction of Tugaloo R. and Seneca R. in South Carolina to Atlantic Ocean between Georgia and South Carolina.

SMOKY HILL (540 mi.): From Cheyenne Co. in Colorado to junction with Republican R. in Kansas to form Kansas R.

SNAKE (1,038 mi.): From Ocean Plateau in Wyoming to Columbia R. in Wash.

SOUTH PLATTE (424 mi.): From Park Co. in Colorado to junction with North Platte R. in Nebraska to form Platte R.

SUSQUEHANNA (444 mi.): From Otsego Co. in New York to Chesapeake Bay in Maryland.

TALLAHATCHIE (301 mi.): From Tippah Co. in Mississippi to junction with Yalobusha R. to form Yazoo R.

TENNESSEE (652 mi.): From junction of Holston R. and French Broad R. near Knoxville to Ohio R. in Kentucky.

TOMBIGBEE (409 mi.): From junction of forks near Amory, Mississippi, to junction with Alabama R. in Alabama to form Mobile R. and Tensaw R.

TRINITY (360): From junction of forks in Kaufman Co. in Texas to Galveston Bay.

WABASH (475 mi.): From Darke Co. in Ohio to Ohio R. between Ill. and Ind.

WASHITA (500 mi.): From Hemphill Co. in Texas to Red R. in Oklahoma.

WHITE (690 mi.): From Madison Co. in Arkansas to Mississippi R.

WISCONSIN (430 mi.): From Vilas Co. in Wisconsin to Mississippi R.

YELLOWSTONE (671 mi.): From Park Co. in Wyoming to Missouri R. in N. Dak.

WEATHER AND CLIMATE

Devastating North Atlantic Hurricanes of the 20th Century

The following is a selected list of North Atlantic hurricanes based on casualties, damage and general public interest. Facts about each storm are taken from Weather Bureau records, although in some cases only estimates of wind speed are available. Data given in this list pertain only to U. S. land areas except where indicated otherwise.

Date	Areas hardest hit	Land stations with highest wind speed	Deaths (U. S. only)	Est. damage (millions)	Remarks
1900, Sept. 8.....	Galveston, Tex.	Galveston, Tex. (120* mph)	6,000	\$ 20	Damage due to both winds and storm wave. Galveston Is. inundated.
1909, Sept. 10-12....	La.; Miss.	New Orleans, La. (68 mph)	350	5	Winds 50-75 mi. W of New Orleans, where deaths occurred, were much stronger than 68 mph.
1915, Aug. 5-24.....	East Tex.; La.	Galveston, Tex. (120 mph)	275	50	Water 5-6 ft. deep in Galveston business district. 90% of homes demolished. Warnings issued well ahead of time.
1915, Sept. 22-Oct. 2..	Mid-Gulf Coast	Burrwood, La. (140 mph)	275	13	Many casualties due to persons insisting on staying in low-lying areas despite warnings.
1919, Sept. 2-14.....	Fla.; La.; Tex.	Sand Key, Fla. (84† mph)	284	22	488 persons drowned at sea.
1926, Sept. 6-22.....	Fla.; Ala.	Miami Beach, Fla. (132 mph)	100	105	Most deaths were in Miami area. Said to have been one of most destructive storms of century.
1928, Sept. 6-20.....	Southern Fla.	Lake Okeechobee, Fla. (75† mph)	1,836	25	1,870 injured. Nearly all deaths were in Lake Okeechobee area. Winds estimated as high as 160 mph caused Lake to overflow into populated areas.
1935, Aug. 31-Sept. 8.	Southern Fla.	Tampa, Fla. (75 mph)	376	6	Sustained winds over Florida Keys est. 150-200 mph. Remembered as "Labor Day Storm," one of most violent on record.
1935, Oct. 30-Nov. 8...	Southern Fla.	Miami, Fla. (75 mph)	5	6	Called "The Yankee Storm" because it moved in from N. E. It was of small diameter and its wind covered only narrow band.
1938, Sept. 16-22.....	Long Island, N. Y. Southern New Eng.	Blue Hills Obs., Mass. (186 mph)	600	250	Unusually destructive. Storm center moved as fast as 56 mph at times. 1,754 injured. Damage est. as high as \$330 million.
1940, Aug. 5-15.....	Ga.; S. C.; N. C.	Savannah, Ga. (73 mph)	50	3	30 of deaths were due to disastrous flooding inland as far west as Tennessee.
1944, Sept. 8-16.....	N. C. to New England	Cape Henry, Va. (134 mph)	46	100	344 deaths at sea. Shipping lanes were crowded with war-time activity.
1944, Oct. 13-21.....	Fla. to Carolinas	Dry Tortugas Is. (120 mph)	18	100	About 300 were killed in Cuba area before storm reached U. S. Evacuation of thousands from threatened areas in Fla. prevented higher toll.
1945, Aug. 24-29.....	Texas	Seadrift, Tex. (135 mph)	3	20	Several other coastal localities recorded 135 mph. One of most intense hurricanes in Texas.
1945, Sept. 11-19.....	Fla.; Ga.; S. C.	Carysfort Reef Light, Fla. (138 mph)	4	60	22 casualties in Bahamas. Damage mostly in Dade Co., Fla. Evacuation of 50,000 persons

Date	Areas hardest hit	Land stations with highest wind speed	Deaths (U. S. only)	Est. damage (millions)	Remarks
1947, Sept. 10-19.....	Fla.; Mid-Gulf Coast	Hillsboro Light, Fla. (155 mph)	51	110	Damage especially heavy along Gulf Coast. Onshore winds resulted in high water.
1949, Aug. 23-29.....	Fla. to Carolinas	Jupiter, Fla. (153 mph)	2	52	Center of storm crossed Lake Okeechobee. Levees held back water, which rose 12 ft. (Compare casualties with 1928.)
1950, Oct. 15-19.....	Florida	Miami, Fla. (122 mph)	4	28	"KING"—small but violent storm. Struck Miami, then moved up Florida peninsula.
1954, Aug. 26-31.....	N. C. to Maine	Block Island, R. I. (135 mph)	60	461	"CAROL"—more damage than any other single storm on record for U. S. Water and high waves flooded low-lying areas 1,000 injuries in Long Island-New England area.
1954, Sept. 6-11.....	N. J. to Maine	Blue Hill Obs., Mass. (101 mph)	21	43	"EDNA"—wind est. up to 135 mph at Massachusetts Bay.
1954, Oct. 5-16.....	S. C. to N. Y.	(See Remarks)	95	252	"HAZEL"—several N. C. localities had winds of 130-150 mph with unusually heavy wave damage resulting. Est. 400-1,000 casualties in Haiti. In Canada there were 78 deaths, mostly due to flooding.
1955, Aug. 11-13.....	N. C. to Pa. and N. Y.	Ft. Macon, N. C. (100 mph)	25	46	"CONNIE"—center passed over Morehead City and Beaufort flooding these cities. 12.35 in. of rain in New York City.
1955, Aug. 17-19.....	N. C. to New England	Wilmington, N. C. (74 mph)	184	832	"DIANE"—worst floods in history in Southern New England. 16 in. of rain in Hartford area.
1955, Sept. 19-20.....	North Carolina	Beaufort, N. C. (120* mph)	7	88	"IONE"—center passed over Morehead City and Beaufort but lost force rapidly thereafter. Recurved to sea south of Norfolk.
1956, Sept. 24-26.....	Northwest Florida	Burrwood, La. (84 mph)	15	25	"FLOSSY"—center passed in northeasterly direction over Burrwood, La., at 4 a.m. and over Pensacola, Fla., at 3 p.m. on Sept. 24. Lost force rapidly thereafter, but dumped heavy rains in southeastern states.
1957, June 26-28.....	Southwest Texas and Southwest Louisiana	Lake Charles, La. (97 mph)	390	150	"AUDREY"—gave an early start to the hurricane season and wiped out Cameron, La. Two weeks later "BERTHA," a less destructive tropical storm, struck in exactly the same area.

* Estimated. † Wind measuring equipment disabled at speed indicated.

Patents

Source: Patent Office.

A patent, in the most general sense, is a document issued by a government, conferring some special right or privilege. The term is now restricted mainly to patents for inventions; occasionally, land patents.

The grant of a patent for an invention gives the inventor the privilege, for a limited period of time, of excluding others from practicing a certain art or from making, using, or selling a certain article. However, it does not give him the right to make, use, or sell his own invention if it is an improvement on some unexpired patent whose claims are infringed thereby.

In the U. S., the law provides that a patent may be granted, for a term of 17 years, to any person who has invented or discovered any new and useful art, machine, manufacture, or composition of matter, as well as any new and useful improvements thereof. A patent may also be granted to a person who has invented or discovered and asexually reproduced a new and distinct variety of plant (other than a tuber-propagated one) or has invented a new, original and ornamental design for an article of manufacture.

A patent is granted only upon a regularly

filed application, complete in all respects; upon payment of the fees; and upon determination that the disclosure is complete and that the invention is new and useful. The disclosure must be of such nature as to enable others to reproduce the invention.

A complete application, which must be addressed to the Commissioner of Patents, Washington, D. C., consists of a petition, specification and claims, oath, drawing (whenever the nature of the case admits of it) and a filing fee of \$30 for cases having 20 claims or less. An additional fee of \$1 per claim is required for cases having more than 20 claims. The filing fee is not returned to the applicant if the patent is refused. If the patent is allowed, another fee of \$30 (and \$1 each for claims allowed in excess of 20) is required before the patent is issued. The fees for design patents vary.

Applications are considered in the order in which they are received. Patents are not granted for printed matter, for methods of doing business or for devices for which claims contrary to natural laws are made. Applications for a perpetual-motion machine have been made from time to time, but until a working model is presented that actually fulfills the claim, no patent will be issued.

Trademarks

Source: Patent Office.

A trademark may be defined as a word, letter, device or symbol, as well as some combination of these, which is used in connection with merchandise and which points distinctly to the origin or ownership of it.

Certificates of registration of trademarks are issued under the seal of the Patent Office and may be registered by the owner if he is engaged in interstate or foreign commerce, since any Federal jurisdiction over trademarks arises under the commerce clause of the Constitution. Trademarks may be registered by foreign owners who comply with our law, as well as by citizens of foreign countries with which the U. S. has treaties relating to trademarks. American citizens may register trademarks in foreign

countries by complying with the laws of those countries. The right to registration and protection of trademarks in many foreign countries is guaranteed by treaties.

General jurisdiction in trademark cases is given to the Federal courts. Decisions of examiners on applications or oppositions are subject to appeal to the Trademark Trial and Appeal Board and from it to the U. S. Court of Customs and Patent Appeals. Before adopting a trademark, a person should make a search of prior marks in order to avoid infringing unwittingly upon them.

The duration of a trademark registration is 20 years, but it may be renewed indefinitely for 20-year periods, provided the trademark is still in use at the time of expiration.

Copyrights

Source: Copyright Office.

A copyright is a statutory right obtained by authors, musicians and artists or their assigns, upon compliance with the provisions of the copyright law, to prevent the reproduction of their works without their consent. The U. S. Constitution (Article I, Section 8) empowers Congress "to promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The copyright owner possesses the exclusive right to print, reprint, publish, copy and vend the copyrighted work. Among some of the other rights possessed by the copyright owner are the exclusive rights to translate and dramatize literary works, to control public performance of dramas, and, in the case of nondramatic literary works and musical compositions, to control public performance for profit. Special provisions in regard to mechanical reproductions of musical compositions are included. Copyright protection extends to books; pamphlets; periodicals and contributions to periodicals; lectures, sermons, and monologues; dramas and dramatico-musical compositions; musical compositions; maps; works of art or models and designs for works of art; reproductions of a work of art; drawings or plastic works of scientific or technical character; photographs; prints, and pictorial illustrations; commercial prints and labels; and motion pictures.

Copyright term endures 28 years from date of registration in the Copyright Office for unpublished material and from the date of publication for published works. The copyright may be renewed for an additional period of 28 years, provided application for such renewal is made within one year prior to the date of expiration of the original term. The copyright of a book or similar publication is secured by publication of such work after printing on the title page, or the page immediately following, the required copyright notice. This notice consists of the word *Copyright*, the abbreviation *Copr.* or the symbol ©, the name of the copyright owner and the year date of publication. It is important to bear in mind that copyright comes into being at the time of first publication if this required notice appears on the work. If publication occurs without this notice, the work falls into the public domain, and the

Copyright Office cannot register the claim. In short, the Copyright Office does not grant copyrights; the obtaining of such protection depends on whether or not the claimant follows the statutory formalities at the time of publication. In view of the fact that those formalities vary with the different classes of works subject to copyright, persons interested in securing copyright should obtain circular No. 35 from the Register of Copyrights, Library of Congress, Washington 25, D. C.

The law requires that, promptly after the work has been published, two copies thereof (foreign works, one copy) must be promptly deposited in the Copyright Office. These copies should be accompanied by the proper application form and the statutory fee of \$4. If the work is a commercial print or label used with the sale or advertisement of an article of merchandise, the fee is \$6.

Effective June 3, 1949, the term of ad interim protection for books and periodicals in the English language first published abroad was extended to five years. Such works may be imported into the U. S. up to a total of 1,500 copies after ad interim registration has been obtained. The above amendment to the law also affords to the foreign author or publishers an option of obtaining registration without payment of the usual statutory fee if an extra copy of the work, accompanied by a catalogue card, is submitted to the Copyright Office within six months of first publication abroad.

The Act of Aug. 31, 1954, modified a number of existing formalities, primarily with regard to certain foreign works, and was designed to implement the Universal Copyright Convention, which took effect on Sept. 16, 1955. One principal modification is that U. S. authors and publishers may use the symbol © instead of the word *Copyright* or the abbreviation *Copr.* The symbol must be accompanied by the name of the copyright owner and the year date of publication. The use of this form may obtain automatic copyright protection in member countries of the Universal Copyright Convention.

Application forms, etc., may be obtained free from the Copyright Office. Bulletin 14, the U. S. copyright law, can be purchased from the Register of Copyrights for 25¢.

¹ A—reasonable and proper; B—55 mph on 4-lane highways; C—50 mph at night; D—45 mph at night; E—55 mph at night; F—parkways to 55 mph where marked; G—unless otherwise marked; H—60 mph at night; pf—prima facie limit; FML—fixed maximum limit. ² Applies to nonresidents. The term "reciprocal" means that the state will extend to a nonresident the identical privileges granted by his home state to nonresident motorists. In some states, visitors must register within a specified time. In most states, persons who intend to reside permanently must buy new plates and secure new driving license at once, or within a limited time. Acquisition of employment or placing children in public school is often considered intention to reside permanently. ³ Registry tax on first registration in state. ⁴ Visitor's permit required after 10 days. ⁵ Sales or use tax on new cars, first registration of used cars. ⁶ Bill of sale must be filed. ⁷ Three months before current registration expires. ⁸ State has compulsory insurance. ⁹ Visitors must register immediately. ¹⁰ Until home state license plates expire. ¹¹ Extension granted. ¹² \$80 maximum. ¹³ For automobiles; busses, 55 mph; large trucks, 45 mph. ¹⁴ State has "Unsatisfactory Judgment Fund" law. ¹⁵ Non-resident car must bear valid registration plates of place of residence of owner. ¹⁶ Unless otherwise posted, trucks and busses, 45 mph. ¹⁷ Passenger vehicles; trucks, 45 mph. ¹⁸ Not to exceed 6 months when employed in state. ¹⁹ At discretion of Secretary of State. ²⁰ 30 mph minimum limit on state highways. ²¹ Excise tax.
